GENESEE COUNTY, MI -- In a meeting of all the major stakeholders, the city of Flint is expected to make its case to the state Thursday that joining a regional effort to build a new pipeline from Lake

Huron is the best option for Flint's future water.

The meeting is expected to include representatives from Flint emergency financial manager Ed Kurtz's administration as well as the Genesee County Drain Commissioner's Office, Detroit Water and Sewerage Department and thr Michigan Treasury department, Flint officials said this week.

"The state is looking to bring all the parties to one place to look at the numbers," said Howard Croft, Flint's director of infrastructure. "All the pros and cons and all the people involved will be in the room."

Flint and Genesee County have been getting water from Detroit under a 30-year contract that is now expired, and are looking to break away because of continuing price increases.

Officials with the Flint emergency manager's office have been exploring several options for water since the city was taken over by the state in December. The options included treated Flint River water as well as blending Detroit water with Flint River water.

Now, Flint authorities say joining with Genesee County officials on building a new pipeline from Lake Huron is the best bet in order to stabilize Flint water rates over the long term.

The pipeline would service a wider region that could also include Lapeer, Sanilac County and Lapeer County, called the Karegnondi Water Authority.

"We're comfortable with the work we've done. We believe the numbers bear out," Croft said. "This is taking it to the next level, taking it to the state and saying these are our options."

Kurtz said that, under the emergency financial manager law, the state treasurer has to sign off on any deal more than $50,000 -- which certainly applies to the pipeline project that's expected to cost the three-county region up to $300 million.

The Genesee County Board of Commissioners took steps last week to borrow up to $35 million to cover the initial construction costs for the pipeline.

Genesee County Drain Commissioner Jeff Wright said he was asked to attend the meeting Thursday in Lansing. He said his office will be glad to be there to answer any questions about the KWA proposal.

County officials claim that continuing to buy water from the city of Detroit will cost the region $2.1 billion during the next 25 years. By building a pipeline, that cost would no more than $1.9 billion over the same period.

"It's cheaper to build our own system than to continue to pay more and more to the city of Detroit," Wright said. "This is about the least expensive way for our people to get the best quality water."

Croft said the Flint River isn't the best option for Flint's primary source because of concerns about capacity during drought conditions and questions about what the city and county would rely on as their state-required backup source, which is currently the river.

If the city were to make the Flint River its primary source, major upgrades would have to be made to the dams and other infrastructure, Croft said.

Blending river water with Detroit water would still leave Flint vulnerable to future rate increases from Detroit, he said.

Going with the KWA pipeline, on the other hand, would mean a fixed water cost, Croft said.

"A lot of things are conditional (with blending)," Croft said. "That's not a good scenario for us. We're looking for a long-term solution not a short-term one."

Still, no decisions have been finalized, he said.

"The state has to support any decision of this magnitude," he said. "This is about us making the best-informed decision we can make

Cc: Wurfel, Sara (GOV); Silfven, Ken (GOV); Weiss, Kurt (GOV)
Subject: Flint Water System Update

After speaking with Andy, Dan, Dennis and John, we have a plan for the next steps in Flint's request to participate in the KWA with Genesee County. Here is what we can confirm publicly, although unless it's a permitting question, we should have Treasury (Terry or I) answer any inquiries.

Ed Kurtz will submit a resolution to join the Karegnondi Water Authority (KWA) to the Treasurer, likely today. Once I receive word that we have officially received, we can confirm that we have it and the Treasurer will thoroughly review the resolution and perform due diligence before making a decision. Under PA 436, the State Treasurer must approve contracts over $50,000 that were not competitively bid.

No date has been set for the Treasurer to complete his review, but, he is fully aware of the tight timelines necessary to get approvals for the upcoming construction season, and will conduct his review accordingly.

That is all we can confirm publicly through next week. Just so you are aware, **and not for public consumption**, a call was placed to DWSD to let them know that Ed Kurtz was submitting his request and that if they have a final best offer that they should submit it very soon. This may prompt them to go to the media, or not, but be prepared if you get a call from that angle.

We need to develop some talking points for the following week, when Andy makes his determination. I will try to put together a draft by the end of the day and send it around for review. If anyone has anything they would like me to add, feel free to send it my way.

Let me know if you have any questions.

-Caleb

Hi guys –

Just wanted to loop back and check in re: timing on this issue. Last understanding was that was under close review by state treasurer and that soonest decision would be made is end of this week, beginning of next.

As you're both out this week (☹), just want to make sure we have a mechanism in place to coordinate with us in Gov's comm office as soon as know timing and plan so we can be ready with messaging and any outreach that may be needed. Sounds like this will be contentious one way or the other regardless of the determination so just trying to make sure we're prepared as possible.

Please advise. Thanks!

Assuming we don't get different direction, I suspect Andy would sign early next week. He is on vacation this week.

Thanks, Caleb. (And welcome back!)

Agreed, though I think there's going to need to be couple of topline message points that get to Treasurer's review process very generally (ala Ron Fonger's piece that pointed out that one community is going to lose while another "wins" regardless of the outcome). Doesn't sound like Detroit may take lighlty if that ends up being outcome.

We also do need a comms/outreach plan to make sure we've got all components and notification bases covered.

> Here is the start of some topline messages for Flint … I don't think that we need to get too deep into the specifics on the deal, we can leave that to Ed and others to discuss. Please let me know of any suggestions and additions that you have. I plan to also put together some background information that we can have on hand when discussing the topic. As I mentioned before, it likely won't be until the week of Apr 8th that we discuss this publicly.
>
> - This is a decision made by the City of Flint and is a local decision that affects their local water supply.
> - Flint Emergency Manager Ed Kurtz has heavily involved the city's elected officials throughout the decision-making process and all agree that this is best for the citizens and businesses in Flint.
> - This will save Flint at least $100 million over the next 25 years, and possibly as much as $300 million.

- The Departments of Treasury and Environmental Quality have approved the financial and environmental soundness of KWA's plan.

- Flint accounts for only 2% of DWSD's capacity.

Hi there guys - had a voice mail from Dominick (sp) Adams at Flint Journal late this afternoon your time re: "when Governor was going to decide on Flint's water?" Have not talked with him. And haven't seen the news yet (though haven't had a chance to really keep on top of things) so assuming that's still pending. His contact info is attached. Thx!

Ron and Dominic –

Just wanted to confirm that I received both of your messages and I believe Caleb Buhs has tried to reach and get back with you. I believe you and the Journal are all set. Just in case, he's cc'd here and his cell is PPI

So you know, our team has been on different assignments so thankfully both Kurt Weiss and Caleb Buhs have been on loan to our team to help cover in the interim. So Dominic – when you get calls from one of them, they are calling on my and the Governor's behalf.

Thanks much and best regards,
SW

Ed Kurtz and Kevyn Orr spoke this afternoon. Ed indicated that Flint will not accept the last offer from DWSD. His formal letter is attached.

I spoke with both (separately) after the call. They both indicated that they had a good conversation, and that they sincerely look forward to working with the other in good faith over the next couple years.

Kevyn indicated that he would follow up with Sue McCormack, and that his direction will be that there be no more talking to the press about the issue. Ed plans to stay silent on the deal until Monday, at which time he will address the issue in a matter of fact matter, and stay away from any divisive language regarding the issue.

ELECTRONIC LETTER

April 26, 2013

Mr. Kevyn Orr
Emergency Manager
Coleman A. Young Municipal Center
2 Woodward Avenue, Suite 1126
Detroit, MI 48226

RE: DWSD Offer Evaluation

Dear Mr. Orr:

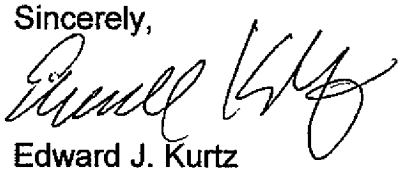
DWSD's offer of a Public/Public Partnership appears on the surface to offer significant cost of water savings, particularly in the near-term. However, further analysis exposes several flaws and weaknesses with the offer that reduce any potential appeal. First, the offer continues to use a grossly inaccurate estimate of the KWA operating and capital costs over the next thirty years. This one estimate is off by at least $800 million and perhaps by as much as $1 billion over that timeframe. And since DWSD claims "total savings to the Flint region are over $900 million", they have relied on this flawed estimate of KWA cost to make this claim. This offer also relies on a projection based on very little capital expenditures, no repairs on a system that is past its life expectancy, and annual rate increases of 4.7% over the next 30 years.

Secondly, and of much greater concern to Flint and GCDC, DWSD's offer of partnership would not so much foster a true collaborative relationship, but instead contractually transfers significant liability and risk for the next thirty years. DWSD's offer states the contract "would reflect more input into and control over system investments and cost variables." Unfortunately, these future investments and cost variables are not contained in the DWSD cost estimates. DWSD has included a fixed monthly charge to recover allocated capital revenue requirements, but this number is largely for past expenditures and debt costs, and does not include the significant future capital costs which will be required to maintain their nearly 50 year-old system. Once again quoting from the

DWSD April 24th offer letter under the Rate Increase Guarantee section – "DWSD proposes a guarantee that the capital portion of the Lake Huron System rate structure (the fixed monthly charge) will not increase for the life of the contract, unless additional capital investment is made in current and future Lake Huron System facilities." No one disputes that additional capital costs will be required that will total in the millions of dollars.

The DWSD offer is able to appear to offer savings on the surface since they have offloaded much of the above future capital costs. But to do so, DWSD has had to gloss over or simply ignore these large future expenditures. If these unaccounted for capital costs were to be calculated and added to the 30 year Flint and GCDC cost of water estimates, the DWSD offer becomes one in which the savings swing far to the advantage of the Karegnondi Water Authority.

Sincerely,



Edward J. Kurtz

ATTACHMENT 1

This offer has more risk involved than previous proposals. KWA would be responsible for between 20% and 100% of the repair costs on the pipeline and related assets from Port Huron

The numbers in the offer do not make sense. DWSD indicates savings of over $900 million while KWA's total cost over 30 years is less than $650 million.

Offer is based on very little capital improvements, no repairs and a 4.7% annual increase over the life of the contract.

There are no rate guarantees after the first year for capital, O & M or consumption.

KWA would be responsible for redundancy at a cost of $94.68 million per DWSD's estimate.

Does not guarantee a rate structure if system regionalizes or DWSD regionalizes, or Detroit enters bankruptcy.

Flint and Genesee County could have a connected waste/water system that serves all or part of five counties.

The potential for further consolidation of services between the city and the county i.e...water, wastewater, 911, etc,

This partnership will give Flint ownership of its own water supply system with real representation on its board of directors, making all treatment and delivery system decisions.

Flint's participation allows them to utilize its own water treatment facility that it has invested 50 million into and only currently exercises four days per year.

The investment gives us a new pipeline with a life expectancy of 75 years, as well as a 2nd product, untreated water. Under DWSD we would have no ownership after the end of the contract, and a new pipeline would still need to be built.

A 30 year contract with DWSD keeps us on a system that is 48 years old with a design life of 75 years. There will be necessary major investments or replacement costs that are not accounted for in this DWSD proposal.

KWA guarantees its capitol rate for 25 years. The capitol rate is 90 % of the total costs.

The commodity charge of $1.30 per mcf is mainly driven by energy costs. The whole operation will employ 5-7 people.

A thirty year contract with DWSD will lock Flint into hundreds of employees, labor costs and legacy costs.

The combination of low financing, labor and material make this the optimal time for this investment. At our meeting with the governor on April 19th Detroit acknowledged a second pipeline had to be built.

KWA could be used as a backup emergency supply for the existing 48 year old pipeline.

It brings a total economic package to our community i.e. We have the I-69 corridor, I-75 interchange, the rail system connected to Port Huron, and one of the busiest airports in the state. Owning our own water supply completes that package and keeps $25 million in our community.

Mr. Fausone's continued insistence on a 12 month timeline to calculate the termination fees leaves a question mark on the costs.

Construction Costs

- Rowe/AECOM/J & H $272,000,000
- TYJT $357,000,000

  Include: 10% bond coverage (dispelled)

  30% additional engineering (dispelled)

  Back-up power (dispelled)

- DWSD Starts at: $357,000,000 and adds:

  $134,630,000 for bond sizing

  $11,074,500 for bond sale cost

  For a total of: $503,274,500

  Plus need to collect $6,984,000 per year extra for bond coverage (20%)

Now we need:

20% bond coverage

30% additional engineering

38% bond sizing

We dispelled TYJT numbers; now DWSD starts with those numbers and adds more They add the same costs to Flint and GCDC construction costs (baseline figures and assumptions – KWA)

Baseline Figures and Assumptions - KWA Scenario

	DWSD Water Rate Structure			
	Fixed	Standby	Commodity	
2014	738,006	#N/A	13.01	Service ceases after 2016

Total Water Service Costs for Flint / Genesee County Drain Commission

Costs of Current Facilities / Operations

Same as DWSD scenario

Costs of Future Facilities / Operations

Financing Costs for New Projects	Flint WTP Improvements	GCDC WTP and Other	KWA System (a)
Project Cost	7,100,000	110,038,554	357,578,060
Bond Sizing Factor	37.65%	37.65%	37.65%
Additional Bond Proceeds Needed	2,670,000	41,430,000	134,630,000
Bond Sale Size	9,800,000	151,500,000	492,200,000
Bond Issuance Expenses - %	2.25%	2.25%	2.25%
Bond Issuance Expenses	220,500	3,408,800	11,074,500
Finance Rate	5.00%	5.00%	5.00%

Organizer:	GovCalendar
Required Attendees:	Agen, Jarrod (GOV); Wurfel, Sara (GOV)

RDS to call: **PPI**

- Call right at 8:15 a.m.; Call will be live immediately. SW will introduce you, the other participants and open it up for your opening remarks.
- Other participants will be Dan Wyant, DEQ Director; Nick Lyon, DHHS Director; and Dr. Eden Wells, MI's Chief Medical Executive
- SW will moderate and screen reporter questions.

Note: Website will not go live until 1:00 PM

Purpose: Media conference call to discuss Flint water comprehensive action plan

Possible Topics:
Flint water action plan
Lead in Flint water
Handling of Flint Water issue
Reconnecting Flint to Detroit water

Media invited:
Flint area media (print, TV and radio) – Flint Journal/Ron Fonger; WJRT TV 12, WNEM TV 5, WEYI TV 25, WFNT Radio
Associated Press – Ed White
Detroit News – Jim Lynch
Detroit Free Press – Nancy Kaffer, Kristi Tanner & Kathy Gray
Michigan Radio – Steve Carmody

Agenda:

8:15-8:16 AM	SW intro; sets parameters; introduces other participants; turns over to Gov for opening remarks
8:16-8:20 AM	Governor gives opening remarks; highlights reason for state action; introduces Director Wyant
8:20-8:24 AM	Director Wyant remarks; highlights key steps in the action plan; introduces Director Lyon
8:24-8:26 AM	Director Lyon remarks; highlights health components of the plan; turns back to Governor Snyder
8:26-8:37 AM	Governor Snyder opens it up for Q&A
8:37-8:39 AM	Governor Snyder closing remarks
8:39-8:40 AM	SW wraps up call; reminds reporters of embargo, 1:30 p.m. press conference and how to get a hold of everyone

High level points:

- Protecting the health and safety of our residents in Flint and across Michigan is always our top priority.
    - All Michigan residents need access to safe, clean water
- That's why today, in consultation with health and water experts in our state agencies, I'm advocating reconnecting the Flint drinking water with the Great Lakes Water Authority.
- I'm recommending to my partners in the Legislature that the state government provide $6 million of the needed $12 million to reconnect with authority.
    - The Flint city government has agreed to cover $2 million of this cost, and the Charles Stewart Mott Foundation is generously offered to donate $4 million.
- What you are seeing here today is a community coming together to work toward solving a problem.
    - I appreciate the assistance of Mayor Walling, and the U.S. Environmental Protection Agency.
    - This is a collaborative approach, and I appreciate that community organizations including the United Way and come forward to assist.

Briefing: Flint Water System Press Conference
Thursday, Oct. 8, 2015
Mott Foundation/Commerce Center Building Ground Floor
519 S. Saginaw St., Flint
Communications: Sara Wurfel, 517-599-3470, wurfels@michigan.gov
Dave Murray, 517-449-8343, murrayd1@michigan.gov

Purpose:

We're announcing the decision to reconnect Flint to the Detroit Water and Sewerage Department, a collaborative effort between the state government, Flint city government and the Mott Foundation.

High level points:

- Protecting the health and safety of our residents in Flint and across Michigan is always our top priority.
    - All Michigan residents need access to safe, clean water.

- That's why today, in consultation with health and water experts in our state agencies, I'm advocating reconnecting the Flint drinking water with the Great Lakes Water Authority.

- I'm recommending to my partners in the Legislature that the state government provide $6 million of the needed $12 million to reconnect with authority.
    - The Flint city government has agreed to cover $2 million of this cost, and the Charles Stewart Mott Foundation is generously offered to donate $4 million.

- What you are seeing here today is a community coming together to work toward solving a problem.
    - I appreciate the assistance of Mayor Walling, and the U.S. Environmental Protection Agency.
    - This is a collaborative approach, and I appreciate that community organizations including the United Way and come forward to assist.

Agenda:

9:00 AM - 9:45 AM	Gov meets with Mayor Walling in [Room 1]
9:45 AM – 10:00 AM	Pre-Brief in [Room 2]
10:00 AM – 10:01 AM	Harvey Hollins kicks off press conference; introduces Governor
10:01 AM – 10:05 AM	Governor gives remarks
10:05 AM – 10:06 AM	Harvey Hollins introduces Mayor Dayne Walling
10:06 AM – 10:10 AM	Mayor Walling gives remarks
10:10 AM – 10:11 AM	Harvey Hollins introduces DEQ Director Dan Wyant
10:11 AM – 10:15 AM	Director Wyant gives remarks
10:15 AM – 10:16 AM	Harvey Hollins introduces DHHS Director Nick Lyon
10:16 AM – 10:17 AM	Director Nick Lyon introduces Dr. Eden Wells
10:17 AM – 10:20 AM	Dr. Eden Wells remarks
10:20 AM – 10:21 AM	Harvey Hollins introduces Ridgway White of Mott Foundation
10:21 AM – 10:25 AM	Ridgway White gives remarks
10:25 AM – 10:35 AM	Q&A from the podium
10:35 AM	Event concludes; Governor departs

Attendees: Roughly 20 in audience

Susan	Borrego	Chancellor, U of M Flint
Oscar	Overton	Pastor
Alfred	Harris	Pastor

Latrelle	Holmes	Pastor
Jim	Ananich	Michigan Senate
Sheldon	Neely	Michigan House
Phil	Phelps	Michigan House
Jeff	Wright	Drain Commissioner, Genesee County
Amy	Hovey	Dan Kildee office
Jamie	Gaskin	Dan Kildee office
Tim	Herman	Flint Chamber of Commerce
Brian	Larkin	Flint Chamber of Commerce
Eric	Mays	Flint City Council
Jacqueline	Poplar	Flint City Council
Kerry	Nelson	Flint City Council
Joshua	Freeman	Flint City Council
Wantwaz	Davis	Flint City Council
Herbert	Winfrey	Flint City Council
Monica	Galloway	Flint City Council
Vicki	VanBuren	Flint City Council
Scott	Kincaid	Flint City Council

Speaker comments:

RDS – Collaboration led to solution, outline of solution
Mayor Walling – Importance of solution to Flint
Dan Wyant – School testing results, overview of steps on transition from Flint River to DWSD
Nick Lyon – DHHS involvement
Dr. Eden Wells – Testing of water going forward, use of filters approved by NSF
Ridgway White – Importance of collaboration/commitment to Flint

Talking points:

- Protecting the health and safety of our residents in Flint and across Michigan is always our top priority.
    - All Michigan residents need access to safe, clean water

- That's why today, in consultation with health and water experts in our state agencies, I'm advocating reconnecting the Flint drinking water with the Great Lakes Water Authority.

- I'm recommending to my partners in the Legislature that the state government provide $6 million of the needed $12 million to reconnect with authority.
    - The Flint city government has agreed to cover $2 million of this cost, and the Charles Stewart Mott Foundation is generously offered to donate $4 million.
    - The Michigan Department of Health and Human Services and the Department of Environmental Quality today also is committing an additional $3.5 million for water filters, free lead testing through the state laboratory for Flint water customers, and hiring additional staff to conduct health exposure monitoring for lead in drinking water.

- What you are seeing here today is a community coming together to work toward solving a problem.
    - I appreciate the assistance of Mayor Walling, and the U.S. Environmental Protection Agency.
    - This is a collaborative approach, and I appreciate that community organizations including the United Way and come forward to assist.

- Today's announcement in an important step as we move forward together.
    - But it is not our first step, nor will it be our last.

        - This announcement builds on work we've already set in place.
            - That includes $4.2 million in state grants and loan restructuring to help identify and fix infrastructure problems.
            - State agencies have been working closely with Flint leaders and the community for more than a year.

- There will be more to do.
    - Flint has an aging water infrastructure system with challenges that we – together – will continue to address.

- We will continue to test Flint schools for lead levels in drinking water.
    - Schools across the state might also have questions.
    - The Department of Environmental Quality will work with districts across the state to provide testing.
        - Districts can send water samples and paperwork and the nominal charge. (It costs $26 per sample).

- The steps outlined in the comprehensive action plan are still in effect.

FAQs for Media Q&As

Switch to Great Lakes Water Authority

What finally pushed the state to this decision?

This was the City's request, and the Governor supports it, based on several key factors:
In the near term, DWSD water will be easier to manage. It comes from a more stable source than the river, it is fully optimized for corrosion control, and it is clear that residents of Flint have more confidence in this water source.

Will this solve Flint's water crisis?

In combination with the other short term, intermediate term and long-term steps outlined last week, this move represents a big step forward. Flint still has serious system maintenance challenges it must address.

If you're saying residents will still have lead because of their plumbing, does that mean every other city in this state has a lead problem?

Many areas of the state have lead in their infrastructure mix.

Where's the state getting the money to fund this?

We have submitted a formal request to lawmakers via the appropriations process.

Where's the city getting the money to fund this?

The city is contributing all it can, and is getting assistance for its match from the Mott Foundation.

How long will the switch take?

The switch will be completed by the City and Great lakes Water Authority, but our understanding is that it can be accomplished in the very near term once the arrangements are complete.

How long will it take before Detroit's corrosion controls provide protection for Flint?

It will take some time for the corrosion control additives to build on pipe walls throughout the system. Estimates vary. The state can assure we will commence monitoring of the system early 2016 and report results as we get them to keep the community updated.

Why do residents still need to use filters and bottled water?

The filters and bottled water are responsible precautions for any resident concerned about lead exposure.

Do the filters actually work? We've been hearing they don't protect for lead.

Yes, the filters work. They are all certified for lead removal by the National Sanitation Foundation.

The filters are only good for 100 gallons. What happens when they are used up?

They will need to be replaced. And residents can get a new filter.

What about restaurants?

What's going to be done about lead service lines?

Long term, this is the only permanent solution to lead exposure. The state has committed to helping the city accomplish this goal long term.

Do you wish you'd made this switch sooner?
We support the City's decision. We can't look backward. We feel the state has responded quickly and effectively as information has surfaced, been investigated and verified. While the City of Flint is, right now, in compliance with the federal Lead and
Copper Rule, we recognize there is a disparity between surveillance testing and other testing happening in the community that we need to better understand and we are working on developing our knowledge.

Schools testing

What do these results say?
The results say we need to further investigate Flint schools and help the schools find clearer causes for some the results we got.

Any theories about what's going on?
It is possible there are specific points in the plumbing that have lead components which need to be replaced, but we can't say anything definitively until we perform an investigation at each school.

Do the schools have lead service lines? If not, why are they getting such high results?
The schools we tested initially do not have lead service lines. There are a few possible reasons why lead is being detected at specific points in the buildings and not others. When we know things definitively, we will make the information public.

How long do the schools have to stay on bottled water? Just until the switch to Detroit, or longer term?
We are encouraging the schools to continue their current protective measures as a precaution until we can get into the buildings and get more answers.

Why did you only test 13 schools?
That was what the Flint Public Schools requested.

What happens to other schools?
We will test all the schools in Flint if they request it.

What about the schools that can't afford to update their entire plumbing systems?
This is why we are having plumbing assessments completed. There is no way to know yet what each building will require.

How confident are you in your testing? You've got results all over the map.
We are confident that our testing meets the requirements for the federal Lead and Copper Rule, which is surveillance monitoring. The bigger question is whether surveillance monitoring meets the public health protection standards that Lead Exposure Testing methods do. The EPA is working on that question now, and we are engaged in that dialogue.

What do you mean by "health exposure testing"? What are you doing next?

The 90th percentile of your results is still below 15 ppb. Does that make you more or less confident in your testing and in your protocols?

It makes us confident that the testing protocol delivers consistent results. But again, it does raise questions about whether this testing method shows what people think it does or what they really want to know, which is actual lead exposure from lead plumbing in a home.

Any idea how long kids have been exposed to lead? Was it before the move to the Flint River?
That is possible. We don't know.

How does the state bring this new information into the broader picture of kids' lead exposure across the state?

Gov. Rick Snyder: Move back to Detroit water provides best protection for public health in Flint

State, Mott Foundation and city form partnership to fund switch

FLINT, Mich. – Flint families and children will be better protected by reconnecting with the Great Lakes Water Authority as the source of the city's drinking water, Gov. Rick Snyder said.

Snyder said Thursday that he will request the state Legislature to provide half, or $6 million, of the $12 million needed to reconnect with the authority. The Flint city government will provide $2 million and the Charles Stewart Mott Foundation will donate $4 million.

"All Flint residents need clean, safe drinking water," Snyder said. "The technical experts helping the city on its water advisory all agree this move back to the Great Lakes Water Authority provides the best public health protection for children and families. This effort today is the result of people coming together to solve a problem. I appreciate Detroit's willingness to reconnect with Flint, the Mott Foundation's generous donation, and the dedication of all parties to come together to protect Flint families and children."

The Michigan Departments of Environmental Quality and Health and Human Services today also committed an additional $3.5 million for water filters, free lead testing through the state laboratory for Flint water customers, and hiring additional staff to conduct health exposure monitoring for lead in drinking water.

Flint city leaders requested the state's help to fund the reconnection after a Wednesday meeting of Flint's Technical Advisory Committee. Flint's move to the Great Lakes Water Authority is expected to cost about $1.3 million per month until the Karegnondi Water Authority is completed next summer.

INSERT MAYOR QUOTE HERE

The move to Detroit water, which is drawn from Lake Huron, carries many public health benefits. As large bodies of water, the Great Lakes are naturally prone to fewer problems from large rain events and other runoff issues that can be present in shallower rivers. Additionally, the Great Lakes Water Authority has already fully optimized its corrosion control, using phosphates to help coat the insides of pipes and prevent lead from leaching into the water.

However, reconnecting with the authority will not completely resolve the city's problem with lead service lines or aging infrastructure. It will take time for pipes in Flint to become coated with the phosphate corrosion control. Additionally, some households in the city could experience lead in their drinking water until all lead pipes and plumbing are replaced.

INSERT MOTT FOUNDATION QUOTE HERE

To best protect public health, Snyder said state and local authorities will continue to carry out steps outlined on Oct. 2 in a comprehensive action plan, including continued testing, the use of faucet filters and providing residents with accurate information about steps to eliminate lead exposure.

Free filters are available for current MDHHS clients at the 125 E. Union St. or 4809 Clio Road MDHHS office locations. For residents who are not currently enrolled in MDHHS assistance programs, free filters are available at the Genesee County Community Action Resource Department offices at 2727 Lippincott and 601 North Saginaw in Flint. Staff will be at all four locations from 9 a.m. to 4 p.m., Monday through Friday, to distribute filters and assist residents who have questions about proper installation. At the Lippincott location only, extended hours will be offered this weekend, including until 7 p.m. on Thursday and Friday and from 10 a.m. to 2 p.m. on Saturday.

Other good practices for residents concerned about lead include turning on the cold water tap and running the water until it's as cold as it will go. Additionally, only use cold water for cooking, drinking and especially mixing baby formula.

School test results released; more investigation planned

The state today also released the first results from its lead screening program in schools and homes. Of 37 total samples taken at 13 buildings, four samples spread over three buildings exceeded the federal action level of 15 parts per billion.

However, this sampling provides only an initial screen, and the state is committing to further testing water and inspecting plumbing at these schools. Until testing is complete, schools are advised to continue using bottled water and filtration as a precaution to protect children.

In addition, free testing is still available for any other Flint school, including daycares and Head Starts. Free testing is also available for any Flint resident.

Additional information, including more detailed lead screening results, is available at www.michigan.gov/flintwater.

Subject: RE: Flint

If this isn't for tomorrow, Nancy, then we should slate some time to talk at length tomorrow. I will be more than happy to walk through the history of what's been done already and what's in the works.

This is absolutely an issue the administration has been actively engaged on and will continue to do so – let there be no Q on that front.

Hi Sara,

Wanted to touch base again before leaving for the day. I'm writing on this again this week, and really would like to know a) if you guys now believe there is an issue with lead in the water, or are engaging in further testing/analysis to determine if lead is an issue, and b) what exactly you guys are doing to help get safe drinking water to Flint kids.

Best,

Nancy

Can you give me some details of the things that you think are wrong? We always want to know about mistakes or errors.

Also, I asked you last week to comment on the situation – still interested in hearing what you are doing to respond to the water situation in Flint, which has resulted in an increasing number of children with elevated blood-lead levels. We're doing a follow-up, and would love to know what specifically the governor's office is doing.

I'm still in disbelief and simmering to be quite frank over that column, Nancy. That was fairly unbelievable - 'resounding yawn'? Seriously? You picked and chose facts and components to weave together a set narrative, leaving out so many critical pieces of all the state, Governor and administration have done to help the city and its residents in this situation.

There has been and there will be more that we're doing on this front -- again do everything possible to play a supportive role and work in collaborative fashion across all levels of government, with the community, faith and business leaders, and residents. Protecting public health is paramount and safe, clean, accessible drinking water is essential. That's what we solely focused on helping ensure.

Back in touch later.

Greetings Kathryn –

Per our conversation just a bit ago, below is latest version of release that works to incorporate and marry all of yours and the city's comments, along with others. Believe we got most addressed.

Please review and make sure all good from your end.

We can do any final, major tweaks in the morning.

Gov. Rick Snyder: Move back to Detroit water provides best protection for public health in Flint

State, Mott Foundation, city form partnership to fund switch until KWA is ready

FLINT, Mich. – Flint families and children will be better protected by reconnecting with the Great Lakes Water Authority as the source of the city's drinking water until the Karegnondi Water Authority pipeline is completed, Gov. Rick Snyder said.

Snyder said Thursday that he will request the state Legislature to provide half, or $6 million, of the $12 million needed to reconnect with the authority through next summer, when the KWA is expected to be completed. The Flint city government will provide $2 million and the Charles Stewart Mott Foundation has committed $4 million.

"All Flint residents need clean, safe drinking water," Snyder said. "The technical experts helping the city on its water advisory all agree this move back to the Great Lakes Water Authority provides the best public health protection for children and families. This effort today is the result of people coming together to solve a problem. I appreciate Detroit's willingness to reconnect with Flint, the Mott Foundation's generous commitment, and the dedication of all parties to come together to protect Flint families and children."

The Michigan Departments of Environmental Quality and Health and Human Services today also committed an additional $3.5 million for water filters, free lead testing through the state laboratory for Flint water customers, and hiring additional staff to conduct health exposure monitoring for lead in drinking water.

Flint city leaders requested the state's help to fund the reconnection and to assist with health and infrastructure issues. Flint's move to the Great Lakes Water Authority is expected to cost about $1.3 million per month until the Karegnondi Water Authority is completed next summer.

"It's heartening to know so many people are working at so many levels to bring safe, clean water back to Flint," Mott Foundation President Ridgway White said. "We believe that reconnecting the city's water supply to Lake Huron is the right and necessary thing to do, and we're glad we could help the state and the city make it happen."

The move to Detroit water, which is drawn from Lake Huron, carries many public health benefits. As large bodies of water, the Great Lakes are naturally prone to fewer problems from large rain events and other runoff issues that can sometimes be present in shallower rivers. Additionally, the Great Lakes Water Authority water already has additional corrosion control, using phosphates to help coat the insides of pipes and prevent lead from leaching into the water.

However, reconnecting with the authority will not completely resolve the city's problem with lead service lines or aging infrastructure. It will take time for pipes in Flint to become coated with the phosphate corrosion control. Additionally, some households in the city could experience lead in their drinking water until all lead pipes and plumbing are replaced.

"Reconnecting to Detroit is the fastest way to deliver clean, safe water to Flint and stabilize the infrastructure system," Flint Mayor Dayne Walling said. "I appreciate the state, the Mott Foundation, Detroit, and the county's participation in a solution for Flint's water problems. The health and safety of Flint's families, children and seniors is my top priority and reconnecting to Detroit is a major step that the city could not take alone given budget constraints."

To best protect public health, Snyder said state and local authorities will continue to carry out steps outlined on Oct. 2 in a comprehensive action plan, including continued testing, the use of faucet filters and providing residents with accurate information about steps to eliminate lead exposure.

Free filters are available for current MDHHS clients at the 125 E. Union St. or 4809 Clio Road MDHHS office locations. For residents who are not currently enrolled in MDHHS assistance programs, free filters are available at the Genesee County Community Action Resource Department offices at 2727 Lippincott and 601 North Saginaw in Flint. Staff will be at all four locations from 9 a.m. to 4 p.m., Monday through Friday, to distribute filters and assist residents who have questions about proper installation. At the Lippincott location only, extended hours will be offered this weekend, including until 7 p.m. on Thursday and Friday and from 10 a.m. to 2 p.m. on Saturday.

Other good practices for residents concerned about lead include turning on the cold water tap and running the water until it's as cold as it will go. Additionally, only use cold water for cooking, drinking and especially mixing baby formula.

School test results released; more investigation planned

The state today also released the first results from its lead screening program in schools and homes. Of 37 total samples taken at 13 buildings, four samples spread over three buildings exceeded the federal action level of 15 parts per billion.

However, this sampling provides only an initial screen, and the state is committing to further testing water and inspecting plumbing at these schools. Until testing is complete, schools are advised to continue using bottled water and filtration as a precaution to protect children.

In addition, free testing is still available for any other Flint school, including daycares and Head Starts. Free testing is also available for any Flint resident.

Additional information, including more detailed lead screening results, is available at www.michigan.gov/flintwater.

###

STATE OF MICHIGAN
EXECUTIVE OFFICE
LANSING

RICK SNYDER
GOVERNOR

BRIAN CALLEY
LT. GOVERNOR

CONTACTS:	FOR IMMEDIATE RELEASE
Sara Wurfel or Dave Murray Governor's Office: 517-335-6397 Brad Wurfel, 517-284-6713 Department of Environmental Quality Jennifer Eisner, 517-230-9804 Department of Health and Human Services	Thursday, Oct. 8, 2015

Gov. Rick Snyder: Move back to Detroit water provides best protection for public health in Flint

State, Mott Foundation, city form partnership to fund switch until KWA is ready

FLINT, Mich. – Flint families and children will be better protected by reconnecting with the Great Lakes Water Authority as the source of the city's drinking water until the Karegnondi Water Authority pipeline is completed, Gov. Rick Snyder said.

Snyder said Thursday that he will request the state Legislature to provide half, or $6 million, of the $12 million needed to reconnect with the authority through next summer, when the KWA is expected to be completed. The Flint city government will provide $2 million and the Charles Stewart Mott Foundation has committed $4 million.

"All Flint residents need clean, safe drinking water," Snyder said. "The technical experts helping the city on its water advisory all agree this move back to the Great Lakes Water Authority provides the best public health protection for children and families. This effort today is the result of people coming together to solve a problem. I appreciate Detroit's willingness to reconnect with Flint, the Mott Foundation's generous commitment, and the dedication of all parties to come together to protect Flint families and children."

The Michigan Departments of Environmental Quality and Health and Human Services today also committed an additional $3.5 million for water filters, free lead testing through the state laboratory for Flint water customers, and hiring additional staff to conduct health exposure monitoring for lead in drinking water.

Flint city leaders requested the state's help to fund the reconnection and to assist with health and infrastructure issues. Flint's move to the Great Lakes Water Authority is expected to cost about $1.3 million per month until the Karegnondi Water Authority is completed next summer.

"It's heartening to know so many people are working at so many levels to bring safe, clean water back to Flint," Mott Foundation President Ridgway White said. "We believe that reconnecting the city's water supply to Lake Huron is the right and necessary thing to do, and we're glad we could help the state and the city make it happen."

The move to Detroit water, which is drawn from Lake Huron, carries many public health benefits. As large bodies of water, the Great Lakes are naturally prone to fewer problems from large rain events and other runoff issues that can sometimes be present in shallower rivers. Additionally, the Great Lakes Water Authority water already has additional corrosion control, using phosphates to help coat the insides of pipes and prevent lead from leaching into the water.

However, reconnecting with the authority will not completely resolve the city's problem with lead service lines or aging infrastructure. It will take time for pipes in Flint to become coated with the phosphate corrosion control. Additionally, some households in the city could experience lead in their drinking water until all lead pipes and plumbing are replaced.

"Reconnecting to Detroit is the fastest way to deliver clean, safe water to Flint and stabilize the infrastructure system," Flint Mayor Dayne Walling said. "I appreciate the state, the Mott Foundation, Detroit, and the county's participation in a solution for Flint's water problems. The health and safety of Flint's families, children and seniors is my top priority and reconnecting to Detroit is a major step that the city could not take alone given budget constraints."

To best protect public health, Snyder said state and local authorities will continue to carry out steps outlined on Oct. 2 in a comprehensive action plan, including continued testing, the use of faucet filters and providing residents with accurate information about steps to eliminate lead exposure.

Free filters are available for current MDHHS clients at the 125 E. Union St. or 4809 Clio Road MDHHS office locations. For residents who are not currently enrolled in MDHHS assistance programs, free filters are available at the Genesee County Community Action Resource Department offices at 2727 Lippincott and 601 North Saginaw in Flint. Staff will be at all four locations from 9 a.m. to 4 p.m., Monday through Friday, to distribute filters and assist residents who have questions about proper installation. At the Lippincott location only, extended hours will be offered this weekend, including until 7 p.m. on Thursday and Friday and from 10 a.m. to 2 p.m. on Saturday.

Other good practices for residents concerned about lead include turning on the cold water tap and running the water until it's as cold as it will go. Additionally, only use cold water for cooking, drinking and especially mixing baby formula.

School test results released; more investigation planned

The state today also released the first results from its lead screening program in schools and homes. Of 37 total samples taken at 13 buildings, four samples spread over three buildings exceeded the federal action level of 15 parts per billion.

However, this sampling provides only an initial screen, and the state is committing to further testing water and inspecting plumbing at these schools. Until testing is complete, schools are advised to continue using bottled water and filtration as a precaution to protect children.

In addition, free testing is still available for any other Flint school, including daycares and Head Starts. Free testing is also available for any Flint resident.

Subject: Flint water issues

We're having a conference call at 3:15 to discuss some new Flint water issues.

Nutshell: Agitators claiming "environmental racism" and comparing Flint water to the gas chambers at concentration camps. But Flint water still determined to be safe.

Yup.

Flint water briefing and talking points

Communications: Dave Murray, murrayd1@michigan.gov, 517-449-8343

The problem

- Community activists are continuing to raise public concerns about the quality of Flint water, and the talk has grown uglier.
    - Longtime activist A.C. Dumas is raising the issue of an "environmental racism" lawsuit.
    - The president of the Michigan chapter of Al Sharpton's National Action Network told the media on Tuesday that Flint water is "almost as bad as gas chambers for Jews."

High-level points

- Flint residents need and deserve clean, safe water.

- There is potentially some short-term assistance the state and other groups can provide, but Flint needs significant upgrades to its water infrastructure to replace an aging system that has long been neglected.

- The state recently awarded the city $2 million in grants to help with some of the issues, including a plan to locate the areas where pipes are most in need of repair to allow the city to prioritize its replacement projects.

- The Department of Environmental Quality continues to work with the city to monitor water quality.

- **Only if asked:**
    - If asked about the accusations of racism, we should push back hard.
        - These are water infrastructure problems that have been growing in Flint for decades.
        - The change from Detroit water to water from Lake Huron via a new pipeline was a plan created by and supported by the Flint City Council and the mayor. The emergency manager at the time signed off on the plan at the urging of the council and mayor.
        - State leaders have worked with the city to help through its financial struggles to improve public safety, services and the overall quality of life.

Background

- The administration is looking into a variety of options that could improve the color and smell of the water while continuing to explain that the water is safe, and that Flint's water infrastructure needs significant upgrades for a long-term solution.
    - Options include working with area foundations and businesses to purchase filters to be attached to kitchen sinks that would improve water color and smell.
    - Another option would be to make bottled water available to affected residents.

- Flint's water issues are an infrastructure issue.
    - The system is 80 years old, and has not been adequately maintained for about 40 years.
    - The temporary water source – the Flint River – has harder water than the previous source, which was the Detroit Water and Sewer District.
        - The harder water exacerbates the problems in the aging water pipes, and residents have reported an increase in problems since the April switch from Detroit water to Flint River water.
    - The city is in the process of building a new pipeline to link with Lake Huron.
        - The work will take a year or more to complete.
        - Even when linked to Lake Huron, problems with the city pipes will remain.
    - Replacing the pipes costs about $1 million per mile.
        - The city hopes to spend about $8 million in water infrastructure repairs.

- Community leaders have demanded the city return to Detroit water.
    - This would not solve the on-going infrastructure issues.
    - DWSD would charge about $1 million a month to hook up Flint again.
        - The city can't afford this.
        - The additional cost would be passed along to ratepayers.
            - Residents already are paying a lot for their water, about $150 a month.

How can the state assist?

- The DEQ Drinking Water program works with communities around the state to ensure that municipalities provide customers with clean, safe drinking water.
    - Municipal water supplies are tested rigorously and regularly for more than 90 regulated contaminants, including microbial contaminants that pose an immediate public health concern.

- Gov. Snyder has awarded Flint $2 million in grants for water system infrastructure improvements, part of an overall $8 million plan to help cities through the Financially Distressed Cities, Villages, and Townships Grant Program.

- Flint is among 11 municipalities receiving grants through the program.
    - Municipalities are eligible for the grants of they are experiencing one or more conditions indicative of "probable financial stress," as defined by Public Act 436 of 2012, the Local Financial Stability and Choice Act.
    - Under the grant program, funding may be used to pay for specific projects, services, or strategies that move a city, village, or township toward financial stability.
    - There was $8 million appropriated for the program with a $2 million cap, per local unit.

- A $900,000 grant will allow the city to hire a contractor to perform a leak detection survey of the city water lines.
    - The city will receive a map of leak locations and an assessment of leak severity, allowing the city to prioritize leak repair.
    - The project also covers the expense of conducting a water pipe line wall thickness condition assessment on a portion of the city's pipes.

- The assessment will guide the city's water main replacement program.

- The city also was awarded $1.1 million to shut down its current Water Pollution Control Facility incinerator and replace it with new facilities which will allow for the disposal of waste in landfills.
  - The existing facilities are not up to federal Environmental Protection Agency standards.

- Dennis Muchmore and representatives from Treasury, DEQ and The Office of Urban Initiatives met with a delegation of concerned pastors to discuss the problem in early February.

Subject: RE: PIO report

Flint: They're technically still in violation of the total trihalomethane rule this quarter. All tested water in February was well below the standard, but the standard is calculated based on an average that includes the previous three quarters, and the fall 2014 results were mighty high. That'll be in the rearview with the next round of testing late spring.

In terms of next steps, not sure if you mean next steps for the city or Team RS. The city has spent tens of thousands hiring water specialists to advise them formally of what they already know and already were told by the DEQ: If you do no maintenance on your drinking water system for 40 years, it eventually begins to fail in ways big and small. However, they've gotten some positive press for hiring shiny, fancy out of state people who purport to specialize in river-based water supply challenges, so there's that.

We've encouraged them to develop a triage list of maintenance areas – which pieces of this 500-mile system are in greatest need right now, this year and next year? Once they've got that, the next step will be figuring out how to pay for it without causing another rate increase. Honestly, the big squall in Flint (and I heard Jerry Ambrose say it early this week) comes down to the fact that folks are paying approximately double what they should for water. There's no way to adjust that in the near term, but if team RS wants to truly help, treasury could look for some funding to assist with emergency maintenance projects this spring.

Team RS continues looking at some immediate term gestures, including dropping off bottled water or filters to homes that say they've got discolored or stinky water. If someone asked me what I think is the best possible 'thing' we could do to be seen helping Flint, it's this: Treasury gave them $2 million a couple months ago. $900,000 of that was to do system-wide assessment. That project is underway. When they get results, it'll include the list of hotspots in their system that are most in need of immediate address.
They need to do some maintenance work, like scrubbing the mung out of their pipes in some areas. THAT will reduce the discolored / odorific water. If there's a way to have the state support that work, it'd be huge help.

Aquaculture: It'll be a big story at some point, but right now we're just trying to make sure the public hears about it from us first, and that they understand we're setting the bar high.

Sorry I missed the meeting. Had a couple conflicts. Here's what I want to share with you:

Not Responsive

3. **Flint Water:** had a meeting yesterday with a company Baird put in the room to discuss their ozone technology. It was a good conversation but a non-starter for several reasons (Flint already has an Ozone system to modify its water, this company hasn't had its system certified for use on public drinking water supplies, and the problem they propose to address is not at the water plant but throughout various sections of the distribution system). More broadly, Harvey is looking for a 'thing' the state can be doing for Flint that will position SOM / RS positively. Suggestions range from handing out home water filters (think Britta faucet mount) to passing out jugs of water. After consulting with our experts in the Drinking water program, what we've really come to at DEQ is that if there's funding from treasury (or some charitable donor foundation), the best short-term use of dollars would probably be to hire a company to 'pig' the lines in the distribution system. This is a routine maintenance activity in municipal systems that involves an in-line device under pressure that clears funk out of the lines. **The good news on Flint**: Flint EM Jerry Ambrose noted yesterday that the city has some work to do on its system in the weeks ahead; the TTHM issue is quickly going away; the 'brown water' folks are loud but really few in number; the consultants are doing their work to make suggestions to help the city prioritize its needs; and, broadly, nobody seems to be targeting the administration recently.

Attachments: FOIA Request Flint Water.doc

Political flank cover out of City of Flint today regarding the spike in Legionnaires cases. See enclosed. Also, area ministers put a shot over the bow last night in MIRS with a call for Snyder to declare state of emergency there and somehow 'fix' the water situation.

It may be very advantageous to get Treasury, Gov's office, DCH, DEQ and Flint EM around a table Monday to do the following:

1. Update on what the City is doing.
2. Update on what County Health department is working on.
3. Discussion of what we might all do next.
4. Coordination of communication / messages.

Did not want to reach out to Dennis without your approval / support. Please advise.

Subject: RE: Information Request and Documentation

Mr. Henry,

The January 27, 2015, FOIA request you provided was directed to the City of Flint, not the DEQ. The DEQ has no record of a FOIA request from your office for such information. It is our understanding that the City has responded to your FOIA request, has helped you adequately redefine your request within the City's scope of public record to address such ambiguities as "any additional areas of concern", and provided you with additional information beyond the scope of your request.

The DEQ fully recognizes the public health threat posed to individuals that contract Legionnaires' Disease with the understanding that the disease is not contracted by ingestion of potable water and therefore not regulated under the federal Safe Drinking Water Act. Your email below claims that you have explicitly explained the situation to our Department. However, since contacting our office early last October to indicate a rise in cases, we have not received any further information regarding your epidemiological investigation into this matter.

Further, conclusions that legionella is coming from the public water system without the presentation of any substantiating evidence from your epidemiologic investigation appears premature and prejudice toward that end.

It is highly unlikely that legionella would be present in treated water coming from the City of Flint water treatment plant given the treatment plant's use of ozone along with complete treatment and chlorine disinfect contact time to comply with federal surface water treatment rules for potable water. Detections of total coliform or heterotrophic bacteria in the City's public water distribution system indicate an environment where bacterial growth may be

supported. However, there is no direct correlation that can be made to the presence of legionella. While total organic carbon levels in potable water may serve as a food source for bacteria growth in private plumbing system, water temperatures in the City's distribution system are below legionella growth range, and chlorine residual levels would also limit such growth.

Our office agrees that water main breaks, water leaks, and system repairs are possible vectors for legionella to enter the public water system. These should be investigated as part of your epidemiology. DEQ staff can be made available to assist GCHD and the City regarding such matters, but to date no request by GCHD for any such meeting has been received, let alone declined as alleged in your email.

If GCHD is seeking assistance to complete its epidemiological investigation regarding this matter, such resource requests should be directed to the Michigan Department of Community Health. Our Office agrees that a multi-agency partnership would be beneficial to move forward and develop a unified response. In that respect, if our Office can be of any further assistance you may contact me directly.

Subject: Information Request and Documentation

Hello everyone,

The Genesee County Health Department has made several written and verbal requests for specific information since October, 2014, including a Freedom of Information Act Request on January 27, 2015. The information still has not been received and the city's lack of cooperation continues to prevent my office from performing our responsibilities.

The Genesee County Health Department has the responsibility to conduct illness investigations and consider all potential sources, this is not optional. In 2014, Genesee County experienced a significant increase of confirmed Legionella illnesses relative to previous years. Legionella can be a deadly, waterborne disease that typically affects the respiratory system.

The increase of the illnesses closely corresponds with the timeframe of the switch to Flint River water. The majority of the cases reside or have an association with the city. Also, McLaren Hospital identified and mitigated Legionella in their water system. This is rather glaring information and it needs to be looked into now, prior to the warmer summer months when Legionella is at its peak and we are potentially faced with a crisis.

This situation has been explicitly explained to MDEQ and many of the city's officials. I want to make sure, in writing that there are no misunderstandings regarding this significant and urgent public health issue. The Trihalomethane issues "pale in comparison" to the potential public health risks of Legionella.

I am submitting the attached FOIA request again and requesting that the legal obligations of the request are met. If the information is not available, please let me know. In the past, I have requested to meet with the water plant staff and MDEQ regarding Legionella concerns. I did not receive a response from the water plant staff and MDEQ declined. I think it is in the best interest for all stakeholders that we meet and discuss the issues.

Respectfully,

Jim

RE: Flint Water Plant Information Request

Dear FOIA Coordinator,

Under provisions of the Michigan Freedom of Information Act (MCLA 15.231 et seq; MSA 4.1801 (1) et seq) please provide copies of the following:

Provide specific water testing locations and laboratory results within the City of Flint public water system for Coliform, E-coli, Heterotrophic Bacteria and Trihalomethanes from January 1, 2010 to January 27, 2015. Provide any additional water testing that has been conducted for identifying potential public health risks. Include any available mapping of the water testing areas.

Provide a map delineating the boundaries of the City of Flint water distribution system. Include any changes to the boundaries, along with corresponding dates from January 1, 2014 to January 27, 2015.

Provide a map or list of locations, detailing dead ends, pooling, low pressure and any additional areas of concern within the City of Flint water distribution system. Include any modifications to the water distribution system addressing concerns, along with corresponding dates from January 1, 2014 to January 27, 2015.

If you determine that any of the requested information is exempt from disclosure, please detail what is being withheld and cite the exemption under FOIA. I anticipate the request being filled within five working days of receipt of this letter, as provided under FOIA. Please contact me at (810) 257-3618 if there are fees associated to comply with this request.

Sincerely,

Jim Henry

Detroit Preachers To Call For Snyder's Intervention In Water Crisis

The Change Agent Consortium and Preachers of Detroit will collect bottled water for Flint residents at 7 p.m. Friday in Detroit and plan to call for action from of Gov. Rick **SNYDER.**

David Alexander **BULLOCK**, the Change Agent Consortium national spokesperson, said in a statement that the situation in Flint demands immediate state action.

"We call on Governor Snyder to declare a state of emergency in Flint. He should ensure all citizens have access to clean water, institute a moratorium on water bills until the water source is safe and reverse the bad public policy decision of the emergency manager to use a contaminated water source in Flint," Bullock said in the statement.

The Friday water collection event will take place at Tony V's Tavern, 5756 Cass Ave., in Detroit.

Subject: RE: LeeAnn Walters Draft

Brad – below is our draft response to Ms. Walters in followup to our meeting at the Governor's Office. Thought you might like to review the draft before we send it out. Also, is there anyone else that should see this before it is sent?

Dear Ms. Walters,

I wanted to update you regarding our Department's findings related to questions raised during our meeting at the Governor's office on August 4. I apologize for the delay in getting back to you.

Lead and Copper Monitoring

Regarding Flint lead and copper compliance monitoring for the January – June 2015 period, the City has confirmed that all lead and copper samples collected throughout the City, whether routine sites or customer requests, were sent to the State of Michigan lab for analysis. Individual sample results are provided to the property owner within 30 days of receiving the lab results in accordance with the Michigan Safe Drinking Water Act (Public Act 399, 1976 Administrative Rule 410(5). Results from the State of Michigan lab are provided directly to our Office.

Staff have confirmed that the lead 90th percentile compliance calculation of 11 parts per billion is based on 69 samples that met the appropriate sampling location site criteria, and met the sample collection site and collection protocol requirements of the Safe Drinking Water Act for this monitoring period. A minimum of 60 samples were required for this monitoring period. As indicated during the meeting, the City's sampling for lead complies with the Action Level standard of 15 parts per billion, but based on the population served by the City and these results, the City will need to make a recommendation to the MDEQ on how they will fully optimize their corrosion control treatment. These next steps continue to follow the requirements of the Lead and Copper Rule.

Samples collected at your residence of PPI were not included this compliance determination as you utilize a whole home filter. As stated in the Michigan Safe Drinking Water Act (Public Act 399, 1976 Administrative Rule 710a, Lead and Copper in tap water; monitoring requirements) "Sampling sites may not include faucets that have point of use or point of entry treatment devices designed to remove inorganic contaminants." Such treatment alters the water chemistry and water quality such that it is no longer representative of public water from the City's distribution

system. Therefore, the City cannot use samples collected at your residence as part of its determination for public water system compliance with the lead or copper action level standard.

Sample Summary (samples taken at your residence)

For your information, we are providing the information that we've gathered regarding samples collected at your home. Our records indicate between February and June of this year there were six samples collected by either you or Mr. Mike Glasgow with the City of Flint, and submitted to the State Laboratory for analysis as follows:

February 11, Bathroom tap, collected at 10:20 AM by Mike Glasgow. This sample was analyzed for aesthetic metals (copper, iron, manganese, and zinc) which does not include lead analysis.

February 18, Kitchen tap, collected at 7:15 AM by you. This sample was analyzed for lead (104 parts per billion) and copper (non-detect).

February 25, Kitchen tap, collected at 10:26 AM by Mike Glasgow. This sample was analyzed for metals including lead. All results (including lead) were non-detect except for Barium 0.01 parts per million. The result for Barium was well below its maximum contaminant level of 2 parts per million.

March 3, Kitchen tap, collected at 6:00 AM by you. This sample was analyzed for lead (397 parts per billion) and copper (non-detect).

March 18, Kitchen tap, collected at 11:10 AM by Mike Glasgow. This sample was analyzed for lead (4 parts per billion) and copper (non-detect).

April 2, Pre-point of service, collected at 8:00 AM by you. This sample was analyzed for lead (707 parts per billion) and copper (110 parts per billion).

Lead Education/Outreach

As we discussed during the meeting, we support efforts to educate homeowners about the sources of lead in their private residence, provide guidance measures to reduce the potential for lead exposure, and provide information on resources for lead abatement. Along those lines, our Office has been in contact with the Department of Health and Human Services, Environmental Health Division, Healthy Homes Section and had some preliminary discussions about a public education and assistance campaign regarding household lead issues, guidance and abatement.

Lead monitoring by public water systems serves a dual purpose. The first purpose is to ensure the public water supply is adequately treating its water to address corrosion potential and help limit lead exposure. The second purpose is to inform homeowners about lead levels within their individual residence so that they can make educated choices regarding their own exposure risk.

pH Results

During the meeting concerns were also expressed regarding pH levels within customer plumbing systems. As you may know, pH has no associated contaminant level as it is simply a numeric scale used to specify the acidity or alkalinity of a solution. The City of Flint conducts daily monitoring of pH values on both its raw and finished (treated) water at the City's water treatment plant as part of its operations. The City is also required to conduct water quality parameter monitoring in the distribution system, which includes pH. Samples are analyzed in accordance with Standard Methods using properly calibrated analytical equipment. Results for pH from these samples are summarized below.

Since late April 2014 – June 2015, the following pH conditions were reported:

Water Treatment Plant – Finished Water plant tap pH range = 7.07 minimum to 9.9 maximum, overall average 7.7, measured daily. We believe the 9.9 is a one- time anomaly from softening treatment.

Distribution System – Water Quality Parameters taken from 25 sample sites located throughout and monitored quarterly
July – Sept. 2014: pH 7.71 average, range 7.56 – 7.86
Oct. – Dec. 2014: pH 7.88 average, range 7.62 – 8.10
Jan. – March 2015: pH 7.81 average, range 7.60 – 7.99
April – June 2015: pH 7.63 Average, range 7.48 – 7.80

In addition, the City's treated water contains alkalinity, which is a measurement of the buffering capacity of water to resist a change in pH. As you can see from the water quality parameter monitoring results above there has been very little change in pH within the City's distribution system. The pH levels described within customer site piping or premise plumbing systems are believed to be the result of onsite treatment and not representative of water quality shown to be occuring in the public water supply system.

Consumer Confidence Report

Finally, there was confusion during the meeting regarding the City's annual water quality report, the Consumer Confidence Report which we have since been able to clarify.

The City of Flint issued two separate Consumer Confidence Reports (CCR's) in 2015 covering the water quality data from 2014. One report was for the period of January – April 2014 when the City was obtaining water from Detroit (DWSD). And a second report was for the period April – December 2014 when the City was using the Flint River and its own Water Treatment Plant.

The CCR for DWSD water was mailed to customers in June. The Flint River based CCR was mailed to customers in mid-July, delayed due to issues with the printing contractor. We agree that having two separate reports caused confusion. We are working with the City to ensure both reports are posted to the City's website and both are made available when requested by customers. Should the City choose to create separate CCR's during the year that the City of Flint connects to the Karegnondi Water Authority we will work with the City to provide more clarity and try to have all material included in a single mailing.

The DWSD based CCR is the one community members had at the meeting, while the DEQ brought a copy of the Flint River based CCR. As separate and distinct sampling was done under each source, this explains the discrepancy in the values and monitoring periods being reported in the respective CCR's.

We appreciate your interest in these matters and hope this has addressed many of the questions brought up during our meeting. I would like to provide this information to both Dr. Sullivan and Ms. Mayes, but I do not have their contact information. I'm hoping you can share this with them and any others that may be interested.

Sincerely,

From: Jason Lorenz <jlorenz@cityofflint.com>

Subject: PRESS RELEASE: MDEQ Testing of City of Flint Water Shows TTHM Levels are Well Below the Required Action Level, City No Longer in Violation
Attachments: Water Quality Update 9.2015.pdf

For Immediate Release

MDEQ Testing of City of Flint Water Shows TTHM Levels are Well Below the Required Action Level, City No Longer in Violation

Flint, Michigan – September 3, 2015 – The City of Flint has made significant improvements to its water treatment process and distribution system. Annual average results show all locations are within acceptable limits for total trihalomethanes (TTHM) and work continues to ensure that the average stays below the acceptable level. Flint's TTHM levels have now been below the actionable level for four consecutive quarters, long enough to bring the City out of violation with the Safe Water Drinking Act.

Installation of the Granulated Activated Carbon filter mediums in July has had a significant impact on the reduction of total organic carbon (TOC) and is expected to continue to do so. TOC contact with chlorine can lead to the creation of the chemical byproduct trihalomethanes. By reducing the amount of TOC in the treated water, the amount of TTHM in the water fell as a direct result.

"The City of Flint is continuing to improve its water system including both the areas of treatment and distribution," said Mayor Dayne Walling. "As the issue of trihalomethanes comes under control and the City is no longer in violation of safety standards, it will work with the MDEQ on implementing water optimization measures to reduce the corrosive effects of water on older pipes and home service lines." Older pipes and service lines can contain lead solder which can leach into the water over time.

Flint has been looking at the water optimization option for some time and is now looking at taking accelerated steps toward implementation. According to the MDEQ, a typical water optimization plan can take up to five years to complete, as in the case of the Detroit Water and Sewerage Department. The City of Flint plans to have its water optimization measures in place by the beginning of 2016. This measure, combined with the ongoing

improvements to the distribution system wherever possible, will improve water quality and extend the performance of the City's aging infrastructure.

"The City of Flint has been in constant communication with the MDEQ in our continuing efforts to upgrade and improve our water system," said Director of Public Works Howard Croft. "We have received assurances from them that every step we have taken has been in line with their recommended actions. The City will continue to work to ensure safe, quality water to its residents, businesses and visitors."

The City of Flint will continue to provide updates on its water progress through its website, cityofflint.com. Anyone with water issues is encouraged to call 810-766-7202 so that they can be addressed. Residents wishing to receive a free and independent in-home water test can call 810-787-6537 or email flintwater@cityofflint.com.

Subject: Reporter seeking a response to Virgnia Tech's Flint Water Study findings
Importance: High

Dear Mr. Wurfel,

After testing more than 250 homes in Flint, researchers at Virginia Tech have continued to find dangerously high levels of lead in many of the homes being sampled.

They are unequivocal in their findings, stating that: "Flint has a very serious lead in water problem."

These results run contrary to the city and MDEQ's assertions that the city of Flint is in compliance with U.S. EPA Lead and Copper Rule compliance standards. In fact, based on Virginia Tech's results – which are much more extensive, having tested nearly four times as many homes as the city tested during the first half of 2015, and the VT researchers have not specifically target high-risk homes, as the city is required to do for the LCR monitoring – the city is actually well out of compliance.

I was hoping you would be able to provide the MDEQ's position regarding VT researchers' purported findings, and the contradictory conclusions..

Virginia Tech's methodology and results have been posted on a web site dedicated to the project (flintwaterstudy.org/), so it is clear from their end how they have approached this project, and exactly what they've done, and what they've found.

It would be very helpful to have the MDEQ's views on all this for my upcoming story.

I am working on a deadline and would very much appreciate a response by the end of the day tomorrow, Sept. 11.

I appreciate any help you can provide in my reporting on this very important public health issue.

Sincerely,

Curt

City Administrator Statement Regarding the Possibility of Additional Water Testing

Flint, Michigan – September 21, 2015 – The following is a statement from the City Administrator regarding the possibility of additional testing being conducted on Flint's water.

"The City of Flint has no problem with cooperating in additional testing. In fact, at this time we are already taking the steps necessary to improve Flint's water including a plan to add a corrosion inhibitor into the treatment process in addition to ongoing efforts to fix problems in the distribution system. The City also continues to offer free and independent testing so that all customers understand the water quality in their homes, including any problems with lead. Our focus has been and will continue to be to provide safe, quality water to our customers."

Blood Lead Levels in Flint Talking Points
September 24, 2015

- The results of the Hurley Children's Hospital are under review by the Michigan Department of Health and Human Services.
- The analysis that Hurley conducted is different from the way MDHHS has analyzed data regarding blood lead levels in Flint.
- MDHHS is looking to see if we can replicate the results of the Hurley study to see how they achieved their results.

Differences in Analysis

- MDHHS data provides a much more robust picture of the entire blood lead levels for the Flint area, and specifically, accounts for data over the full course of the past five years.
- Looking at the past five years as a whole provides a much more accurate look at the seasonal trends of lead in the area.
- Seasonal exposure is higher in the summer for a variety of reasons including children playing outside in the soil, and when windows are open and lead paint is more likely to be in the air. This seasonal increase would be unrelated to the water system.
- Our data includes children from the entire city, including all medical facilities, rather than just Hurley, has a larger age group of children, and includes a much larger sample size.
- The MDHHS analysis looks specifically at the first elevated blood lead level for each child, which provides an accurate picture of when first exposure occurred.
- The Hurley data includes a smaller sample size, much more limited time period (January-September of 2013 and 2015 only), and a smaller age group of children.

WIC Children

- In homes with infants on WIC, if the household has documentation from an official source of unsanitary water supply issues, that family may be eligible to receive ready-to-feed formula. Families should contact WIC to see if they are eligible.
- Each household would have to be looked at on an individual basis.
- WIC cannot cover bottled water.

Subject: Flint Water

Flint doctors from Hurley, etc., today are holding a news conference to urge Flint to stop using Flint River water ASAP because of alarming lead levels in kids. This is based on blood tests taken since January.

As you know, water quality has been a big issue in Flint, although officials, including DEQ, say lead levels are within limits. Now, doctors are speaking up and saying it's a public health crisis.

What is the governor's reaction? Should Flint stop using the water?

Thanks.

Subject: Flint water questions

Hello Nina,

The health and safety of our residents is always the first priority, and that includes ensuring clean, safe drinking water, especially for children. The state continues to work with Flint leaders on their water questions, including through Mayor Walling's technical advisory board. That board includes outside experts and studies data and offers recommendations. The Department of Environmental Quality and the Department of Health and Human Services also are testing water and working with Flint residents on issues related to what they can do if they have concerns about the pipes in their homes.

Angela at DHHS -- 517-373-0860 -- and Brad Wurfel at DEQ -- 517- 230-8006 -- are standing by with detailed responses about various aspects of the Hurley report.

Subject: Absolutely astounding editorial by Flint Journal

This is just – irresponsible.

http://www.mlive.com/opinion/flint/index.ssf/2015/09/abandon_flint_river_for_drinki.html#incart_river_home

This switch was made while Flint was under control of a state-appointed emergency manager, **and we call upon the governor to make this right for Flint citizens by brokering a return to Detroit water that won't bankrupt the city of Flint.**

Flint is in a crisis that was created in no small part by Snyder's hand-picked emergency manager and it is Snyder's job to fix this mess.

Officials have said that returning to Detroit water for the short term is not fiscally sound but that is not enough to justify staying with Flint River water. Flint is in the midst of a full-blown water emergency right now and it is incomprehensible that a solution cannot be found with our fellow Michiganders to deliver healthy water.

There is a lake full of healthy drinking water just an hour away and the pipes already in place to bring it here.

Clean water can be ours again.

Make the switch — now — before it's too late.

Subject: PRESS RELEASE: City of Flint Lead Advisory
Attachments: GCHD Lead in Water Fact Sheet.pdf; Lead Advisory Release.pdf

For Immediate Release

City of Flint Issues Lead Advisory

Flint, Michigan – September 25, 2015 – The City of Flint is issuing a Lead Advisory for residents to be aware of lead levels in drinking water after hearing concerns from the medical community. While the City is in full compliance with the Federal Safe Drinking Water Act, this information is being shared as part of a public awareness campaign to ensure that everyone takes note that no level of lead is considered safe.

The Genesee County Health Department has issued a fact sheet regarding lead precautions for residents. The fact sheet can be found on their website at www.gchd.us. Here are a few of the suggestions the Health Department recommends:

- Flush your cold-water pipes by running the water for approximately 5 minutes
- Use only water from the cold-water tap for drinking, cooking, and especially for making baby formula.
- Install a water filter that is NSF-certified for lead removal.

Lead contamination can leach into water from a home's lead water service lines, lead solder, and leaded plumbing materials including fixtures, faucets, and fittings. Older service lines with pipes and fixtures installed before 1986 can sometimes be more susceptible to lead issues due to materials used in the home such as lead based paint and lead pipes.

This message is meant as a precaution to residents and does not mean that all homes in the City will experience the same issue. Residents with concerns about lead service lines and lead in home plumbing fixtures are encouraged to contact the City's Utilities Division to schedule a free water testing by calling the Water Treatment Plant at 810-787-6537 and pressing #1 after prompted or by emailing flintwater@cityofflint.com.

The City of Flint is working proactively along with the County Health Department, the Michigan Department of Environmental Quality, and the U.S. Environmental Protection Agency to improve the water system throughout the City. An accelerated plan to add a corrosion control agent to our water within 30 to 60 days with expedited approval from the Michigan Department of Environmental Quality is already underway. This will reduce corrosion which can cause lead in old pipes to leach into the water.

This plan is in addition to Mayor Walling's letter requesting $30 Million in water infrastructure assistance funding from the State of Michigan. $10 Million of that request would be for the replacement of lead service lines in households to ensure that lead no longer presents a danger to the drinking water of our residents. As the letter states, "It is the City's position that the abatement of lead through the removal of lead containing pipes and fixtures in homes is the best long term solution to keeping our residents' water safe."

Mayor Walling further stated: "I am extremely concerned about the risks around lead with Flint's children and I will be working tirelessly to ensure the water is safe and all of our families have the information they need. I also will continue to pursue funding for infrastructure improvements and a comprehensive healthy homes initiative that addresses lead in paint and pipes. We have to get the lead out of our community to eliminate the threat of childhood lead poisoning."

The City of Flint continues working proactively with the County Health Department, the Michigan Department of Environmental Quality, and the U.S. Environmental Protection Agency to improve the water system throughout the City. The City remains committed to working with all of our partners in the Water Technical Advisory Committee to address all issues of public health and quality concerns that face the community. Updates on progress made in addressing this issue will be made during regular public meetings including City Council and other scheduled meetings. Information on this and all related matters will continue to be posted on the City of Flint's website, cityofflint.com.

Genesee County Health Department

Mark Valacak, M.P.H., Health Officer
Gary K. Johnson, M.D., M.P.H., Medical Director

How does lead get into my tap water?

Under typical circumstances, lead will dissolve into the water. The concentration of lead in drinking water can vary greatly, depending on the corrosiveness of the water, the type and age of the plumbing materials and the length of time that the water stands in the pipes. The highest levels of lead occur when very corrosive water stands motionless in lead or lead soldered pipe for long periods of time.

How do I know if my tap water is contaminated with lead?

The only way to know whether your tap water contains lead is to have it tested. You cannot see, taste, or smell lead in drinking water. There are different sampling methods for sampling lead in drinking water. To determine your household risk, it is recommended to take a first draw sample.

Does lead in my tap water cause health effects?

Lead can cause damage to the brain, red blood cells and kidneys. The greatest risk is to young children and pregnant women. Amounts of lead that won't hurt adults can slow down normal mental and physical development of growing bodies. Lead in water can be a special problem for infants, whose diets may be mostly liquids, such as baby formulas or concentrated juices mixed with water. Smaller bodies can absorb lead more rapidly than bigger ones. A child's mental and physical growth can be permanently harmed by too much lead. Risk will vary, depending on the individual, the circumstances, and the amount of water consumed.

What can I do to reduce or eliminate lead in my tap water?

Flush your cold-water pipes by running the water for approximately 5 minutes. The longer the water has been sitting in the pipes, the more lead it may contain. You can fill containers for later use, after the flushing process. Use only water from the cold-water tap for drinking, cooking, and especially for making baby formula. Hot water is likely to contain higher levels because it dissolves more lead.
You may choose to install a water filter that is NSF-certified for lead removal. If a water filter is installed, replace filters at least as often as recommended by the manufacturer.

Buy a lead-free faucet. The legal definition of "lead-free" still allows brass faucets to contain up to 8 percent lead. However, faucets marked with "NSF 61/9" and/or "California Proposition 65" meet stricter limits. Regularly clean particles from faucet aerators.

Is it safe to take a bath or shower, if my water has high lead levels?

Yes. Bathing and showering should be safe for you and your children, even if the water contains lead over EPA's action level. Human skin does not absorb lead in water. This information applies to most situations and to a large majority of the population, but individual circumstances may vary. Some situations, such as cases involving highly corrosive water, may require additional recommendations or more stringent actions.

Who do I contact for more information?

The local water authority is always your first source for testing and identifying lead contamination in your tap water. You can visit the City of Flint Website at www.cityofflint.com or contact the Flint Water Department at 810-787-6537.

Hi Sara - A little confused by your response. Not sure if Darnell Earley was EM when the decision was made to use Flint River -- It may have been Michael Brown? He was EM when the decision was made to join the KAregnondi Water Authority but I'm not sure about the decision to switch to Flint River water and stop using DWSD, but regardless, he's an EM appointed by the governor -- but I'm unclear why you guys would sign off on something as important about the integrity of an entire city's water supply if you had "severe reservations"? Any light you could shed on that would be much appreciated.

Also, not clear what the Genesee Board of Commissioners has to do with it? They're a separate water customer and have continued to use DWSD while Karegnondi is under construction.

Our data analyst has been in contact with HHS. Story on that is forthcoming.

Just so you know ... that's not accurate history, Nancy. This change was pushed and direct request of Genesee Co Board of Commissioners AND city council (7-1) and mayor at the time. We had severe reservations about switch but ultimately was nearly unanimous request from local local level that Treasury signed off on. (And FYI double checking, but nearly certain EM at time was not Darnell E.)

Not that any of that matters, Nancy.
The bottom line is that we have been working hard to do everything possible to play a supportive role and work in collaborative fashion across all levels of government with community, faith & business leaders, residents, etc.

Protecting public health is paramount and safe, clean, accessible drinking water is essential. That's what we solely focused on helping ensure.

Highly recommend you reach out to state Health & Human Services team for how this data set was spliced and diced. That's key to understanding. They can walk through for you and Freep team.

Thanks much,
SW

Potential answer for Nancy:

It's important to remember that the emergency manager had the final say on making the change, but did so at the strong urging of Flint city leaders. This was not a decision that was forced upon the city.

Emergency managers often try to work closely with mayors and city councils, getting recommendations from the local communities they are serving. The decision to make the switch during the construction of the Karegnondi pipeline came after an 8-1 vote by the City Council and strong endorsement by the mayor and Genesee County leaders. The move also came after a series of upgrades to Flint's water treatment plant.

Answer on Darnell: On November 1, 2013 Earley will succeed Michael Brown as Flint's emergency financial manager.[3] Earley was appointed to be emergency manager for Detroit Public Schools on January 13, 2015

Subject: RE: Flint water

Hi Sara - A little confused by your response. Not sure if Darnell Earley was EM when the decision was made to use Flint River -- It may have been Michael Brown? He was EM when the decision was made to join the KAregnondi Water Authority but I'm not sure about the decision to switch to Flint River water and stop using DWSD, but regardless, he's an EM appointed by the governor -- but I'm unclear why you guys would sign off on something as important about the integrity of an entire city's water supply if you had "severe reservations"? Any light you could shed on that would be much appreciated.

Also, not clear what the Genesee Board of Commissioners has to do with it? They're a separate water customer and have continued to use DWSD while Karegnondi is under construction.

Our data analyst has been in contact with HHS. Story on that is forthcoming.

Subject: Re: Flint water

Just so you know ... that's not accurate history, Nancy. This change was pushed and direct request of Genesee Co Board of Commissioners AND city council (7-1) and mayor at the time. We had severe reservations about switch but ultimately was nearly unanimous request from local local level that Treasury signed off on. (And FYI double checking, but nearly certain EM at time was not Darnell E.)

Not that any of that matters, Nancy.
The bottom line is that we have been working hard to do everything possible to play a supportive role and work in collaborative fashion across all levels of government with community, faith & business leaders, residents, etc.

Protecting public health is paramount and safe, clean, accessible drinking water is essential. That's what we solely focused on helping ensure.

Highly recommend you reach out to state Health & Human Services team for how this data set was spliced and diced. That's key to understanding. They can walk through for you and Freep team.

Thanks much,
SW

Ed Kurtz was the EM at the time. Important to remember that the emergency manager had the final say - with ultimate sign off by Treasury-on making the change, but also did so at the strong urging of Flint city leaders. This was not a decision that was forced upon the city. Exact opposite actually.

Emergency managers often try to work closely with mayors and city councils, getting recommendations from the local communities they are serving. The decision to make the switch during the construction of the Karegnondi pipeline came after an 8-1 vote by the City Council and strong endorsement by the mayor and Genesee County leaders. The move also came after a series of upgrades to Flint's water treatment plant, testing and an independent analysis of water rates and quality.

City shells out $4 million on plant since Detroit ended water pact

LENGTH: 482 words

URL: http://www.mlive.com/news/flint/index.ssf/2014/01/flint_spends_4_million_on_wate.html
By Dominic Adams
dadams5@mlive.com
The city of Flint has spent $4 million on its water plant in the eight months since Detroit ended its almost 50-year-old contract for selling water to the city.
An analysis by The Flint Journal/MLive.com found the city has spent more than $3.8 million on improvements and other work at the water plant since April, according to figures listed in resolutions posted on the city's website.
Efforts have included paying consultants for studies, paying a public water fee to the Michigan Department of Environmental Quality and spending more than $1.5 million to upgrade the switchgear for the power distribution to the facility's motor control center.
The Detroit Water and Sewerage Department director said it will stop selling water to Flint and Genesee County on April 17.
The move came after Flint agreed to purchase raw water from Lake Huron as a member of the Karegnondi Water Authority. The water will be pumped to Flint and treated at its plant.
"Some of the money that we're spending are on upgrades that are necessary for when we start getting our water from the KWA," City Council President Scott Kincaid said. "There are guidelines as far as the quality of our water."
In July, city officials said they still were trying to figure out whether they would renegotiate a temporary deal with Detroit while the KWA pipeline was built.
Kincaid said a decision about where the city will get its water during the KWA construction hasn't been finalized.
"I'm not concerned that Detroit is going to cut our water off," he said. "We're preparing our water treatment facility for the KWA, and when we do that, of course, that will give us the capability to take water from the Flint River."
Here's a look at five expenditures associated with upgrades at the water plant:
Electrical Distribution Upgrades: Emergency Manager Darnell Earley approved paying McNaughton-McKay Electric $1.51 million to upgrade electrical switchgear at the water plant Nov. 18. On the same day, Earley signed off on paying McNaughton-McKay $505,000 to replace switchgear at the city's Cedar Street pumping station.
New pump: McNaughton-McKay also received $349,710 from the city to replace an obsolete pump at pump station No. 4, according to the resolution.
Design work and construction engineering to use the Flint River: The city spent $1.13 million with Flint-based Lockwood,

Andrews & Newnam Inc. on design work, construction engineering and regulatory submissions that will allow the plant to be used to convert raw water from Lake Huron delivered via the KWA pipeline into drinkable water in Flint.
Cleaning up lime: The city paid Young's Environmental Cleanup $6,154.61 to remove inactive lime at the water plant, according to a resolution from Aug. 13.

Subject: RE: Flint water

Here's another story, about Darnell overseeing the process to get permission to pull water from the Flint River.

Flint Journal (Michigan)

April 6, 2014 Sunday
1 EDITION

Rushing to fix dump

LENGTH: 862 words

By Ron Fonger
rfonger1@mlive.com
After the state spent a dozen years trying to force Flint officials to clean up an unlicensed dump on Bray Road, the city is making a last-minute scramble to get that work done.
The reason? The city wants to use the same property in Genesee Township to dump sludge that will come when Flint makes the switch to the Flint River for the city's drinking water.
Flint and the Michigan Department of Environmental Quality have signed off on a consent order that requires the city to investigate and clean up what has been dumped at the 40-acre property. The requirement is a condition of using the site to dispose of lime sludge from the water treatment process.
The sludge is an unavoidable byproduct of softening river water before delivering it to homes and businesses, a move the city said it plans to make by the middle of this month.
"It is something the city has needed to take care of," said Jim Arduin, senior geologist in the DEQ's Office of Waste Management and Radiological Protection. "It's been on our radar for a long time -- at least 10 years."
The consent agreement for the Bray Road property, just north of Carpenter Road, and a series of letters dating to 1997 between the state and Flint officials were obtained by The Flint Journal/MLive.com through the Freedom of Information Act.
Flint Utilities Administrator Daughtery Johnson said the city hasn't used the property for sludge disposal since the 1960s but has dumped construction waste -- mostly broken concrete -- there.
Johnson said the city spent about $10,000 on an initial round of testing at the site to demonstrate the waste wasn't contaminated, but Flint wasn't able to meet all the DEQ's demands, including taking the solid waste to a licensed disposal facility.
He said the city's financial problems were the primary reason for past inaction.
Cost of compliance unclear
The 21-page consent agreement includes $2,500 in fines, in addition to the price of investigating and possibly moving or capping material at the dump.
City officials said it's not yet clear how much it will cost to comply with the consent order, but See dump, A12 dump they have few alternatives as they prepare to break away from buying water from the city of Detroit.
Without a place to send the lime sludge, Flint couldn't clean up its river water, and the Bray Road property already is connected to the treatment plant through miles of underground pipe.
The lagoon system on the property has two holding areas -- one to "dewater" the sludge and another from which the waste is pumped and treated with other sewage.
Arduin said little is known about the contents or volume of waste at the Bray Road property, leading to the consent order

requirement that the city determine what is in the open dump, remove or properly dispose of the waste on site and eliminate any surface water discharge to the Cornwell Drain.
The consent agreement said the lagoon system for handling lime sludge includes discharge points to the drain, and the property also includes an area where solid waste has been disposed of on the surface.
Arduin agreed that much of that waste appears to be asphalt and concrete -- byproducts of Flint's street maintenance and public works departments.
The consent order also requires the city to secure the property, which is at least partially bordered by a chain-link fence, plug the surface water discharge to Cornwell Drain, file a construction permit application for the lime sludge treatment, survey the property and report the extent of solid waste there, including any environmental contamination.
Worry for homeowners
The order clears the way for Flint to gain state approval of Flint River withdrawals and disposal of the waste -- and officials appear to be keenly focused on the work.
Just last week, the site, which had been quiet for decades, was busy again with trucks, heavy equipment and workers on the ground.
Neighbor James Lee said dumps in the area, near Bluebell Beach, are a gray cloud over homeowners -- as are plans to bring fresh sludge to the property.
"Nobody knows what was put in it before they shut it down," said Lee, who has lived on Bray Road for 25 years. "It is a constant worry."
Genesee County Drain Commissioner Jeff Wright, whose office oversees the Cornwell Drain, said he doesn't believe the property has an unmanageable environmental problem.
"I think what they are going to do is improve the situation," he said. "What they are doing is going to make the overall situation better."
The consent agreement comes as Flint officials play a game of beat the clock in disconnecting from the Detroit water supply and beginning to draw water from the Flint River instead.
Emergency Manager Darnell Earley said Friday he expects the city to have its permit allowing for river water withdrawals to start this week, and Arduin said that could not have happened without resolving the Bray Road dump issues.
Flint officials have said their plan is for people in the city to drink Flint River water until the Karegnondi Water Authority pipeline project is complete in 2016.
Genesee County and Flint have signed capacity agreements, committing to buy water from the KWA in the future.

Subject: Free Press Request for Comment from DE on Flint Water-RESPONSE FOR REVIEW

Importance: High

Sara, Dave, Terry,

Mr. Earley got a request from Freep's Nancy Kaffer for a comment on the Flint Water situation. She is doing a column for Sunday's paper that is a follow up to the paper's story that ran yesterday on Flint water quality.

She asked for his comment, she said, since water system decisions were made under his term as EM.

The following is the statement that he would like to send to Nancy. Her deadline is, as always, rapidly approaching. Apologies for short turn-around time.

"The decision for Flint to join the Karegnondi Water Authority and to leave the Detroit Water and Sewerage System was made under the authority of previous Flint Emergency Managers prior to my appointment in October 2013. And, while the deal to sell the pipeline had been in process as I assumed my position, it was finalized after thorough review and with the health and well-being of all citizens -- from small children to senior citizens and everyone in between -- taken into consideration. An even bigger concern that we must all be paying attention to is the aging infrastructure and water distribution systems in all of our urban communities -- many of which are more than 100 years old. Where the focus should be placed moving forward is not on what we do in the interim between now and when the new system is complete, but what is done in the long-term to replace the crumbling water distribution system that exits throughout Flint and Genesee County. Iam confident that the city of Flint is following the standards of the State of Michigan's Department of Environmental Quality for safe water compliance, as it should."

Please let me know if you have any issues/edits.

Thanks,

Michelle

Senate Minority Leader Jim Ananich Urges Governor, State Action in Flint

FLINT, Mich.—Senate Minority Leader Jim Ananich (D-Flint) issued the following statement:

"My constituents and I believe the state must act urgently to provide concrete solutions to the public health crisis in the City of Flint. In speaking with Governor Snyder and his key aides today, I stressed the need to work together on a number of initiatives that will ensure safe water for Flint residents.

"My formal request included immediate and long-term solutions, including strong consideration for switching back to the Detroit water source until the Karegnondi Pipeline Authority project is complete. Anything less than an aggressive, comprehensive approach is simply unacceptable."

A copy of Senator Ananich's letter to Governor Snyder can be viewed here.

Subject: seeking comment on ananich

Dave:
We just received this and understand the governor also spoke to Congressman Kildee today about the potential for state funding for lead clearing water filers.

As you see, Ananich is asking for strong consideration of switching back to the Detroit water source.

I'm interested in a comment from your office on these two suggestions, particularly the Detroit water switch since Ananich has put this in writing and a grass roots group that includes local pastors asked for the same thing in a news conference this morning.

Thanks,

Senate Minority Leader Jim Ananich (D-Flint) issued the following statement:

Subject: Water responses

Shorter verision:

Hi Danielle,

Gov. Snyder spoke with Sen. Ananich this morning about how the state can continue working with Flint city leaders. We just received the letter from the senator and are reviewing his suggestions. We deeply share the senator's commitment to making sure all state residents have access to clean and safe water.

The governor and state agencies have been closely working with Flint leaders on their infrastructure challenges for months, including about providing $4.2 million in grants and restructured loan financing to provide resources needed to locate and fix infrastructure problems and add the carbon filtration system.

It's important that people have accurate information about their health and water. The Department of Environmental Quality and the Department of Health and Human Services are testing water and working with Flint residents on issues related to what they can do if they have concerns about the pipes in their homes.

Thanks!

Dave

Long version:

Hi Nick,

Gov. Snyder believes all state residents to have access to clean, safe water.

The governor and the state agencies have played a highly visible role in working with Flint city leaders with their infrastructure challenges -- and will continue to do so. We understand why people are frustrated, and also want to make sure people have accurate information and know where they can go if they have questions about their health and the water connections in their home. The health and safety of Flint residents is always the first priority, and that includes ensuring there is clean, safe drinking water -- especially for children.

The state so far has provided $4.2 million in grants and restructured financing to help the city locate and fix some of the problems with its water infrastructure and add the carbon filtration system. Several state agencies continue to work with Flint leaders on their water challenges including through Mayor Walling's technical advisory board. That board includes outside experts and members will study data and offer recommendations. The Department of Environmental Quality and the Department of Health and Human Services also are testing water and working with Flint residents on issues related to what they can do if they have concerns about the pipes in their homes.

It's important to remember that the emergency manager had the final say on making the change, but did so at the strong urging of Flint city leaders. This was not a decision that was forced upon the city. Emergency managers often try to work closely with mayors and city councils, getting recommendations from the local communities they are serving. The decision to make the switch during the construction of the Karegnondi pipeline came after an 8-1 vote by the City Council and strong endorsement by the mayor and Genesee County leaders. The move also came after a series of upgrades to Flint's water treatment plant.

It's also important to remember that switching back to Detroit water will not necessarily have the effect that some expect. Flint has long-term challenges with its water infrastructure that need to be addressed.

Subject: RE: FOR IMMEDIATE RELEASE: Senate Minority Leader Jim Ananich Urges Governor, State Action in Flint

I understand Flint has lead in its older pipes and that's probably a likely source for these elevated lead levels. But I'm more interested in why was DWSD asking for $1.5 million more a month for a short-term two-year water contract from Flint? That's what seems to have caused Flint officials to pull out of DWSD early and start pumping water from the Flint River. Or am I missing something here?

Is there someone in the administration who was involved in this decision last year who I could speak with, even if just on background.

Subject: RE: FOR IMMEDIATE RELEASE: Senate Minority Leader Jim Ananich Urges Governor, State Action in Flint

HI there Chad –

Saw that you called, but am trapped on a conf call at the moment.

On this issue and your Qs would say:

Gov. Snyder spoke with Sen. Ananich this morning about how the state can continue working with Flint city leaders. We believe protecting public health is paramount and safe, clean, accessible drinking water is essential . That's what we are focused on helping ensure and deeply share the Senator's commitment to helping address the issue. We are reviewing his ideas.

The governor and state agencies have been closely working with Flint leaders on their infrastructure challenges for months, including providing $4.2 million in grants and restructured loan financing to provide resources needed to locate and fix infrastructure problems and add the carbon filtration system, additional testing and helping identify and provide filters.

We understand that residents are frustrated, and also want to make sure they have accurate information and know where they can go if they have questions about their health and the water connections in their home. The health and safety of Flint residents is always the first priority, and that includes ensuring there is clean, safe drinking water --

especially for children. The MI Depts of Environmental Quality and Health and Human Services are testing water and working with local agencies and Flint residents on issues related to what they can do if they have concerns about the pipes in their homes.

{On background: You probably recall the issues and challenges re: the history with DWSD. It's also important to note that switching back to Detroit water will not necessarily have the effect that some expect. Flint has long-term challenges with its water infrastructure that need to be addressed.}

Thanks and hope this helps.

Sara,
Got a deadline question here about Senator Ananich's letter to the governor. Does he support having the city switch back to Detroit water until the Karegnondi pipeline is complete? Is there a plan being put together by the administration to deal with these elevated levels of lead in Flint children found by researchers at Hurley Medical Center? Can your characterize the governor's conversation with Senator Ananich today? Did he make any kind of commitment to take action?

Can you give me some details of the things that you think are wrong? We always want to know about mistakes or errors.

Also, I asked you last week to comment on the situation -- still interested in hearing what you are doing to respond to the water situation in Flint, which has resulted in an increasing number of children with elevated blood-lead levels. We're doing a follow-up, and would love to know what specifically the governor's office is doing.

Subject: RE: Flint

I'm still in disbelief and simmering to be quite frank over that column, Nancy. That was fairly unbelievable - 'resounding yawn'? Seriously? You picked and chose facts and components to weave together a set narrative, leaving out so many critical pieces of all the state, Governor and administration have done to help the city and its residents in this situation.

There has been and there will be more that we're doing on this front -- again do everything possible to play a supportive role and work in collaborative fashion across all levels of government, with the community, faith and business leaders, and residents. Protecting public health is paramount and safe, clean, accessible drinking water is essential. That's what we solely focused on helping ensure.

Back in touch later.

Subject: PRESS INQUIRY | The Guardian re: Flint

Hi all,

I wanted to see if the governor's office would have any response to the call from Senate minority leader Jim Ananich to have Flint reconnect with Detroit's water system. It's for a story I'm working on for the Guardian, regarding the increase in lead levels in the blood of Flint children ever since the city switched to using the Flint River.

Additionally, can you confirm whether or not the governor's office backed plans from Flint's emergency manager to transfer from using DWSD to the Flint River?

I'm working on a 5 pm deadline for tomorrow (9/30). I appreciate your time and look forward to the response.

Best,

Flint Drinking Water Press Conference Communications Plan
Oct. 2, 2015

Situation overview:
In May 2014, the city of Flint began drawing its drinking water from the Flint River, and left the Detroit Water and Sewerage Department. Recently, some city residents and outside activists have expressed concern about levels of lead in the drinking water. Although repeated testing demonstrates the water leaving the city of Flint's plant is free of lead contamination, Flint contains many old homes with lead plumbing, and some lead gets into individual homes' drinking water.

Talking points:

- The water leaving Flint's Water Treatment Plant is free of lead contamination; however, the state recognizes many older homes have lead pipes and therefore some measure of lead in the water that comes out of their taps
- While this is a problem with individual homes, the city, state and federal governments have come together to provide a number of actions to combat the issue.
- This plan includes both short- and long-term solutions, and focuses on increasing access to water testing, offering additional precautions for families with lead plumbing in their homes, and providing long-term solutions to address the city's water infrastructure.
- The 12 action steps:
    - Immediately test all Flint public schools to ensure that drinking water is safe. Testing will also be available at no cost to any other school in Flint.
    - Expand water testing of at-risk properties.
    - Offer water testing at no cost to Flint residents to assure water is safe.
    - Speed up the implementation of fully optimized corrosion controls in the Flint drinking water system.
    - Convene the city's safe drinking water "Technical Advisory Committee" to ensure the best technology, practices and science are being utilized, and add an expert from the EPA's Office of Research and Development to the group.
    - Gov. Rick Snyder names Dr. Eden Wells as the Flint Drinking Water Public Health Advisor.
    - Continue to disseminate advisories recommending residents flush their cold water pipes before use, as well as use only water from the cold water tap for drinking, cooking and especially for making baby formula.
    - Provide filters to residences of Flint.
    - Offer premixed formula if test results indicate high levels of lead.
    - Accelerate water system improvements to address replacement of lead service lines.
    - Expedite Completion of Karegnondi Water Authority.
    - Facilitate conversation between the City of Flint and DSWD.

Subject: Concerned Pastors for Social Action - Meeting with Governor's Office

Hello Sara,

My name is Damon Maloney with ABC12 News in Flint.
I'm writing to inquire about a meeting being held tomorrow morning in Lansing between the Governor's Office and the group 'Concerned Pastors for Social Action' from Flint.

We're hearing the meeting centers around Flint's water quality concerns and is scheduled for sometime around 9 o'clock.

From my understanding this meeting won't be open to the public, but I'm wondering if we can at least have a location of where it's taking place? We'll be looking for reaction after the meeting from locals.

Thank you,
Damon Maloney -810-877-3707

A new way forward in Flint

State regulatory leaders were disappointed by recent Free Press editorials mischaracterizing Lansing's oversight of the City of Flint's drinking water system. The paper's portrayal of the state as uncaring about drinking water quality and the community's exposure to lead are simply off the mark.

State and federal regulators run programs to monitor lead in drinking water and in kids' blood levels specifically to track lead impacts on our communities. Lead is a real concern, particularly in children, and we take our responsibility seriously.

But it is important to remember that lead is all around us. It is in soils, deposited for decades by leaded fuel and industrial processes. It is paint, in homes built in the mid-1970s or earlier. And it is unfortunately common in the plumbing and service connections of older homes, which is why the DEQ requires community water sources around the state to track and record it and take steps when levels surpass federal action thresholds.

Let's be clear: The Flint River is not contributing lead. The water leaving the drinking water plant is clean and safe. The water traveling through the distribution system also is free of lead. The lead issues are the result of water in homes that have lead service lines or lead plumbing. And because the contamination factor is at the homeowner level, it is difficult to track or assess with the kind of specificity customers would like to think regulators have. Two homes on the same block might have very different results from lead testing, based on what kind of plumbing they have and how homeowners use their water.

Moreover, the City's efforts to test for lead involve sending water sampling kits to homeowners and relying on them to participate and follow the sampling instructions, and that has been a long-standing challenge in Flint. This year, the City sent out 200 bottles in January and got 60 samples back by June. We must operate on the best knowledge we have available, and we only know what the customers let us know by participating in the City's testing.

Emerging data from local doctors, however, added to our knowledge enough to spark some unusual precautionary actions. They reported to the media that blood lead levels in Flint kids at their offices are up this year. It's still early to know exactly what that means, but because lead is a serious threat to children's development, we have decided to take some short-term precautionary measures and do more to learn exactly what is happening in the city.

The state today joined with local and federal authorities to present an 11-step action plan designed to produce a clearer picture of lead in the community's water, offer immediate protection for its kids and families with corrosion control and free lead water

filters, review and audit testing protocols, and immediately assess the schools to reassure parents their kids are not exposed to lead at the drinking fountains.

Critics in the community and at the Free Press have said we have been slow to respond to Flint's drinking water concerns. The truth is that local, state and federal authorities have been paying very close attention to Flint's drinking water all along, but we have the responsibility to check facts and use the knowledge we have to develop responsible, meaningful strategies that will help everyone clearly understand the real risk level and take appropriate actions.

We will be transparent with all we are doing and everything we determine. But Flint residents should also recognize our ultimate success depends on their help. Residents with lead concerns should have their home water tested – customers of Flint water can request it for free. Parents of younger kids should have their children get free blood lead level testing at the local community health department. Residents who receive a testing kit from the City should recognize that this is an important opportunity to learn about their lead exposure while helping the city better track the quality of the water they provide.

We are committed to doing all we can to protect drinking water and public health, in Flint and the rest of Michigan. Possibly the most difficult crisis to address in Flint right now is a crisis of public confidence. The plan set forth today should send the strong signal that residents can be assured the city, state and federal regulators are accountable, forthright and working hard to protect them. It is the community's responsibility to take the steps available to them as well. Ensuring public health is a public service, but the public can play a key role.

Leaders address ‘crisis of confidence’ with Flint water

Residents of Flint have been hearing concerning news about the municipal water supply for more than a year. Since the City switched water supplies and began using the Flint River as its source, some have complained that the water is different. State regulators have cited the system for various compliance issues.

More recently, voices within the community – and some from other states – have alleged state regulators failed to do their jobs. It simply is not the case. Leaders from the regulatory community today announced an 11-point plan to build our knowledge about lead in flint, better protect the community and restore public confidence in the regulatory framework.

Over the past year, the city has completed lead and copper testing required by law. Lead is a real concern, particularly in children. State and federal regulators run programs to monitor lead in drinking water and in kids’ blood levels specifically to track lead impacts on our communities.

It is important to remember lead comes from many sources, particularly in the state’s urban and industrial areas. It is in soils, deposited for decades by leaded fuel and industrial processes. It is paint, in homes built in the mid-1970s or earlier. And it is common in the plumbing and service connections of older homes, which is why the DEQ requires community water sources around the state to track and record it and take steps when levels surpass federal action thresholds.

Flint’s drinking water passed its lead and copper test. However, testing done by non-regulatory entities produced a different picture, creating confusion and concern – for residents of flint as well as city, state and federal regulators.

The lead in question does not coming from the Flint River. The water leaving the drinking water plant is clean and safe. The water traveling through the distribution system also is free of lead. The lead issues happen when the water reaches homes that have lead service lines or lead plumbing. This is important to know for two reasons: One, because the contamination happens at the homeowner level, it is very difficult to track precisely. And, the longer water sits in lead pipes, the more lead it takes on, so homes on the same block might have very different results from lead testing, based on what kind of plumbing they have and how homeowners use their water.

The City’s efforts to test for lead involve sending water sampling kits to homeowners and relying on them to participate and follow the sampling instructions, and that has been a long-standing challenge in Flint. This year, the City sent out 200 bottles in January and got 60 samples back by June. Regulators must operate on the knowledge available, and we only know what the customers let us know by participating in the City’s testing.

However, a recent announcement by local doctors that blood lead levels are rising in children residing in Flint's most at-risk zip codes added enough to the state's knowledge to spark some unusual precautionary measures. Experts are still working the data to determine exactly what it means, but the state takes lead seriously. Leaders have put forth an 11-point plan with short-term and long-term actions that will bolster our knowledge of the situation and provide a more accurate assessment of the threat level.

In the near term, the state will move immediately to provide free lead water filters for Flint water customers. We will test the drinking water at Flint schools. We will provide bottled water and formula to Flint mothers at risk. The system will be optimized for corrosion controls by the end of the month. These precautions will help protect the community while the state takes a deeper look at the drinking water system, the last round of test results and the testing protocols.

Flint residents should understand the state has been focused on Flint's water and Flint's kids for decades, but state leaders cannot make knee-jerk decisions based on unchecked allegations in the media. We have the responsibility to check facts and make decisions carefully, using the knowledge we have available to direct public resources.

Community participation plays a key role in our success. Residents who receive a testing kit from the City should recognize that this is an important opportunity to learn about their lead exposure while helping the city better track the quality of the water they provide. Residents with lead concerns should request a free home test from the city. Parents of young kids should take advantage of free blood lead level testing at the local community health department.

The plan set forth by the state speaks to a coordinated partnership among city, state and federal leaders. With community involvement, Flint's residents can be assured of more accurate and effective protection from lead exposure.

We're always glad to help, Damon - that's what we're here for. Please just reach out in advance in the future.

Stay tuned - as governor and team have noted, our administration has dedicated a lot of time and resources to work collaboratively on this issue as well as see what additional action items we can do and help with. We were hoping to have that wrapped up by week's end. As details get finalized, I know folks will be in touch.

More soon,
SW

Thank you for your help today- appreciate your hospitality.

Wanted to ask if a press conference is scheduled for tomorrow in any shape or manner dealing with Flint Water and the Future.

Thanks,
Damon

Here's the run of show as it stands. Did you want to add Nick's comments or change anything else on it? I'm not sure how much he works from prepared remarks.

Karen Tommasulo
Public Information Officer
Michigan Department of Environmental Quality
517-284-6716 | 517-599-5733
tommasulok@michigan.gov

On stage
Dan Wyant
Harvey Hollins
Nick Lyon
Dr. Eden Wells
Dayne Walling

Harvey Hollins

- Thank you all for being here today. I'm Harvey Hollins, Director of the Office of Urban Initiatives for Gov. Rick Snyder.
- We're here as representatives of local, state and federal government to talk about ensuring safe drinking water for everyone in Flint. We have with us today:
    - Nick Lyon, Director of the Michigan Department of Health and Human Services
    - Dr. Eden Wells, Chief Medical Executive for the Michigan Department of Health and Human Services
    - Dayne Walling, mayor of Flint
    - And Dan Wyant, director of the Michigan Department of Environmental Quality. Dan?

Dan Wyant

- Thank you, Harvey. And thank you all for being here today.
- We know many residents are concerned about their health and the health of their children. We understand many have lost confidence in the drinking water system, and we need to build that back up. And we recognize we need to do more.
- We have an action plan to announce today that will address both the short- and long-term issues.
- It focuses on increasing water testing, offering additional precautions for families with lead plumbing in their homes, and providing long-term solutions to address the city's water infrastructure.
- The plan includes:
    - Immediately test Flint public schools to ensure that drinking water is safe. Testing also will be available at no cost to any other school in Flint.
    - Expand health exposure testing of individual residences.
    - Offer water testing at no cost to Flint residents to assure water is safe.
    - Begin optimizing corrosion controls in the Flint drinking water system.
    - Convene a "Safe Drinking Water Technical Advisory Committee" to ensure the best technology, practices and science are being utilized, and add an expert from the EPA's Office of Research and Development to the group.
    - Accelerate water system improvements to address replacement of lead service lines.
    - Expedite completion of Karegnondi Water Authority.
- Now, I want to turn the mic over to my colleague Nick Lyon to discuss some of these plans in more detail.

Nick Lyon

- Provide water filters to residents of Flint.
- Expand a comprehensive lead education initiative.
- Gov. Rick Snyder names Dr. Eden Wells as the Flint Drinking Water Public Health Advisor.

Dr. Eden Wells

Discuss Hurley's data, concern about blood lead levels

Harvey Hollins

Bring up mayor

Dayne Walling

Talk about advisories issued, free water testing available, next meeting of the Citizen Advisory Committee.

An word on the where and when for tomorrow?

From: Wurfel, Sara (GOV) [mailto:Wurfels@michigan.gov]
Sent: Thursday, October 01, 2015 4:30 PM
To: Lynch, James
Subject: RE: Hey Sara.

Hi there Jim –

Would say this issue is one that we've been actively engaged on and our administration will be outlining a collaborative, comprehensive action plan tomorrow afternoon. We believe protecting public health is paramount and safe, clean, accessible drinking water is essential . That's what we are focused on helping ensure and working together across local, state and federal levels to bring all resources and ideas to bear.

Would add that the governor and state agencies have been closely working with Flint leaders on their infrastructure challenges for a while, including providing $4.2 million in grants and restructured loan financing to provide resources needed to locate and fix infrastructure problems and add the carbon filtration system, additional testing and helping identify and provide filters.

Hope that helps.

Thanks and best,
SW

Got a couple questions in here related to the Governor specifically, so please have a look and help me make sure it's right before we call this final, but here's the media Q&A.
Also, Terry please have a look at one of the later questions about the historic sequence. I think I captured the decision on leaving DWSD, but if you've got an official recollection, please provide. Thanks.

b

Flint Drinking Water
Media Q&A

Is the city going back to DWSD?
That's something we're leaving open. It's an option, but there are no moves at this time to do so. If it becomes something city leadership is interested in doing, the state is willing to act as a facilitator between Flint and DWSD to help come to conclusion that's best for the residents of Flint.

How did the state not see or fix this problem sooner?
Right now, we're focusing on addressing the problem at hand. Every household in the city of Flint is going to be eligible to receive a water filter. The Flint Water Treatment Plant is going to fully optimize its corrosion controls by Nov. 1. And we're going to accelerate water system improvements to address the replacement of lead service lines.

In the long term, we will work with the U.S. EPA to look at water testing protocol.

Is the water safe?
The water leaving the Flint Water Treatment Plant is safe to drink and meets federal guidelines for lead. However, we recognize some residents experience higher levels of lead in the water that comes out of their faucets because of lead service lines or lead plumbing in the home. We will expand water testing to better determine which areas have a problem; however, in the meantime, every home will receive a filter to ensure their drinking water is safe.

Does this mean Marc Edwards was right?
We aren't familiar with his testing protocol and have not seen his data. All we know is the state's data and the data Hurley Medical Center provided indicate a need to take precautionary action.

Why didn't you require corrosion controls from day one?
When the city switched water sources, they did begin using lime softening as a corrosion control. DWSD used phosphates, which is another form of corrosion control, but far from the only one. Flint was within federal protocols when it chose to use lime, and this is consistent with what every other community was required to do. The city will now use the past year's water test results to inform a final, or 'optimized' corrosion control system, and has pledged to do so by Nov. 1.

How do you feel about the state and federal testing protocols now that you know there was a problem?

DEQ is working in the community to get a better sense of the actual lead threat, and working with EPA to review our testing protocols. Beyond federal statute requirements, our goal is to protect public health. If we determine we need to make changes, we will.

Why are you requiring corrosion optimization now?
An optimized corrosion control plan will mean lead service lines and plumbing are coated with a layer of phosphates to minimize lead leaching into water. It won't eliminate the lead issue from the water, but it is expected to minimize it. The sooner the city can begin this treatment, the sooner this added level of protection will be in place.

What will you do if the schools you are testing come back with lead?
We will do whatever is necessary to protect the kids in those schools. The action steps announced today should make it clear the state puts the safety of kids and families first.

Is the Governor going to give the city the $30 million it asked for? Or the $13 million state Sen. Ananich wants to include in the budget?
This is a longer term conversation with the state Legislature. As we develop a clearer picture of Flint's lead exposure levels, it will help inform a conversation about short and long-term needs and priorities.

Why did the Governor and the state ignore city residents who have been saying there's a problem for six months?
The state has not ignored this situation. DEQ specialists have been working regularly with Flint officials, in Flint, for the past several years. We've been paying very close attention, but state regulators can't make decisions on allegations. We've been collecting and analyzing data and putting our top departmental minds on this issue. Some new information recently concerns the state enough to take action out of an abundance of caution while we investigate further.

Why did the Governor hide the fact that he was involved in distributing filters previously?
The Governor did not hide anything. He's long been a proponent of a "no blame, no credit" approach to leadership. The administration has been meeting regularly with church leaders from Flint, and he listened when many of them expressed that their memberships had serious concerns. His help to acquire the filters wasn't a media stunt, and he didn't feel compelled to claim credit for his role.

Will you meet with Marc Edwards?
We are not adverse to the idea. He has been invited to participate in the Mayor's Technical Advisory, and DEQ's staff are on that group, so we anticipate getting to dialogue with him there.

Do you trust the city's data?
The city certified its data, as all water system operators do when performing statutorily required lead and copper tests. We are reviewing their data.

Why did the Governor allow the city to switch away from DWSD initially?
The city felt compelled to make the switch. At the time, DWSD was forming the Great Lakes Water Authority, and offered Flint a contract when the city announced it would eventually leave to join KWA. The city

Has the city/Governor put residents at risk?
We don't think so. We recognize there is tremendous public concern in Flint regarding the water. The system is in compliance with federal lead and copper rules, based on testing. But we are aware that some in Flint are being exposed to higher levels of lead, and we are taking significant precautionary steps to protect the community as we look deeper into the situation.

What will the state do about my children? Lead poisoning causes irreversible damage.
Lead poisoning is serious. That is why the state has several programs that screen for lead in our communities and work to educate parents about sources of lead poisoning and ways to avoid it.

Is lead just a problem in Flint?
Lead is a long-standing problem throughout Michigan and the country. The leading source of lead poisoning is lead paint, but other pathways include soils contaminated by historic lead from car emissions and industrial processes, and sometimes from lead plumbing and service connections in old homes and neighborhoods. While all these sources are long outlawed, the lead persists in the environment and in homes.

Why isn't the Governor here today?
Governor regrets he cannot personally lead this announcement. He is out of state and the leadership of his cabinet on this issue, Nick Lyon and Dan Wyant, are presenting this plan today because the state did not want to wait to announce it is taking action. But the governor was integral in the development of the plan.

Does the Flint River have lead? Is it more corrosive than the water from DWSD?
The Flint River does not have lead. The water produced by the drinking water plant does not have lead in it. This issue is strictly about the lead in home plumbing, and that fact makes getting specific data about lead exposure a challenge.
On the issue of corrosivity: the state's drinking water program screens drinking water for 90 different contaminants, but corrosiveness it is not a drinking water standard. Operators of large systems are required to implement corrosion control measures, and Flint is doing that on a very abbreviated schedule.

If the lead is in individual homes' plumbing, how long will it take to fix this problem?
Experts estimate that the process from commencing corrosion control measures to seeing a protective coating develop throughout the system could take up to six months.

Will the move to KWA fix it, or will we still see lead?
It is entirely possible. Historic testing of Flint's system showed the presence of lead when the city was using DWSD water, and it is likely that some homes will still see some level of lead exposure after the system is optimized. The only way to eliminate lead completely is to remove lead plumbing.

Will testing start over when we move to KWA?
Yes, but the corrosion control measures will not be suspended when the city begins the process again next year. The new water source KWA will supply is the same one the Detroit system uses – Lake Huron.

Why aren't Kildee and Ananich here?
Don't know. They were briefed and invited. Today's announcement is a partnership, and we will look to our elected leadership to help protect the people of Flint.

How much are we paying all these new consultants – Dr. Wells and the EPA expert?
Dr. Wells is the state's Chief Medical Officer. Her new role in Flint is part of her duties to the state. The EPA expert similarly is participating as part of his job (SOMEBODY TELL ME IF THIS IS ACCURATE).

Did the DEQ provide any advice to the emergency manager about the switch from DWSD?
The state was opposed to Flint leaving DWSD – not because of concerns about water quality, but because at the time the city was working through its bankruptcy and the state felt the move would incur more expenses for both cities. Flint made the case it could save money in the period that KWA was constructing its pipe, and the state leaders – including the Emergency Financial Manager – eventually granted the city its request.

How long has lead been a problem in Flint? If the problem is in people's home, does that mean they have always been poisoned by this?
Lead is a historic problem, particularly in urban areas, around the nation. While the leading source of lead ingestion has always been paint, lead plumbing has always been some lesser part of the picture. This is why the U.S. EPA created the lead rule – to monitor drinking water systems and raise awareness about lead in home plumbing, and require systems to take steps to minimize lead exposure.

Why aren't you declaring a state of emergency?
The action plan announced today takes significant steps to protect the community while state experts take a closer look at the situation. Available information is concerning enough to spark precautionary protective actions, but there is insufficient hard data yet available to declare an emergency.

Why aren't you providing bottled water?
Distributing lead filters throughout the city will address lead exposure in drinking water while the state continues its investigation.

How long does it take for the system to be fully optimized once the corrosion control treatment begins?
Approximately six months. The state will direct the city to test the system again early next year to check its progress. Any resident approached to participate in the testing is strongly encouraged to participate. Not only does the opportunity offer a free home lead test, but the results help city and state regulators get a more accurate picture of what is happening. Resident participation is crucial to the success of this program, and participation in Flint has historically been a challenge.

Would suggest the following edits...

Did the DEQ provide any advice to the emergency manager about the switch from DWSD?
The state was opposed to Flint leaving DWSD – not because of concerns about water quality, but because at the time the city of Detroit was working through its bankruptcy and the state felt the move would incur more expenses for both Detroit and Flint. The the-emergency manager, mayor and city council approved the move to KWA and the state approved the transition. Following the city's decision to move to KWA, DWSD canceled flints contract effective April of 2014. The city faced limited options for its water source following the cancellation of its DWSD contract.

Jennifer

Blood Lead Levels in Flint Talking Points
October 1, 2015

- Initial analysis of MDHHS data found that blood lead levels (BLLs) of children in Flint have followed an expected seasonal trend; due to small numbers further analysis was initiated.
- While this analysis of blood lead levels in Flint as a whole remains true, after a comprehensive and detailed review down to the zip code level, we have found that the state analysis is consistent with that presented by Hurley.
- Director Lyon is working closely with DEQ and the administration to take active steps to reduce all potential lead exposures in Flint, and across the state.
- Our Chief Medical Executive has been in communication with the lead investigator at Hurley Children's Hospital, and we continue to work with Hurley, the city of Flint, local and state leaders to verify and analyze data trends.
- Zip code-level data does show that there has been an increase in elevated childhood blood lead levels in specific communities.
    - This does not conclusively mean that the water source change is the sole cause of the increase, but data does show an association.
    - There is an increased proportion of children with elevated Blood Levels (ELBs) in several zip codes, particularly 03 and 04. These appear to have increased over the last 1.5 years.
    - Lead exposure can occur from a number of different sources (such as paint, gasoline, solder, and consumer products) and through different pathways (such as air, food, water, dust, and soil).
    - Although there are several exposure sources, lead-based paint is still the most widespread and dangerous high-dose source of lead exposure for young children in the US and Michigan.
- We reviewed MDHHS statewide data using the same methodology used by Hurley, looking at our numbers by zip code and age ranges, and filtering out non-Flint children.
- Routine surveillance of blood lead levels does not analyze data down to the zip code level. Detailed analysis like this occurs when there is reason to focus in on precise locations or populations.
- MDHHS will be working closely with the Michigan Department of Environmental Quality, Hurley Children's Hospital, the Genesee County Health Department, and community organizations to initiate further action steps.
- We understand that cost may be a barrier to following the recommendations of the local health department. We are actively working with public and private partners to make resources available to those who may need assistance.
- MDHHS is recommending that residents follow the Public Health Advisory issued by the Genesee County Health Department, as well as take further steps to reduce exposures to all forms of lead in and around their homes.

MDHHS Stats and Facts

- 'High Risk' Zip codes (48503 and 48504)
    - Blood lead level rates among children under six years of age in the high risk zip codes (48503, 48504) were 2.7 times higher than the rest of Genesee County before the switch to Flint River Water.
    - After the switch to Flint River Water, rates in the high risk Zip codes were 3.2 times that of the rest of Genesee County.
- Other Zip codes in Flint
    - Rates of elevated blood lead levels among children under six years of age in other parts of the city of Flint were 2 times that of the rest of Genesee County before the switch to Flint River Water.
    - The magnitude of the elevated rate remained roughly the same during the period after the water source switch.
- Lead abatement through MDHHS was federally funded up until FY14 when Michigan began providing additional funds to abate homes.
- In FY14, $1.25M General Fund was added. In FY15, General Fund was bumped up to $1.75M and FY16, General Fund remains at $1.75M.

Water Filters

- Our first action item is to work closely with our public and private partners to provide water filters to Flint residents and MDHHS clients.
- To meet this priority, the governor has identified one million dollars in state funding to purchase water filters for Flint residents.
- Given the questions and concerns regarding the change in water source in Flint, MDHHS has authorized the use of emergency services funding to provide water filters for MDHHS clients receiving assistance in the city of Flint.
- We would like to pursue a plan for clients who are active Family Independence Program (FIP), Food Assistance Program (FAP), Child Development and Care (CDC) or Social Security Insurance (SSI) to come to the local MDHHS offices in Flint to obtain a waiver that they could then take to an identified Meijer or Walmart store to obtain water filters that are National Sanitation Foundation (NSF) certified to remove lead and ANSI Standard 53.
- We are in discussions with local retailers and will share additional information about where residents can go to purchase filters as soon as those details have been finalized.
- MDHHS currently serves approximately 25,000 households in Flint but we would anticipate processing approximately 5,000 requests for vouchers a week.

Reducing and Removing Lead Exposure

- In housing built before 1978, it can be assumed that the paint has lead unless tests show otherwise.

- Make sure your child does not have access to peeling paint or chewable surfaces painted with lead-based paint.
- Children and pregnant women should not be present in housing built before 1978 that is undergoing renovation. They should not participate in activities that disturb old paint or in cleaning up paint debris after work is completed.
- Create barriers between living/play areas and lead sources. Until environmental clean-up is completed, you should clean and isolate all sources of lead.
    - Close and lock doors to keep children away from chipping or peeling paint on walls. You can also apply temporary barriers such as contact paper or duct tape, to cover holes in walls or to block children's access to other sources of lead.
- Regularly wash children's hands and toys. Hands and toys can become contaminated from household dust or exterior soil. Both are known lead sources.
- Regularly wet-mop floors and wet-wipe window components. Because household dust is a major source of lead, you should wet-mop floors and wet-wipe horizontal surfaces every 2-3 weeks.
    - Windowsills and wells can contain high levels of leaded dust. They should be kept clean. If feasible, windows should be shut to prevent abrasion of painted surfaces or opened from the top sash.
- Take off shoes when entering the house to prevent bringing lead-contaminated soil in from outside.
- Prevent children from playing in bare soil; if possible, provide them with sandboxes. Plant grass on areas of bare soil or cover the soil with grass seed, mulch, or wood chips, if possible.
    - Until the bare soil is covered, move play areas away from bare soil and away from the sides of the house. If you have a sandbox, cover the box when not in use to prevent cats from using it as a litter box. That will help protect children from exposure to animal waste.
- Avoid using makeup, containers, cookware, or tableware to store or cook foods or liquids that are not shown to be lead free.
- Remove recalled toys and toy jewelry immediately from children.
- Use only cold water from the tap for drinking, cooking, and making baby formula. Hot water is more likely to contain higher levels of lead. Most of the lead in household water usually comes from the plumbing in your house, not from the local water supply.
- Shower and change clothes after finishing a task that involves working with lead-based products such as stained glass, making bullets, or using a firing range.

WIC Children

- There are 855 infants participating in WIC in Flint.
- We are working with partners at the United Way to ensure that WIC families have access to water filters and bottled water.

- In homes with infants on WIC, if the household has documentation from an official source of unsanitary water supply issues, that family may be eligible to receive ready-to-feed formula. Families should contact WIC to see if they are eligible.
- Each household would have to be looked at on an individual basis.
- WIC cannot cover bottled water.

Background

- The results of the Hurley Children's Hospital were reviewed by MDHHS after the study was released last week.
- The analysis that Hurley conducted was different from the initial MDHHS data regarding blood lead levels in Flint.
- MDHHS initial data looked at the entire blood lead levels for the Flint area for the past five years and showed the annual seasonal trends in the area.
- Seasonal exposure is higher in the summer for a variety of reasons including children playing outside in the soil, and when windows are open and lead paint is more likely to be in the air. Further, seasonal variations in water can occur due to changes in temperature, pH , and other factors

Flint Drinking Water Action Plan
Talking Points

Overall Messaging

- Repeated testing shows the water leaving Flint's drinking water system is safe to drink and meets all federal guidelines, including lead.
- After the switching to the Flint River, the compliance testing protocol yielded results of 6 ppb in December 2014 and 11 ppb in June 2015, which forces the city to complete its corrosion control optimization.
- However, we recognize some residents experience higher levels of lead in the water that comes out of their faucets because of lead plumbing in the home, and that's a concern.
- Out of an abundance of caution, we want to address the needs of all Flint families, and so we have developed an action plan that includes both short- and long-term solutions.
- The state plan focuses on increasing water testing, offering additional precautions for families, and providing long-term solutions to address the city's water infrastructure.

Messaging regarding the action plan

The city and the state are working together to gather more data to ensure the water that leaves the treatment plant as well as the water that arrives in Flint homes is safe for all residents.

- **Immediately test Flint public schools to ensure that drinking water is safe. Testing will also be available at no cost to any other school in Flint.**
    - Although Flint's drinking water meets all federal requirements, the state wants to take extra steps to ensure that drinking water is safe for the city's children.
    - The state will fund this testing (about $30,000) at no cost to the city or the local schools, and make the results publicly available.

- **Expand health exposure testing of individual residences.**
    - To double-check its data as well as provide residents with an additional layer of assurance, the DEQ will conduct more tests at Flint properties.
    - The Technical Advisory Committee will determine the scope of this expanded testing.

- **Offer water testing at no cost to Flint residents to assure water is safe.**
    - Although all testing indicates water in the city of Flint meets all federal standards, we understand some residents are concerned.
    - To ensure water in individual homes is safe, free water testing is available to all Flint residents.
    - We encourage anyone with a concern to get their water tested.
    - Contact the city water department to have your water tested.

- **Accelerate optimizing corrosion controls in the Flint drinking water system.**

- A fully optimized corrosion control system means the insides of pipes are coated to minimize the amount of lead that enters the drinking water after it leaves the treatment plant.
- This is a helpful step that can minimize lead exposure system-wide, and we're pleased the city is moving to take this step.
- If asked: Phosphate was not initially required because the city was using a lime softener, one of many corrosion control options, while they performed federally required rounds of water tests to determine their optimization options and needs.

- **Expand the "Safe Drinking Water Technical Advisory Committee" to ensure the best technology, practices and science are being utilized, and add an expert from the EPA's Office of Research and Development to the group.**
  - The Safe Drinking Water Technical Advisory Committee will meet Oct. 7 to discuss fully optimizing the corrosion control system, expanding testing of at-risk properties, and other topics.
  - Tom Burke, the Deputy Assistant Administrator of EPA's Office of Research and Development as well as the EPA's Science Advisor, will participate on the committee. Prior to joining EPA, he held prominent positions at the Johns Hopkins Bloomberg School of Public Health and founded the Johns Hopkins Risk Sciences and Public Policy Institute. He brings substantial expertise, and we're pleased he is able join the committee.

- **Accelerate water system improvements to address replacement of lead service lines.**
  - Regardless of the drinking water source – whether it be DWSD, the Flint River or Lake Huron – the only permanent fix for lead is to replace the private lead service lines in the city. These are the lines on private property that lead from the curb to individual homes.
  - This is a problem in communities statewide, and one we want to address with a long-term solution.
  - The state and EPA are working with Congressman Kildee to find a way for the city to access Drinking Water Revolving Loan funds for this work.

- **Expedite completion of Karegnondi Water Authority.**
  - The move to the Flint River was always a temporary measure until the connection to the KWA and to Lake Huron was completed.
  - This is the ultimate goal of the venture, and the state and locals will work together to speed up completion of the connection.

- **Name Dr. Eden Wells as Flint Drinking Water Public Health Advisor.**
  - Dr. Wells is the Director for the Preventive Medicine Residency at the University of Michigan School of Public Health in Ann Arbor as well as the Chief Medical Executive for MDHHS.

- She brings years of experience in epidemiology and preventative medicine to the issue, and we're thrilled to have her expertise.
- Dr. Wells will coordinate with Hurley Medical Center to share data on blood lead levels in children, as well as address other emerging issues.

- **Provide water filters to residents of Flint.**
  - As an additional precaution, water filters will be available to Flint water customers.
  - This provides another safeguard to ensure everyone in the city of Flint has access to clean drinking water they feel confident drinking, cooking, or using for formula.

- **Expand a comprehensive lead education initiative.**
  - Lead plumbing is common in homes built prior to 1986, and anyone in the state with lead pipes in their home can take some extra precautions to minimize lead in their drinking water.
  - It takes time for lead to accumulate in drinking water from plumbing, and so flushing your pipes prior to using them can minimize your exposure.
    - To flush your pipes, run the water until it is as cold as it will go. This can take as little as 5 to 30 seconds if you have recently flushed the toilet or otherwise used water in your home, or as long as 2 to 5 minutes if you have not used any water in hours.
    - In the city of Flint, running the water for 5 minutes only costs about 3-16 cents, depending on your faucet.
  - Additionally, more lead gets into hot water than cold water. Use only cold water for drinking, cooking and making baby formula.

Subject: Nick's Talking Points

Nancy -- Please have Nick use these!

With the evolving filter situation, the talking points have been updated. Please note that in Nick's talking points, State Disability Assistance (SDA) has been added to the list of programs that will be eligible for filters.

The general talking points have been updated as well.

Thank you,
Jennifer

Director Nick Lyon Flint Water Press Conference Talking Points
October 2, 2015

- In addition to the points raised by DEQ in protecting the health of Flint residents, the Michigan Department of Health and Human services have also begun taking steps to reduce and prevent lead exposure for Flint families.
- Our first action item is to work closely with our public and private partners to provide water filters to Flint residents and our MDHHS clients in Flint.
- To meet this priority, the governor has identified one million dollars in state funding to purchase water filters for Flint residents.
- Additionally, through department emergency funds, we are working to provide National Sanitation Foundation (NSF) certified water filters to residents who are active Family Independence Program (FIP), Food Assistance Program (FAP), Child Development and Care (CDC), State Disability Assistance (SDA) or Social Security Insurance (SSI) recipients.
- We have already begun working with the local United Way to provide filters to residents receiving WIC benefits.
- We are in discussions with local retailers and will share additional information about where residents can go to purchase filters as soon as those details have been finalized.
- Our next step in the state action plan is to educate families about the steps they can take to reduce all lead exposures in their home.
- Lead exposure can occur from a number of different sources such as paint, gasoline, solder, and consumer products and through different pathways such as air, food, water, dust, and soil.
- Although there are several exposure sources, lead-based paint is still the most widespread and dangerous high-dose source of lead exposure for young children in the US and Michigan.
- We will be working to educate all Flint families on steps that they can take to reduce any and all lead exposures in and around their homes.
- And lastly, Gov. Rick Snyder has named Dr. Eden Wells as the Flint Drinking Water Public Health Advisor.
- In addition to the action plan, zip code-level data does show that there has been an increase in elevated childhood blood lead levels in specific communities.
- Initial analysis of MDHHS data found that blood lead levels of children in Flint have followed an expected seasonal trend.
- While this analysis for Flint as a whole remains true, after a comprehensive and detailed review down to the zip code level, MDHHS data state analysis is consistent with that presented by Hurley Children's Hospital.
- We cannot conclusively say that the water source change is the sole cause of the increase, but this analysis supports our efforts as we take active steps to reduce all potential lead exposures in Flint.

- I'd like to now ask Dr. Eden Wells, MDHHS Chief Medical Executive and the Flint Drinking Water Public Health Advisor to provide an overview of the data analysis.

Blood Lead Levels in Flint Talking Points
October 1, 2015

- Initial analysis of MDHHS data found that blood lead levels (BLLs) of children in Flint have followed an expected seasonal trend; due to small numbers further analysis was initiated.
- While this analysis of blood lead levels in Flint as a whole remains true, after a comprehensive and detailed review down to the zip code level, we have found that the state analysis is consistent with that presented by Hurley.
- Director Lyon is working closely with DEQ and the administration to take active steps to reduce all potential lead exposures in Flint, and across the state.
- Our Chief Medical Executive has been in communication with the lead investigator at Hurley Children's Hospital, and we continue to work with Hurley, the city of Flint, local and state leaders to verify and analyze data trends.
- Zip code-level data does show that there has been an increase in elevated childhood blood lead levels in specific communities.
    - This does not conclusively mean that the water source change is the sole cause of the increase, but data does show an association.
    - There is an increased proportion of children with elevated Blood Levels (ELBs) in several zip codes, particularly 03 and 04. These appear to have increased over the last 1.5 years.
    - Lead exposure can occur from a number of different sources (such as paint, gasoline, solder, and consumer products) and through different pathways (such as air, food, water, dust, and soil).
    - Although there are several exposure sources, lead-based paint is still the most widespread and dangerous high-dose source of lead exposure for young children in the US and Michigan.
- We reviewed MDHHS statewide data using the same methodology used by Hurley, looking at our numbers by zip code and age ranges, and filtering out non-Flint children.
- Routine surveillance of blood lead levels does not analyze data down to the zip code level. Detailed analysis like this occurs when there is reason to focus in on precise locations or populations.
- MDHHS will be working closely with the Michigan Department of Environmental Quality, Hurley Children's Hospital, the Genesee County Health Department, and community organizations to initiate further action steps.
- We understand that cost may be a barrier to following the recommendations of the local health department. We are actively working with public and private partners to make resources available to those who may need assistance.
- MDHHS is recommending that residents follow the Public Health Advisory issued by the Genesee County Health Department, as well as take further steps to reduce exposures to all forms of lead in and around their homes.

MDHHS Stats and Facts

- 'High Risk' Zip codes (48503 and 48504)
    - Blood lead level rates among children under six years of age in the high risk zip codes (48503, 48504) were 2.7 times higher than the rest of Genesee County before the switch to Flint River Water.
    - After the switch to Flint River Water, rates in the high risk Zip codes were 3.2 times that of the rest of Genesee County.
- Other Zip codes in Flint
    - Rates of elevated blood lead levels among children under six years of age in other parts of the city of Flint were 2 times that of the rest of Genesee County before the switch to Flint River Water.
    - The magnitude of the elevated rate remained roughly the same during the period after the water source switch.
- Lead abatement through MDHHS was federally funded up until FY14 when Michigan began providing additional funds to abate homes.
- In FY14, $1.25M General Fund was added. In FY15, General Fund was bumped up to $1.75M and FY16, General Fund remains at $1.75M.

Water Filters

- Our first action item is to work closely with our public and private partners to provide water filters to Flint residents and MDHHS clients.
- To meet this priority, the governor has identified one million dollars in state funding to purchase water filters for Flint residents.
- Given the questions and concerns regarding the change in water source in Flint, MDHHS has authorized the use of emergency services funding to provide water filters for MDHHS clients receiving assistance in the city of Flint.
- We are pursuing a plan for clients who are active Family Independence Program (FIP), Food Assistance Program (FAP), Child Development and Care (CDC), State Disability Assistance (SDA), State Disability Assistance (SDA), or Social Security Insurance (SSI) to that they can obtain filters that are National Sanitation Foundation (NSF) certified to remove lead and ANSI Standard 53.
- We are in discussions with local retailers and will share additional information about where residents can go to purchase filters as soon as those details have been finalized.

- MDHHS currently serves approximately 25,000 households in Flint.

Reducing and Removing Lead Exposure

- In housing built before 1978, it can be assumed that the paint has lead unless tests show otherwise.
- Make sure your child does not have access to peeling paint or chewable surfaces painted with lead-based paint.

- Children and pregnant women should not be present in housing built before 1978 that is undergoing renovation. They should not participate in activities that disturb old paint or in cleaning up paint debris after work is completed.
- Create barriers between living/play areas and lead sources. Until environmental clean-up is completed, you should clean and isolate all sources of lead.
    - Close and lock doors to keep children away from chipping or peeling paint on walls. You can also apply temporary barriers such as contact paper or duct tape, to cover holes in walls or to block children's access to other sources of lead.
- Regularly wash children's hands and toys. Hands and toys can become contaminated from household dust or exterior soil. Both are known lead sources.
- Regularly wet-mop floors and wet-wipe window components. Because household dust is a major source of lead, you should wet-mop floors and wet-wipe horizontal surfaces every 2-3 weeks.
    - Windowsills and wells can contain high levels of leaded dust. They should be kept clean. If feasible, windows should be shut to prevent abrasion of painted surfaces or opened from the top sash.
- Take off shoes when entering the house to prevent bringing lead-contaminated soil in from outside.
- Prevent children from playing in bare soil; if possible, provide them with sandboxes. Plant grass on areas of bare soil or cover the soil with grass seed, mulch, or wood chips, if possible.
    - Until the bare soil is covered, move play areas away from bare soil and away from the sides of the house. If you have a sandbox, cover the box when not in use to prevent cats from using it as a litter box. That will help protect children from exposure to animal waste.
- Avoid using makeup, containers, cookware, or tableware to store or cook foods or liquids that are not shown to be lead free.
- Remove recalled toys and toy jewelry immediately from children.
- Use only cold water from the tap for drinking, cooking, and making baby formula. Hot water is more likely to contain higher levels of lead. Most of the lead in household water usually comes from the plumbing in your house, not from the local water supply.
- Shower and change clothes after finishing a task that involves working with lead-based products such as stained glass, making bullets, or using a firing range.

WIC Children

- There are 855 infants participating in WIC in Flint.
- We are working with partners at the United Way to ensure that WIC families have access to water filters and bottled water.
- In homes with infants on WIC, if the household has documentation from an official source of unsanitary water supply issues, that family may be eligible to receive ready-to-feed formula. Families should contact WIC to see if they are eligible.

- Each household would have to be looked at on an individual basis.
- WIC cannot cover bottled water.

Background

- The results of the Hurley Children's Hospital were reviewed by MDHHS after the study was released last week.
- The analysis that Hurley conducted was different from the initial MDHHS data regarding blood lead levels in Flint.
- MDHHS initial data looked at the entire blood lead levels for the Flint area for the past five years and showed the annual seasonal trends in the area.
- Seasonal exposure is higher in the summer for a variety of reasons including children playing outside in the soil, and when windows are open and lead paint is more likely to be in the air. Further, seasonal variations in water can occur due to changes in temperature, pH , and other factors

Subject: Follow-up questions

Importance: High

- Reviewing my notes, I'm not sure I got a definitive answer from Wyant about corrosion control at the Flint water treatment plant.
  Was corrosion control in use? I'd like a simple yes or no, here – if no, obviously, why not – if yes, what was it, and why was – if any – what sounds like a lesser degree of corrosion control being used? I would like the names of the specific technologies/chemicals that were in use in the past, if in fact corrosion control was being used at the Flint plant, and the specific technologies that will be used going forward.
- Was the MDEQ unaware that there were aging lead service lines in Flint, and that those would increase the lead risk? Were the Flint water treatment folks? Why was this not taken into account in developing the water treatment count?
- Wyant said that "two consecutive back to back tests" showed there was a problem; when were those tests performed and when were the results available?

Obviously I would like to use this information in a piece we'll have ready to go at 1:30p so ASAP would be great.

- Reviewing my notes, I'm not sure I got a definitive answer from Wyant about corrosion control at the Flint water treatment plant.
  Was corrosion control in use? I'd like a simple yes or no, here – if no, obviously, why not – if yes, what was it, and why was – if any – what sounds like a lesser degree of corrosion control being used? I would like the names of the specific technologies/chemicals that were in use in the past, if in fact corrosion control was being used at the Flint plant, and the specific technologies that will be used going forward.

The plant was using a lime as a means of minimizing corrosion, which is an recognized corrosion control treatment by EPA. The two consequent monitoring results from December 2014 and June 2015 while meeting the action level were deemed optimal and were in fact increasing. As such the State sent s letter in August to require further optimization. We understand the City is going to use orthophosphate to fully optimize its system and that will happen this month.

- Was the MDEQ unaware that there were aging lead service lines in Flint, and that those would increase the lead risk? Were the Flint water treatment folks? Why was this not taken into account in developing the water treatment count?

The DEQ and City were aware that Flint, and many other older communities, has lead service lines. It was the City's decision to use lime as its first treatment option and to monitor to see its effectiveness. In some communities this treatment has been effective corrosion control.

- Wyant said that "two consecutive back to back tests" showed there was a problem; when were those tests performed and when were the results available?

Those test were performed in the six months leading up to Dec. 2014 and again June 2015. The results were made available to the residents that were tested, the City, and all testing results will soon be made available on the Flint water website the state has created. They overall results have always been available in the City's compliance documents.

Cc: Wurfel, Sara (GOV); Murray, David (GOV)
Subject: RE: $1M

Hi Dave --

I know we just chatted, but to reiterate, the $1 million in funding was identified to serve Flint residents in addition to those we are able to provide filters with through MDHHS emergency funds. The MDHHS emergency funds must be used to support people who are active Family Independence Program (FIP), Food Assistance Program (FAP), Child Development and Care (CDC), State Disability Assistance (SDA) or Social Security Insurance (SSI) recipients.

In terms of distributing the $1 million in filters more broadly, that policy is actively being worked out --those details and logistics will be made publicly available as soon as they're finalized.

Thank you, and be in touch again soon.

Subject: RE: governors team

Sorry, Ron, I can't see any of the text below after "WJRT is reporting" … other than "water crisis." What's the Q?

Though you know the state team will start today its distribution of water filters at both DHHS offices for state assistance clients and through GCARD offices for any other Flint resident, yes?

Very helpful. Thx much.

What is anticipated cost of filter cartridge replacement?

Also, we're needing to send the Governor daily updates for his briefing on this issue. Would be great to have recap of today's first distribution by 4 p.m. -- how went, how many given out/clients served, overall reax/reception, etc. And anything else of note that's important or key.

Old Water Pipes Not Just A Flint Issue

Flint's lead-tainted water has refocused attention on something usually buried in the minds of the public: The water supply, and how it's piped into homes.

"Potholes you can see when you hit them. You see a rusted-out bridge," said Pat **LINDEMANN**, drain commissioner of Ingham County, who referred to water pipes as the orphan child of infrastructure.

While much has been made of the state's roads and efforts to pump more funds into them, some experts have portrayed the aging water infrastructure across the state as underfunded and decades behind in repair and replacement.

Not only that, but some officials concede there are instances where local governments have no idea what condition their systems are in or even where they're located underground.

"We have a lot of old infrastructure under there and half the time -- most of the time -- we're clueless as to exactly where it is," Lindemann said, after describing an instance when the county discovered some wooden water pipes running beneath a section of Old Town in Lansing.

The American Society of Civil Engineers bestowed Michigan's roads with a "D" grade in areview of the state's infrastructure. Also receiving substandard grades were Michigan's drinking water (D) and wastewater (C).

This is despite the state being surrounded by some of the cleanest sources of water in the country, said James **CLIFT**, policy director of the Michigan Environmental Council (MEC).

Yet the issue is often the old infrastructure the water runs through.

"Literally, around the state, we have water supply systems that can range anywhere from 50 to 100 years old," said Mike **NYSTROM**, executive vice president of the Michigan Infrastructure

and Transportation Association (MITA). "We can literally show you pictures of some of them, people would be horrified."

People have also been horrified about what they've seen coming out of their taps in Flint, attributed in part to the lead water pipes that run into homes from the main system (See "State Plan For Flint Water Includes More Testing, $1 Million For Filters," 10/2/15).

Cities with older homes are likely to have these lead pipes still, said Gary **MEKJIAN**, director of public services for Farmington Hills, and also leader of the Michigan Municipal League's internal transportation and infrastructure committee.

Mekjian said some communities have removed many lead pipes from the public right-of-way, but like what happened in Flint, the lead pipes beneath some private properties haven't been addressed.

In many cases, the portion of the pipe underneath a person's property that runs into the house belongs to that person, but there are some who believe that burden should fall to the public utility to dig up and replace.

"I think it's part of the public utility," Clift said, adding that when it comes to electric utilities, no one is arguing the line from the telephone pole to the house is the landowner's responsibility to maintain.

The state plan issued last week in response to the Flint water fallout mentioned accelerating water system improvements to replace lead service lines.

One way the state may go about that is looking into rule or law changes for a fund that has typically been allowed for use only on municipal projects on the main water line, according to the Michigan Department of Environmental Quality (DEQ).

Another issue is that governments are behind on evaluating the condition of their water pipes and infrastructure.

Clift referenced the "rudimentary" process by which Flint tracks homes with lead pipes, according to media reports, the city keeps that information on a series of 45,000 index cards.

"There's a lot of information about this stuff we don't even know," Lindemann said. "When they put it in the ground, a lot of this stuff wasn't even mapped. We don't even know exactly where it is."

As Mekjian said, a government can't manage something until it understands what it has, so that's step one.

"Once folks across the state are able to see how bad the systems are across the state, we look to have some statewide funding mechanism put in place," Nystrom said.

The state has tried to jump-start this review process for locals through its Stormwater, Asset Management and Wastewater (SAW) grant program, which originated from legislation signed into law in 2013.

These grants help locals develop asset management plans for wastewater and stormwater

systems, among other uses, according to the DEQ.

But once that's established, next comes funding, which historically has struggled to keep up with the actual needs of these systems.

Several experts described a pattern that has followed the financial support of water infrastructure: Even from the time of the Civil War through the 20th century, the federal government paid for some big projects.

But when the locals gained control of these systems, they didn't implement the kind of rates that could support the upkeep long-term.

"The ability of a water system to levy the appropriate amount of fees so that it can . . . implement the appropriate capital improvements . . . is absolutely critical," Mekjian said. "You can't have politicians trying to keep water and sewer rates artificially low to meet their agenda. You just can't do it."

Here's a first cut at some talking points. Give me your thoughts and edits. G, I know you guys are doing the detailed TPs on schools stuff, I just put that section in there mostly as a placeholder.
b

Talking points on water source switch for Flint

On Oct. 7, The City of Flint's water quality technical advisory convened to review the City's plan for optimizing corrosion control in the Flint water system. At that meeting, the group of technical experts unanimously recommended that the City should return to Detroit's water supply until the KWA is completed.

The City of Flint estimates that, while it will cost them an additional $1.3 million per-month to use DWSD, the water supply is more stable and presents less challenge for city water managers to deliver quality drinking water.

The Mayor met with the Governor and Detroit officials to discuss a proposed $9.8 million agreement that will help the City return to DWSD and the state to conduct in-depth public health testing to protect Flint families and kids.

General tenants of the agreement (sources of money).

- $6 Million so Flint can reconnect to DWSD through June 2016 (total cost is $12 million, Flint will match the state's commitment).
- $1 Million for Filters as a precautionary protection for Flint residents.
- $1.5 Million for 10 additional staff to do community Lead Exposure Testing
- $1.3 Million for evaluating sample results at the state lab (each sample costs $26 to process)
- **HUMAN RESOURCES:** The state is requesting eight staff for DHHS and two staff for DEQ as part of an investigatory team to examine lead exposure in Flint schools and homes.

Announcement of testing results from Flint Schools

On Oct. 2, 13 Flint public schools were sampled for lead in drinking water. The results announced today indicate the need for a closer look at the schools.

- 37 total samples
- 4 samples exceeded the federal action plan of 15 parts per billion
- 1 result was a significant outlier necessitating further action

DEQ, DHHS and LARA will be taking a closer look at schools, and all Flint schools will now be tested.

Schools examined by the state so far did not have lead service lines. The building needs demand larger diameter service and the material is cast iron (?). It is likely interior plumbing in the buildings is the cause of any lead exposure, but the state is calling for a closer look at schools.

- Schools in Michigan that are part of a municipal supply historically are not tested for lead in drinking water.
- All schools in Flint will be tested.

- Until the testing and inspections are complete, schools are advised to continue using bottled water and filtration as a precaution to protect kids.
- The state will commit to helping schools identify on-premise sources of lead, but it is the schools' responsibility to take necessary actions to maintain their infrastructure.
- The state's commitment to Flint schools is limited to Flint schools. Other Michigan schools are not eligible for free testing and plumbing inspection.

Continued testing of Flint Residences

Since the state announced Oct. 2 that concerned Flint residents should take advantage of free water testing, the state lab has received a growing collection of samples.

The first 100 samples have been processed.

The 90^{th} percentile of the first 100 samples was 10 parts per billion.

All residents who take part in free home testing will be sent their results.

Subject: RE: two questions from Gov

Just a little clarification (I hope) -

Schools on municipally supplied water are not generally tested under the lead and copper rule unless there are not enough high priority sampling locations available to the water supply for sampling. High priority sampling sites are residential with lead service lines.

Schools that are on their own source of water (wells) are public water supplies (nontransient Noncommunity water supplies) and are sampled under the Safe Drinking Water Act lead and copper rule.

There are other regulatory agencies with oversight of schools including MDARD for their cafeteria operations and DLARA for plumbing.

Subject: RE: two questions from Gov

Liane, please correct me if I've got this wrong …

In short, I believe the answer I'm going to be able to confirm yet today is that the schools have never been tested.

There is no requirement in statute for the testing of schools for lead or copper if they're using the municipal service as their supply (statute presumes they are covered same as homes by the surveillance monitoring done on households).

If the school is on its own well, it undergoes testing as a sole source.

Flint Drinking Water

Media Q&A

Oct. 8, 2015

Switch to Great Lakes Water Authority

What finally pushed the state to this decision?

Will this solve Flint's water crisis?

If you're saying residents will still have lead because of their plumbing, does that mean every other city in this state has a lead problem?

Where's the state getting the money to fund this?

Where's the city getting the money to fund this?

How long will the switch take?

How long will it take before Detroit's corrosion controls provide protection for Flint?

Why do residents still need to use filters and bottled water?

Do the filters actually work? We've been hearing they don't protect for lead.

The filters are only good for 100 gallons. What happens when they are used up?

What about restaurants?

What's going to be done about lead service lines?

Do you wish you'd made this switch sooner?

Schools testing

What do these results say?

Any theories about what's going on?

Do the schools have lead service lines? If not, why are they getting such high results?

How long do the schools have to stay on bottled water? Just until the switch to Detroit, or longer term?

Why did you only test 13 schools?

What happens to other schools?

What about the schools that can't afford to update their entire plumbing systems?

How confident are you in your testing? You've got results all over the map.

What do you mean by "health exposure testing"? What are you doing next?

The 90th percentile of your results is still below 15 ppb. Does that make you more or less confident in your testing and in your protocols?

Any idea how long kids have been exposed to lead? Was it before the move to the Flint River?

How does the state bring this new information into the broader picture of kids' lead exposure across the state?

EM SUBMISSION NO.: 2013EM041

PRESENTED: 3-28-13

ADOPTED: 3-29-13

BY THE EMERGENCY MANAGER:

RESOLUTION TO PURCHASE CAPACITY FROM KAREGNONDI WATER AUTHORITY

The Karegnondi Water Authority (KWA) is a governmental consortium of cities and counties in southeastern Michigan that was created to build a water pipeline that will provide water from Lake Huron to interested communities in Sanilac, Lapeer, and Genesee counties. The incorporating bodies that created the KWA are Sanilac County, Lapeer County, Genesee County, the City of Flint, and the City of Lapeer.

The City of Flint is currently in a year to year contract with the City of Detroit for the purchase of water. A study was conducted that projected that staying with Detroit will cost the region $2.1 billion over the next 25 years. In contrast, if the region builds its own pipeline, the projected costs are $1.9 billion over the same period. After the initial 25 year period, the projected costs would be less then 25% of the projected water costs from Detroit.

In order to build the pipeline, the KWA needs commitment from its members regarding the capacity that each member will purchase in the pipeline. The KWA is allowed to withdraw 85 million gallons of water per day. Capacity is available to members in increments of 1 million gallons per day known as units. For each unit of capacity that a member purchases, the buyer shall pay to the KWA a one time fee of $32,300.00. Additionally, the buyer shall pay to the KWA not less then $32,300.00 per unit per year until such time as water is made available to the buyer. After water is made available, the buyer shall pay to the KWA an estimated amount not to exceed $355.300.00 per unit per year until such time that the bonds are paid in full. If it is determined that the costs per unit will exceed $355,300.00 the buyer has a right to cancel the contract.

The purchase of capacity along with the payment of other costs necessary to operate the pipeline gives the member a right to water for sale to its customers. The buyer has a right to resell capacity and water rights. Each party entering into a capacity contract shall also be entitled to appoint additional board members equal to the party's percentage share of the total capacity under contract.

It is in the long term best interests of the City of Flint to enter into a contract with the KWA to purchase up to eighteen (18) units of capacity.

IT IS RESOLVED that City officials are authorized to enter into a contract with KWA to purchase up to eighteen (18) units of capacity.

IT IS FURTHER RESOLVED that the City Administrator is authorized to provide KWA information needed to administer the contract and, with approval of the Chief Legal Officer, to make minor (non-material) modifications to the contract.

APPROVED AS TO FORM:

Peter M. Bade, City Attorney

APPROVED AS TO FINANCE:

Flint

Flint City Council approves resolution to buy water from Karegnondi, state approval still needed

[http://connect.mlive.com/staff/dadams1/index.html] By Dominic Adams | dadams5@mlive.com [http://connect.mlive.com/staff/dadams1/posts.html]
Follow on Twitter [http://www.twitter.com/dominicadams]
on March 25, 2013 at 10:45 PM, updated March 26, 2013 at 1:28 AM

FLINT, MI – Flint is one step closer to getting its water from Lake Huron as part of the Karegnondi Water Authority.

The vote, **approved 7-1 at the Flint City Council meeting Monday, March 25 [http://www.mlive.com/news/flint/index.ssf/2013/03/flint_city_council_again_delay.html]** , may have set in motion the end to Flint paying to get its water from Detroit.

Under the proposal, Flint would get 16 million gallons per day of raw water from Lake Huron, pipe it to Flint for treatment and then sell it to customers throughout the city. Another 2 million gallons per day would come from the Flint River and will be treated in Flint.

Mayor Dayne Walling said the Department of Environmental Quality must approve Flint's getting 2 million gallons per day from the Flint River.

Tuesday's meeting followed weeks of discussions and special meetings surrounding the resolution.

"We got there," Councilman Joshua Freeman said. "That's the important thing."

There were more than 50 people at Monday's meeting.

"Going with Karegnondi is the best decision. We have no opinion on the economics of the decision," said Rebecca Fedewa, Flint River Watershed Coalition executive director. "If we start drawing water out of the Flint River, we are at risk of having to start releasing water from our reservoirs."

Genesee County Drain Commissioner Jeff Wright said the decision must still be approved by a county water and waste advisory board. The KWA board will then be reconvened for final approval.

Wright said construction could start in May.

State treasury officials still must approve the city council's move because Flint has an emergency financial manager. All expenditures over $50,000 must be approved.

Genesee County Drain Commissioner Jeff Wright has said that Flint would pay roughly $6.4 million annually for water service if it joined the pipeline – a nearly $4 million savings on what it pays Detroit for water.

Walling previously said the **city would save $19 million over eight years [http://www.mlive.com/news/flint/index.ssf/2013/03/flint_city_council_delays_deci.html]** by getting water from the KWA.

"It's a historic night in the City of Flint," Walling said. "The savings will be less with the capacity level approved by city council because there will be increased treatment cost for the river water."

He said the DEQ told the city it needed to get 18 million gallons per day or there would have to be additional work done at Flint's water plant.

Flint's water plant and the Flint River is currently the backup for Flint and Genesee County, however, the plant only operates four times per year.

Councilman Bryant Nolden was the lone dissenting vote.

"It was a protest vote," Nolden said. "I knew they had enough votes. I just feel like the Flint River is our best option."

Karengnondi is the regional water authority that includes Genesee, Lapeer and Sanilac counties and the cities of Flint and Lapeer.

Flint is the second municipality, behind Genesee County, to officially decide to purchase raw water through the KWA. Lapeer city officials said they intend to purchase water, but an agreement has been finalized.

March 26, 2013

CONTACT: Jeff Wright

810-287-1925

What: Jeff Wright Statement on Flint City Council Approving Resolution to Join KWA.

When: March 26, 2013

Additional Info: Jeff Wright, CEO of the KWA, today praised the Flint City Council for voting to approve a resolution to officially have the City of Flint join the KWA and its' water line.

"I have said from the beginning that this decision must be made by Flint's City Council and Mayor," said Wright. "I appreciate the council voting the way they did, but even more than that, I am glad the residents of Flint were able to have their voices heard via their elected officials." The next step in the process will come with the KWA Board executing the contract for the City.

"The most important aspect from the vote is the fact that we as an Authority can move forward knowing Flint's intentions," said Wright.

Despite Emergency Manager Ed Kurtz publicly supporting the project, Wright had made a vote by council a condition of Flint joining the KWA so the residents would have their say.

"There is a basic tenet that government is best when it has local control. We saw that with the council vote. Nobody, whether they live in Flint, Grand Blanc, Davison, Fenton, or anywhere in Genesee County, should have these types of decisions made by people who live outside of their community," said Wright.

At the next Water and Waste Advisory Board meeting a vote will be taken to award a contract for construction of the intake portion of the water line. All bids were submitted to the board at their last meeting for review.

STATE OF MICHIGAN
DEPARTMENT OF TREASURY
LANSING

RICK SNYDER
GOVERNOR

ANDY DILLON
STATE TREASURER

Mr. Edward Kurtz
Emergency Manager
City of Flint
1101 South Saginaw Street
Flint, MI 48502

April 11, 2013

Dear Mr. Kurtz:

Thank you for your March 29, 2013 letter, which is attached for reference. As the Emergency Manager for the City of Flint ("Flint" or "City"), you have asked for my concurrence, pursuant to Public Act 436 of 2012, the Local Financial Stability and Choice Act, to authorize a contract in excess of $50,000.00 not subject to competitive bidding. This request was related to the City entering into an agreement with the Karegnondi Water Authority (KWA) for provision of raw water for the City.

In considering your request, I took note of the following facts in support of Flint joining KWA. First, there is widespread support in the City for this move, including the support of the Mayor, the City Council, and the Emergency Manager. Second, this move will provide a unique opportunity for the City and County to partner on an important project, which will hopefully lead to future regional collaboration. Third, the Department of Environmental Quality is supportive of the City participating in the KWA project. Finally, your representations that this deal will lead to substantial savings for the City over the coming decades, savings that are desperately needed to help with the turnaround of the City of Flint.

It is my understanding that the Detroit Water and Sewer Department is making a final best offer to Genesee County and the City of Flint next Monday, April 15, 2013. As such, this approval will be effective at 5 pm on April 16, 2013 after receiving written notice from the City that either no such offer was presented to the county and the City or that an offer was received and was rejected in good faith based upon specified objections.

For the reasons described above and subject to the conditions set forth herein, pursuant to Section 12 (3) of PA 436 of 2012, I am authorizing you to proceed with adopting the resolution and entering into a contract with KWA.

Sincerely,

Andy Dillon
State Treasurer

on March 25, 2013 at 7:17 PM, updated March 26, 2013 at 7:43 AM

FLINT, MI -- Flint residents may soon get their water from Lake Huron.

The Flint City Council voted 7-1 to get 16 million gallons per day from the Karegnondi Water Authority.

"This is about compromise," said Councilman Sheldon Neeley.

Neeley got support from Councilman Joshua Freeman, after the two were previously at odds about the amount the city should withdraw from Lake Huron.

Councilman Bryant Nolden was the lone "no" vote.

"It was a protest vote," Nolden said. "I just feel like the Flint River is our best option."

Genesee County Drain Commissioner said construction of the pipeline could start in May.

The city currently pays to get its water from Detroit.

State treasury officials still must approve the city council's move because Flint has an emergency financial manager. All expenditures over $50,000 must be approved.

Questions with some draft answers. Not by any means final, but here's my first crack at this.

Flint Drinking Water

Media Q&A

Oct. 8, 2015

Switch to Great Lakes Water Authority

What finally pushed the state to this decision?
This was the City's request, and the Governor supports it, based on several key factors: In the near term, DWSD water will be easier to manage. It comes from a more stable source than the river, it is fully optimized for corrosion control, and it is clear that residents of Flint have more confidence in this water source.

Will this solve Flint's water crisis?
In combination with the other short term, intermediate term and long-term steps outlined last week, this move represents a big step forward. Flint still has serious system maintenance challenges it must address.

If you're saying residents will still have lead because of their plumbing, does that mean every other city in this state has a lead problem?
Many areas of the state have lead in their infrastructure mix.

Where's the state getting the money to fund this?
We have submitted a formal request to lawmakers via the appropriations process.

Where's the city getting the money to fund this?
The city is contributing all it can, and is getting assistance for its match from the Mott Foundation.

How long will the switch take?
The switch will be completed by the City and Great lakes Water Authority, but our understanding is that it can be accomplished in the very near term once the arrangements are complete.

How long will it take before Detroit's corrosion controls provide protection for Flint?
It will take some time for the corrosion control additives to build on pipe walls throughout the system. Estimates vary. The state can assure we will commence monitoring of the system early 2016 and report results as we get them to keep the community updated.

Why do residents still need to use filters and bottled water?
The filters and bottled water are responsible precautions for any resident concerned about lead exposure.

Do the filters actually work? We've been hearing they don't protect for lead.
Yes, the filters work. They are all certified for lead removal by the National Sanitation Foundation.

The filters are only good for 100 gallons. What happens when they are used up?
They will need to be replaced. And residents can get a new filter.

What about restaurants?

What's going to be done about lead service lines?
Long term, this is the only permanent solution to lead exposure. The state has committed to helping the city accomplish this goal long term.

Do you wish you'd made this switch sooner?
We support the City's decision. We can't look backward. We feel the state has responded quickly and effectively as information has surfaced, been investigated and verified. While the City of Flint is, right now, in compliance with the federal Lead and Copper Rule, we recognize there is a disparity between surveillance testing and other testing happening in the community that we need to better understand and we are working on developing our knowledge.

<u>Schools testing</u>
What do these results say?
The results say we need to further investigate Flint schools and help the schools find clearer causes for some the results we got.

Any theories about what's going on?
It is possible there are specific points in the plumbing that have lead components which need to be replaced, but we can't say anything definitively until we perform an investigation at each school.

Do the schools have lead service lines? If not, why are they getting such high results?
The schools we tested initially do not have lead service lines. There are a few possible reasons why lead is being detected at specific points in the buildings and not others. When we know things definitively, we will make the information public.

How long do the schools have to stay on bottled water? Just until the switch to Detroit, or longer term?
We are encouraging the schools to continue their current protective measures as a precaution until we can get into the buildings and get more answers.

Why did you only test 13 schools?
That was what the Flint Public Schools requested.

What happens to other schools?
We will test all the schools in Flint if they request it.

What about the schools that can't afford to update their entire plumbing systems?
This is why we are having plumbing assessments completed. There is no way to know yet what each building will require.

How confident are you in your testing? You've got results all over the map.
We are confident that our testing meets the requirements for the federal Lead and Copper Rule, which is surveillance monitoring. The bigger question is whether surveillance monitoring meets the public health protection standards that Lead Exposure Testing methods do. The EPA is working on that question now, and we are engaged in that dialogue.

What do you mean by "health exposure testing"? What are you doing next?

The 90th percentile of your results is still below 15 ppb. Does that make you more or less confident in your testing and in your protocols?
It makes us confident that the testing protocol delivers consistent results. But again, it does raise questions about whether this testing method shows what people think it does or what they really want to know, which is actual lead exposure from lead plumbing in a home.

Any idea how long kids have been exposed to lead? Was it before the move to the Flint River?
That is possible. We don't know.

How does the state bring this new information into the broader picture of kids' lead exposure across the state?

Hi Laura,
Only change I have is in the 5th paragraph. It should be changed to read "The move to Detroit water carries many health benefits." I think that was a typo in the original press release.

Otherwise, looks good. Thanks!
Karen

Subject: FLINT WATER : New form letter- questions

Hi Team,

Please see below the proposed Flint Water form letter….

For our knowledge/ not the letter:
If someone can give me information on the initial switch that would be helpful- when, why.

Also, the action timeline from when the state found out about the lead, up to today.

Let me know if we are good to go on the letter.

Thank you,

Laura

Thank you for your recent correspondence sent to Governor Rick Snyder regarding the water in Flint. As a member of Governor Snyder's staff, I am responding on his behalf.

Flint families and children will be better protected by reconnecting with the Great Lakes Water Authority as the source of the city's drinking water until the Karegnondi Water Authority pipeline is completed. Governor Snyder has asked the state Legislature to provide half, or $6 million, of the $12 million needed to reconnect with the authority through next summer, when the KWA is expected to be completed. The Flint city government will provide $2 million and the Charles Stewart Mott Foundation has committed $4 million.

Governor Snyder said "Flint residents need to have access to safe, clean, water now and long into the future." The technical experts helping the city on its water advisory all agree this move back to the Great Lakes Water Authority provides the best public health protection for children and families. The Governor appreciates Detroit's willingness to reconnect with Flint, the Mott Foundation's generous commitment, and the dedication of all parties to come together to protect Flint families and children.

Flint city leaders requested the state's help to fund the reconnection and to assist with health and infrastructure issues. Flint's move to the Great Lakes Water Authority is expected to cost about $1.3 million per month until the Karegnondi Water Authority is completed next summer.

The move to Detroit water, which is expected to carry, carries many public health benefits. As large bodies of water, the Great Lakes are naturally prone to fewer problems from large rain events and other runoff issues that can sometimes be present in shallower rivers. Additionally, the Great Lakes Water Authority water already has additional corrosion control, using phosphates to help coat the insides of pipes and limit lead from leaching into the water. However, reconnecting with the authority will not completely resolve the city's problem with lead service lines or aging infrastructure. It will take time for pipes in Flint to become coated with the phosphate corrosion control. Additionally, some households in the city could experience lead in their drinking water until all lead pipes and plumbing are replaced.

To best protect public health, Governor Snyder, state, and local authorities will continue to carry out steps outlined on Oct. 2 in a comprehensive action plan, including continued testing, the use of faucet filters and providing residents with accurate information about steps to eliminate lead exposure. The Michigan Departments of Environmental Quality (DEQ) and Health and Human Services (MDHHS) also committed an additional $3.5 million for water filters, free lead testing through the state laboratory for Flint water customers, and hiring additional staff to conduct health exposure monitoring for lead in drinking water.

Free filters are available for current MDHHS clients at the 125 E. Union St. or 4809 Clio Road MDHHS office locations. For residents who are not currently enrolled in MDHHS assistance programs, free filters are available at the Genesee County Community Action Resource Department offices at 2727 Lippincott and 601 North Saginaw in Flint. Staff will be at all four locations from 9 a.m. to 4 p.m., Monday through Friday, to distribute filters and assist residents who have questions about proper installation. At the Lippincott location only, extended hours will be offered this weekend, including until 7 p.m. on Thursday and Friday and from 10 a.m. to 2 p.m. on Saturday.

Other good practices for residents concerned about lead include turning on the cold water tap and running the water until it's as cold as it will go. Additionally, only use cold water for cooking, drinking and especially mixing baby formula.

School test results released; more investigation planned

The state also released the first results from its lead screening program in schools and homes. Of 37 total samples taken at 13 buildings, four samples spread over three buildings exceeded the federal action level of 15 parts per billion.

However, this sampling provides only an initial screen, and the state is committing to further testing water and inspecting plumbing at these schools. Until testing is complete, schools are advised to continue using bottled water and filtration as a precaution to protect children.

In addition, free testing is still available for any other Flint school, including daycares and Head Starts. Free testing is also available for any Flint resident.

Please visit Michigan.gov/Flintwater for additional resources.

Thank you, again, for taking the time to share your concerns with our office. Should you have any further comments, questions or concerns regarding this or any other state-related matter, I've included my contact information below.

Sincerely,

Laura Stoken

Hello,

ABC12 is in Lansing today and wanted to be in the loop on getting information when the Governor signs the Flint Water Fix Bill.

I also wanted to ask- the money approved is intended to tie the city over until KWA is up and running which we heard is expected to be June of 2016- what if KWA is not ready? Would Flint continue to stay on Detroit water system- if so, who/how would that bill be paid? Or would city be forced back onto River Water?

Thanks,
Damon

Subject: PRESS RELEASE: City of Flint Reconnects to Detroit Water
Attachments: CoF.DWSD.Agreement.2015.pdf

For Immediate Release

City of Flint Reconnects to Detroit Water

Flint, Michigan – October 16, 2015 – Flint has reconnected to Detroit water. reached an agreement with the Detroit Water and Sewerage Department (DWSD) for the temporary provision of treated Lake Huron water to Flint. Work to establish the reconnection will begin immediately in a coordinated effort between the City of Flint, Genesee County and the DWSD.

A tremendous effort by all three partners, along with the efforts of the Governor and the State Legislature, ensured that this action occurred as quickly as possible. "The money from the state to begin fixing Flint water by reconnecting to Detroit is just a start – a down payment,´ said Mayor Dayne Walling. "I am not going to stop until every drop of drinking water in Flint is 100% safe."

Detroit water will be introduced into the Flint system throughout the evening. It is expected that the thorough replacement from Flint River water to Detroit water will happen after approximately three weeks. Residents in Flint may see discoloration as well as noticing some taste and odor issues during the transition.

Water provided by DWSD will contain corrosion control agents to hinder the leaching of lead from old pipes into the water; however, the City will also be adding additional corrosion control agents to further minimize the risk presented by lead pipes.

The contract between the City and DWSD calls for the provision of 12.5 million gallons per day (mgd) of treated water from Lake Huron at a cost of $1.1 million per month. DWSD Director Sue McCormick noted that the talks between Flint, DWSD and the GLWA Board were very cordial: "everyone acted in a spirt of cooperation in order to come to this agreement." Flint will purchase water from Detroit until the Karegnondi Water Authority (KWA) pipeline can be completed in 2016. At that time, the KWA will become the primary water source for the City and the Flint River will remain as a backup system.

Residents with questions or concerns about the hydrant flushing in their area can call the Water Service Center at 810-766-7202. Continuing information on water will be provided via the City of Flint's website, cityofflint.com.

For Immediate Release

City of Flint Reconnects to Detroit Water

Flint, Michigan – October 16, 2015 – Flint has reconnected to Detroit water. reached an agreement with the Detroit Water and Sewerage Department (DWSD) for the temporary provision of treated Lake Huron water to Flint. Work to establish the reconnection will begin immediately in a coordinated effort between the City of Flint, Genesee County and the DWSD.

A tremendous effort by all three partners, along with the efforts of the Governor and the State Legislature, ensured that this action occurred as quickly as possible. "The money from the state to begin fixing Flint water by reconnecting to Detroit is just a start – a down payment,´ said Mayor Dayne Walling. "I am not going to stop until every drop of drinking water in Flint is 100% safe."

Detroit water will be introduced into the Flint system throughout the evening. It is expected that the thorough replacement from Flint River water to Detroit water will happen after approximately three weeks. Residents in Flint may see discoloration as well as noticing some taste and odor issues during the transition.

Water provided by DWSD will contain corrosion control agents to hinder the leaching of lead from old pipes into the water; however, the City will also be adding additional corrosion control agents to further minimize the risk presented by lead pipes.

–CONTINUE–

Dayne Walling
Mayor

Natasha L. Henderson
City Administrator

The contract between the City and DWSD calls for the provision of 12.5 million gallons per day (mgd) of treated water from Lake Huron at a cost of $1.1 million per month. DWSD Director Sue McCormick noted that the talks between Flint, DWSD and the GLWA Board were very cordial: "everyone acted in a spirt of cooperation in order to come to this agreement." Flint will purchase water from Detroit until the Karegnondi Water Authority (KWA) pipeline can be completed in 2016. At that time, the KWA will become the primary water source for the City and the Flint River will remain as a backup system.

Residents with questions or concerns about the hydrant flushing in their area can call the Water Service Center at 810-766-7202. Continuing information on water will be provided via the City of Flint's website, cityofflint.com.

All,

Darnell Earley asked that I send you the draft of an OpEd regarding the Flint Water issue that he would like to send to the media this week.

He is seeking your input before sending, and is looking for any feedback you might have by tomorrow afternoon. He has intentionally placed it on his EM letterhead as he is still acting in the capacity of an EM.

Thank you.

Op/Ed Re: Changes to Flint Water System Made By Local Leaders, Not EM ***DRAFT***
Author: Darnell Earley, ICMA-CM, MPA

It is critically important that the record be set straight about the decision-making and approval processes that led to Flint joining the Karegnondi Water Authority (KWA) with the use of Flint River water as the interim water supply. Contrary to reports in the media and rhetoric being espoused by individuals, the decision was made at the local level, by local civic leaders.

The fact of the matter is that the decision to separate from Detroit Water and Sewerage Department and go with the KWA, which included the decision to pump Flint River water in the interim, were both a part of a long-term plan that was approved by Flint's Mayor, and confirmed by a City Council vote of 7-1 on March 25, 2013. This plan was presented to me when I was appointed as Flint Emergency Manager - a full seven months after City Council's affirmative vote.

Genesse County Drain Commissioner Jeff Wright also made the affirmative vote by the City Council a necessary condition of joining the KAW, and applauded the decision in a March 26, 2013 news release, saying, "…I have said from the beginning that this decision must be made by Flint's City Council and Mayor…I am glad that the residents of Flint were able to have their voices heard via their elected officials."

The Mayor's approval of the plan, and the subsequent near unanimous vote by City Council were in no way coerced, forced or demanded by the State, nor any Emergency Manager. Council's affirmative vote was supported and officially signed into emergency order by then Emergency Manager Edward Kurtz on March 29, 2013. A subsequent order Kurtz signed on June 26, 2013, speaks specifically to the, "… upgrading of the Flint Water Plant to ready it to treat water from the Flint River to serve as the primary drinking water source for approximately two years and then converting to KWA delivered lake water."

When I began my term as Emergency Manager in October 2013, it fell to me to oversee the implementation of the previously accepted and approved plans, as the contract with DWSD expired in April 2014. It did not fall to me to question, second guess or to invalidate the actions that were taken prior to my appointment.

At the time the decision was made there was no way to predict such an unfortunate outcome. I would also offer that had local leaders known then what they know now, parts of their decision may have been entirely different. What the City of Flint and the State of Michigan are now dealing with is the management of an unintended consequence resulting in a negative outcome from an otherwise sound public policy decision. There is no "blame" to affix for that.

As the solutions are put into place to address the serious concerns at hand, I believe that everyone's attention should turn toward another serious concern -- what is being done in the long-term to replace the aged and

crumbling water distribution systems that exits throughout Flint and Genesee County, which was a major contributing factor to this serious issue in the first place.

I am a strong believer that the truth supported by fact, speaks for itself. This was a local decision that was made by local civic leaders. Anyone who says otherwise is being disingenuous for whatever reason. In the words of Mahatma Ghandi, *"Truth never damages a cause that is just."*

Progress Michigan: MDEQ's Wyant Needs to Go

The Flint water crisis shows a lack of leadership at the MDEQ

LANSING — In the wake of the Flint water crisis, where children across the city were poisoned with high levels of lead in the drinking water, Progress Michigan is calling for the ouster of the head of the Michigan Department of Environmental Quality, Dan Wyant.

Recent reports show that Wyant and the MDEQ were warned by the Environmental Protection Agency as early as February that lead was leaching into the water pipes in Flint due to the corrosive nature of the Flint River water. Gov. Rick Snyder's emergency manager made the switch from Detroit water to Flint River water.

"You can't simply reshuffle some staff at the department to make up for poisoning thousands of Flint children. When families and kids are told their drinking water is safe and it's actually filled with toxins, someone needs to be held accountable. It starts at the top with Wyant," **said Lonnie Scott, executive director of Progress Michigan.** "He needs to resign immediately or Gov. Snyder needs to quickly show him the door. This crisis was allowed to fester and grow under his watch and Wyant needs to go. Families in Flint deserve to know that Gov. Snyder is taking this problem seriously and is willing to take serious action."

tommasulok@michigan.gov

After-Action Review Q&A

Is the Flint Water Advisory Task Force independent? They were appointed by the Governor.

None of the task force members are city, state or federal employees, and none have been previously involved in the drinking water situation in Flint. They bring diverse expertise in pediatrics and internal medicine, environmental protection, water and wastewater asset management, and environmental policy. We are pleased to have their participation.

What is the task force's scope and mission?

The Flint Water Advisory Task Force will look at the procedures and protocols used by the City of Flint, the Michigan DEQ and the U.S. EPA during and after its switch to using the Flint River as its source of drinking water. The group will also review whether the present procedures, protocols, statutes, policies and rules that govern drinking water systems are enough to protect the public health of Michigan residents.

Will the Flint Water Advisory Task Force look at corrosion control and the Lead and Copper Rule?

Yes. If necessary, the Flint Water Advisory Task Force could include proposed amendments to the Lead and Copper Rule or other protocols regulating corrosion control in its final report to the Governor.

What types of information will the task force look at to make its determinations?

The Flint Water Advisory Task Force will have any and all information at its disposal, including reports, emails, permits and any other documents needed.

Will the task force be empowered to fire anyone, or is that a recommendation they can make?

The task force's after-action review is focused on proactive recommendations to prevent future problems with lead in drinking water and to better protect public health statewide. They will offer a comprehensive set of recommendations they deem appropriate to the situation.

Is the panel made up of drinking water or lead experts?

The panel includes four members with diverse expertise in water and medicine. Their areas of specialty include pediatrics and internal medicine, environmental protection, water and wastewater asset management, and environmental policy, and we are pleased to bring their experience to the issue.

How long is the after-action review going to take?

The Flint Water Advisory Task Force will summarize its work in a report to be presented to the Governor within 90 days.

So will the results and the report to the Governor be made public?
The full report will be made public.

How does this help the people of Flint?
The after-action review is designed specifically to ensure the state learns from the experience in Flint and can better protect public health going forward. In the meantime, the city has reconnected to the Great Lakes Water Authority, and residents are encouraged to continue to use water filters and other protective measures to ensure safe drinking water while the long-term fixes of connecting to the Karegnondi Water Authority and replacing outdated local lead infrastructure is completed.

Good afternoon, Gentlemen.

Please find the City's wire transfer information below.

PPI

A copy of the outgoing wire transfer confirmations totaling $10 million is attached. The first wire was sent to DWSD on Friday, October 16, in the amount of $2 million. The remaining balance of $8 million was sent on Monday, October 19, in two separate transactions of $3 and $5 million due to max transfer limitations.

Please let me know if you have any questions or if I may be of any further assistance.

Best regards,

PROVIDER DRAFT LETTER V.2
October 22, 2015
LoRocco Edits,Travis Edits,Attisha Edits, Peeler Edits
Cross checked with parent letter

Dear Provider:

As you may be aware from recent news reports, elevated levels of lead have been found in the City of Flint's water system.

To help protect the children of Flint from the current lead in water exposure, the Genesee County Health Department and Michigan Department of Health and Human Services are contacting you to assist you in providing guidance to support your families.

Children can be exposed to lead from drinking water in lead pipes, old lead paint, soil, pottery, cosmetics and toys and some home remedies. Adult jobs and hobbies, like auto repair, stained glass and jewelry making, and ammunitions handling can also put children at risk if they touch clothing or play in areas where lead is found.

As a primary care provider, you play a critical role in helping to ensure that children and families exposed to lead receive the care and reassurances they need to manage the potential health impacts of lead poisoning.

Identification. Children suffering from lead poisoning often fail to present outward symptoms. However, early clinical symptoms can include anemia, anorexia, abdominal pain and constipation. Lead is a neuro-toxin, and exposure can result in violent and aggressive behaviors, lead to learning disorders, may cause Attention Deficit Hyperactivity Disorder (ADHD) and has been known to reduce IQ by as many as 5-8 points with levels as low as 10 ug/dL. Lead is metabolized through the gastrointestinal system similar to iron and calcium, with uptake rates depending on the size and weight of the child. The blood half-life of lead is short (approximately 1 month) but the bone half-life can extend into decades.

Due to multiple risk factors facing many residents in the City of Flint (including aging housing conditions and water quality), we recommend that all children under age 6 living in the City of Flint or living in homes that use Flint water, attending school or childcare in Flint, or who spend time with a caregiver in the City of Flint, receive a blood lead test. Blood lead testing should be done through a child's primary care doctor to ensure adequate short-term and long-term follow-up. ***Families should be encouraged to have their children tested immediately either at their doctor's office or the Genesee County Health Department***.

Management of Blood Lead Levels. The following guidance is provided for management of childhood blood lead levels:

- **BLL < 5 ug/dL**
  - A lead level of less than 5 mcg/dL is not typically cause for concern.
  - Provide education and anticipatory guidance to ensure that lead levels do not rise.
  - Consider retesting in 12 months based on risk factors or concerns.
- **BLL >5 ug/dL**
  - **Children with capillary results of 5 ug/dL and higher must have a confirmatory venous blood draw.**
  - Families should receive anticipatory guidance, nutrition counseling, instruction on safe cleaning techniques and appropriate follow-up care from their primary care provider.
  - In-home services including case management and environmental investigations are available for all children with lead levels greater than 5 ug/dL. Refer patients to the Genesee County Health Department for this service.
  - Children with confirmed venous testing results greater than 5ug/dL within the past 18 months must be retested based on Medicaid policy and AAP guidelines. (See attached "Provider Quick Reference). If a child has not been retested within these timeframes, retesting is recommended as soon as possible.
- **BLL > 44 ug/dL.**
  - **Children with capillary results of 5 ug/dL and higher must have a confirmatory venous blood draw.**
  - Lead levels over 44 ug/dL may require hospitalization. Consult with an expert at the Children's Hospital of Michigan in Detroit for additional guidance.
  - Families should receive anticipatory guidance, nutrition counseling, instruction on safe cleaning techniques and appropriate follow-up care from their primary care provider.
  - In-home services including case management and environmental investigations are available for all children with lead levels greater than 5 ug/dL. Refer patients to the Genesee County Health Department for this service.
  - Children with confirmed venous testing results greater than 5ug/dL within the past 18 months must be retested based on Medicaid policy and AAP guidelines. (See attached "Provider Quick Reference). If a child has not been retested within these timeframes, retesting is recommended as soon as possible.

Reminder: All children covered by Medicaid must be tested at age 1 and 2.

Follow-up Care. As providers, there are steps you can take to help support your families:

1. Continue to educate families regarding lead risks and preventative steps that they can take to minimize their risks.
2. Encourage your families to use filtered water for drinking, mixing formula and washing dishes. Families can contact 2-1-1 for information on free water filters.
3. Healthy nutrition is critical for lead-exposed children. Make sure your patients are consuming balanced diets high in iron, calcium and Vitamin C. If you have concerns about their nutrition, consider recommending a multivitamin with iron. WIC and SNAP provide assistance to parents and children who need fresh and healthy foods. Contact the Genesee County WIC office at (810) 237-4537 to learn more. In addition, SNAP offers a Double Bucks program that can provide healthy foods for less.
4. Breastfeeding is highly protective and encouraged. However, if the mother's blood lead level rises above 40ug/dL or her level is greater than 20 ug/dL and the baby has a level above 5 ug/dL breastfeeding is not recommended.
5. Because lead is a neuro-toxin, children with lead poisoning need longitudinal follow-up and may require developmental and behavioral health intervention services. Continue monitoring your patients' development at every visit.
6. Consider additional wrap-around and support services that will benefit your patients such as early childhood home visiting programs, early head start and head start. Call 2-1-1 for more information.

Local Resources. Several local resources are available to you and your patients:

- Blood Testing. Patients are encouraged to contact their primary care provider for testing. The Genesee County Health Department also administers lead tests. Patients in need of transportation should contact 2-1-1 for assistance.
- Water Testing. Water testing is free through the City of Flint Water Testing Plant. Patients can call 810-787-6537 to learn more.
- WIC and SNAP provide assistance to parents and children who need fresh and healthy foods. Contact the Genesee County WIC office at (810) 237-4537 to learn more.
- Child Development. If you have concerns about a child's growth, development or learning contact 2-1-1 for a Home Visiting Program in your area.

draft 3

October 22, 2015

Dear Parent,

To help make sure the children of Flint are safe from lead exposure, the Genesee County Health Department and the Michigan Department of Health and Human Services want to help you understand:

- Where does lead come from?
- What can I do to protect my family?
- Should I get my child tested for lead?
- Where can I find more information about lead?

Where does lead come from?

Lead is a serious health hazard, especially for small children who become lead poisoned when they eat, drink or breathe lead. Elevated levels of lead have been found in the drinking water from lead pipes in the City of Flint. Kids can also be exposed to lead from old lead paint, soil, pottery, cosmetics and toys and some home remedies. Adult jobs and hobbies, like auto repair, stained glass, jewelry making and ammunitions handling can also put children at risk if they touch clothing or play in areas where lead is found.

Should my child get a blood lead test?

Children who live in the City of Flint, live in a home using City of Flint water, or who attend school, childcare or often spend time with a caregiver in the City of Flint should be tested for lead poisoning. *This should be done as soon as possible.*

Where should I go to get a blood lead test for my child?

The best place to get your child's blood lead test is your doctor's office. Your pediatrician will follow up with you on lab tests and provide you with information on what to do next. You can also have a lead test at the Genesee County Health Department. If you need transportation, contact 2-1-1 for help.

Understanding your child's lead test result.

A lead level below 5 means there is little or no lead in your child's blood. Use the tips below to help keep your child safe. Your doctor may suggest retesting your child within the next 12 months to make sure the level does not go up.

Draft 5

A lead level of 5-14 means that your child has had some exposure to lead. Work with your doctor and local health department for further guidance on how to limit your lead exposure. Your doctor may retest your child in 1-3 months to make sure the level does not go up.

Children with very high levels of lead **(over 40)** may require treatment at the hospital.

What Can I Do to Keep My Family Safe?

The following steps should be taken right away to help protect you and your child.

Protecting your family from lead in the water:

- Get your water tested for lead. It's free. Call 810-787-6537 to learn more.
- Use a water filter in your home. Call 2-1-1 for information on free water filters.
- If you do not have a water filter, use bottled water for drinking and mixing formula.
- When cooking or washing the dishes use filtered water. If using unfiltered water, run the water for at least five minutes before you use it.
- Always use cold water when cooking.

Safe cleaning:

Safe Cleaning is Important. Keeping your home clean and safe from lead hazards will help to protect your family.

- Keep children away from lead paint and dust.
- Use wet paper towels to clean up lead dust. Be sure to clean around windows, play areas and floors.
- Wash hands and toys often, using soap and water

Good nutrition:

Some foods will help keep lead from being stored in a child's body. These are foods with a lot of calcium, iron and vitamin C. These foods include:

Calcium Rich Foods	Iron Rich Foods	Foods with Vitamin C
➢ Milk	➢ Beans	➢ Oranges
➢ Cheese	➢ Lean meats like fish and chicken	➢ Orange juice
➢ Yogurt	➢ Whole grain cereals	➢ Grapefruits
➢ Tofu	➢ Peanut butter	➢ Tomatoes
➢ Spinach		➢ Green peppers

Always wash your fruits with filtered water. If you are concerned about your child's diet, talk with your pediatrician who may also recommend a daily multivitamin.

Draft

WIC and SNAP provide assistance to parents and children who need fresh and healthy foods. Contact the **Genesee County WIC office at (810) 237-4537** to learn more. SNAP also offers a Double Bucks program to purchase even more healthy food for no additional costs.

Draft 5

GCHD and MDHHS Partner to Issue Guidance to Flint Parents, Providers

FLINT, Mich. – In a joint effort to continue education within the community around lead exposure, the Genesee County Health Department (GCHD) and Michigan Department of Health and Human Services (MDHHS) today issued letters to the provider community and parents in Flint to assist in providing guidance to support families.

In response to the elevated blood lead levels found in some Flint children, GCHD and MDHHS have worked together closely and with Dr. Mona Hanna-Attisha of the Hurley Medical Center to develop guidance for families and providers.

GCHD QUOTE

Parents are being provided information regarding lead testing, how to reduce lead exposure for your family, where lead comes from, and community and state resources for more information. Children can be exposed to lead from drinking water in lead pipes, old lead paint, soil, pottery, cosmetics and toys and some home remedies. Adult jobs and hobbies, like auto repair, stained glass and jewelry making, and ammunitions handling can also put children at risk if they touch clothing or play in areas where lead is found.

"As we continue to find ways to educate and guide the Flint community towards reducing lead exposures, we are appreciate of the collaboration with Genesee County Health Department and Dr. Attisha," said Dr. Eden Wells, Chief Medical Executive with MDHHS. "Parents and providers can take a number of steps to help reduce exposure, identify signs of lead poisoning, and begin follow up care as needed. Working together we can all help to protect the health of families in Flint."

Primary care providers can assist in helping to ensure that children and families exposed to lead receive the care and resources they need to manage the potential health impacts of lead poisoning. Guidance was provided to them regarding identification of lead poisoning, management of elevated blood lead levels, follow-up care, and community and state resources.

GCHD and MDHHS issued the following recommendations for parents:

- Families who live in the City of Flint and are on the Flint water system or who attend school, childcare, or spend time with a caregiver in the City of Flint, are encouraged to get their children tested for lead poisoning at their doctor's office or GCHD.
- Families can get their water tested for lead for free. Call 810-787-6537 for details about how.
- Families are encouraged to use a water filter in their home, and free filters are still available. Call 2-1-1 for information about where to pick up a free filter.
- When cooking or washing the dishes, use filtered water. If using unfiltered water, run the water for at least give minutes before you use it. Always use cold water when cooking.
- Safe cleaning can also reduce the risk of lead exposure in the home. Keep children away from lead paint and dust; use wet paper towels to clean up lead dust around windows, play areas and floors; and wash hands and toys often, using soap and water
- Lastly, always wash fruits with filtered water. Some foods help keep lead from being stored in the child's body, such as Calcium rich foods, Iron rich foods, and foods with Vitamin C.

GCHD and MDHHS will continue to provide more information to the community regarding reducing lead exposure and protecting the health of Flint residents. For more information, visit www.michigan.gov/lead.

GCHD and MDHHS Partner to Issue Guidance to Flint Parents, Providers

FLINT, Mich. – In a joint effort to continue informing the community about lead exposure, the Genesee County Health Department (GCHD) and Michigan Department of Health and Human Services (MDHHS) today issued letters to parents and the provider community in Flint to assist in providing guidance to support families.

In response to the elevated blood lead levels found in some Flint children, GCHD and MDHHS have worked together closely to develop guidance for families and providers.

GCHD QUOTE

Parents are being provided information regarding lead testing, how to reduce lead exposure for your family, where lead comes from, and community and state resources for more information. Children can be exposed to lead from drinking water in lead pipes, old lead paint, soil, pottery, cosmetics and toys and some home remedies. Adult jobs and hobbies, like auto repair, stained glass and jewelry making, and ammunitions handling can also put children at risk if they touch clothing or play in areas where lead is found.

"As we continue to find ways to inform and guide the Flint community towards reducing lead exposures, we are appreciate of the collaboration with Genesee County Health Department," said Dr. Eden Wells, Chief Medical Executive with MDHHS. "Parents and providers can take a number of steps to help reduce exposure, identify signs of lead poisoning, and begin follow up care as needed. Working together we can all help to protect the health of families in Flint."

Primary care providers can assist in helping to ensure that children and families exposed to lead receive the care and resources they need to manage the potential health impacts of lead poisoning. MDHHS and GCHD worked with Dr. Mona Hanna-Attisha of the Hurley Medical Center to develop testing protocols and guidance regarding identification of lead poisoning, management of elevated blood lead levels, follow-up care, and community and state resources.

GCHD and MDHHS issued the following recommendations for parents:

- Families who live in the City of Flint and are on the Flint water system or who attend school, childcare, or spend time with a caregiver in the City of Flint, are encouraged to get their children tested for lead poisoning at their doctor's office or GCHD.
- Families can get their water tested for lead for free. Call 810-787-6537 for details about how.
- Families are encouraged to use a water filter in their home, and free filters are still available. Call 2-1-1 for information about where to pick up a free filter.
- Use filtered tap water for drinking (including making coffee, drink mixes, juice, baby formula), and cooking (even if you boil the water, the lead will stay in the water and food). Always use cold water when cooking.
- You can use unfiltered tap water for washing your hands, and washing dishes. If using unfiltered water, run the water for at least five minutes before you use it.
- Safe cleaning can also reduce the risk of lead exposure in the home. You can use unfiltered tap water for the following wiping down countertops, mopping floors, and washing clothes.

- Keep children away from lead paint and dust; use wet paper towels to clean up lead dust around windows, play areas and floors; and wash hands and toys often, using soap and water
- Lastly, always wash fruits with filtered water. Some foods help keep lead from being stored in the child's body, such as Calcium rich foods, Iron rich foods, and foods with Vitamin C.

GCHD and MDHHS will continue to provide more information to the community regarding reducing lead exposure and protecting the health of Flint residents. For more information, visit www.michigan.gov/lead.

# # #

October 25, 2015

Dear Parent,

To help make sure the children of Flint are safe from lead exposure, the Genesee County Health Department and the Michigan Department of Health and Human Services want to help you understand:

- Where does lead come from?
- What can I do to protect my family?
- Should I get my child tested for lead?
- Where can I find more information about lead?

Where does lead come from?

Lead is a serious health hazard, especially for small children who become lead poisoned when they eat, drink or breathe lead. Elevated levels of lead have been found in the drinking water from lead pipes in the City of Flint. Kids can also be exposed to lead from old lead paint, soil, pottery, cosmetics and toys and some home remedies. Adult jobs and hobbies, like auto repair, stained glass, jewelry making and ammunitions handling can also put children at risk if they touch clothing or play in areas where lead is found.

Should my child get a blood lead test?

Children who live in the City of Flint, live in a home using City of Flint water, or who attend school, childcare or often spend time with a caregiver in the City of Flint should be tested for lead poisoning. *This should be done as soon as possible.*

Where should I go to get a blood lead test for my child?

The best place to get your child's blood lead test is your doctor's office. Your pediatrician will follow up with you on lab tests and provide you with information on what to do next. You can also have a lead test at the Genesee County Health Department. If you need transportation, contact 2-1-1 for help.

Understanding your child's lead test result.

A lead level below 5 means there is little or no lead in your child's blood. Use the tips below to help keep your child safe. Your doctor may suggest retesting your child within the next 12 months to make sure the level does not go up.

Draft 5

A lead level of 5-14 means that your child has had some exposure to lead. Work with your doctor and local health department for further guidance on how to limit your lead exposure. Your doctor may retest your child in 1-3 months to make sure the level does not go up.

Children with very high levels of lead **(over 40)** may require treatment at the hospital.

What Can I Do to Keep My Family Safe?

The following steps should be taken right away to help protect you and your child.

Protecting your family from lead in the water:

- Get your water tested for lead. It's free. Call (810) 787-6537 to learn more.
- Use a water filter in your home. Call 2-1-1 for information on free water filters.
- If you do not have a water filter, use bottled water for drinking and mixing formula.
- Use filtered tap water for drinking (including making coffee, drink mixes, juice, baby formula), and cooking (even if you boil the water, the lead will stay in the water and food). Always use cold water when cooking.
- You can use unfiltered tap water for washing your hands, and washing dishes. If using unfiltered water, run the water for at least five minutes before you use it.

Safe cleaning:

Safe Cleaning is important. Keeping your home clean and safe from lead hazards will help to protect your family.

- You can use unfiltered tap water for the following wiping down countertops, mopping floors, and washing clothes.
- Keep children away from lead paint and dust.
- Use wet paper towels to clean up lead dust. Be sure to clean around windows, play areas and floors.
- Wash hands and toys often, using soap and water.

Good nutrition:

Some foods will help keep lead from being stored in a child's body. These are foods with a lot of calcium, iron and vitamin C. These foods include:

Calcium Rich Foods	Iron Rich Foods	Foods with Vitamin C
➢ Milk	➢ Beans	➢ Oranges
➢ Cheese	➢ Lean meats like fish and chicken	➢ Orange juice
➢ Yogurt	➢ Whole grain cereals	➢ Grapefruits
➢ Tofu	➢ Peanut butter	➢ Tomatoes
➢ Spinach		➢ Green peppers

Always

wash your fruits with filtered water. If you are concerned about your child's diet, talk with your pediatrician who may also recommend a daily multivitamin.

WIC and SNAP provide assistance to parents and children who need fresh and healthy foods. Contact the **Genesee County WIC office at (810) 237-4537** to learn more. SNAP also offers a Double Bucks program to purchase even more healthy food for no additional costs.

PROVIDER DRAFT LETTER V.5
October 25, 2015
LoRocco Edits,Travis Edits,Attisha Edits, Peeler, Minicuci Edits
Cross checked with parent letter

Dear Provider:

As you may be aware from recent news reports, elevated levels of lead have been found in lead pipes within the City of Flint's water system.

To help protect the children of Flint from the current lead in water exposure, the Genesee County Health Department and Michigan Department of Health and Human Services are contacting you to assist you in providing guidance to support your families.

Children can be exposed to lead from drinking water in lead pipes, old lead paint, soil, pottery, cosmetics and toys and some home remedies. Adult jobs and hobbies, like auto repair, stained glass and jewelry making, and ammunitions handling can also put children at risk if they touch clothing or play in areas where lead is found.

As a primary care provider, you play a critical role in helping to ensure that children and families exposed to lead receive the care and reassurances they need to manage the potential health impacts of lead poisoning.

Identification. Children suffering from lead poisoning often fail to present outward symptoms. However, early clinical symptoms can include anemia, anorexia, abdominal pain and constipation. Lead is a neuro-toxin, and exposure can result in violent and aggressive behaviors, lead to learning disorders, may cause Attention Deficit Hyperactivity Disorder (ADHD) and has been known to reduce IQ by as many as 5-8 points with levels as low as 10 ug/dL. Lead is metabolized through the gastrointestinal system similar to iron and calcium, with uptake rates depending on the size and weight of the child. The blood half-life of lead is short (approximately 1 month) but the bone half-life can extend into decades.

Due to multiple risk factors facing many residents in the City of Flint (including aging housing conditions and water quality), we recommend that all children under age 6 living in the City of Flint or living in homes that use Flint water, attending school or childcare in Flint, or who spend time with a caregiver in the City of Flint, receive a blood lead test. Blood lead testing should be done through a child's primary care doctor to ensure adequate short-term and long-term follow-up. ***Families should be encouraged to have their children tested immediately either at their doctor's office or the Genesee County Health Department***.

Management of Blood Lead Levels. The following guidance is provided for management of childhood blood lead levels:

- **BLL < 5 ug/dL**
  - A lead level of less than 5 mcg/dL is not typically cause for concern.
  - Provide education and anticipatory guidance to ensure that lead levels do not rise.
  - Consider retesting in 12 months based on risk factors or concerns.
- **BLL >5 ug/dL**
  - **Children with capillary results of 5 ug/dL and higher must have a confirmatory venous blood draw.**
  - Families should receive anticipatory guidance, nutrition counseling, instruction on safe cleaning techniques and appropriate follow-up care from their primary care provider.

draft

PROVIDER DRAFT LETTER V.5
October 25, 2015
LoRocco Edits,Travis Edits,Attisha Edits, Peeler, Minicuci Edits
Cross checked with parent letter

- In-home services including case management and environmental investigations are available for all children with lead levels greater than 5 ug/dL. Refer patients to the Genesee County Health Department for this service.
- Children with confirmed venous testing results greater than 5ug/dL within the past 18 months must be retested based on Medicaid policy and AAP guidelines. (See attached "Provider Quick Reference). If a child has not been retested within these timeframes, retesting is recommended as soon as possible.

- **BLL > 44 ug/dL.**
  - **Children with capillary results of 5 ug/dL and higher must have a confirmatory venous blood draw.**
  - Lead levels over 44 ug/dL may require hospitalization. Consult with an expert at the Children's Hospital of Michigan in Detroit for additional guidance.
  - Families should receive anticipatory guidance, nutrition counseling, instruction on safe cleaning techniques and appropriate follow-up care from their primary care provider.
  - In-home services including case management and environmental investigations are available for all children with lead levels greater than 5 ug/dL. Refer patients to the Genesee County Health Department for this service.
  - Children with confirmed venous testing results greater than 5ug/dL within the past 18 months must be retested based on Medicaid policy and AAP guidelines. (See attached "Provider Quick Reference). If a child has not been retested within these timeframes, retesting is recommended as soon as possible.

Reminder: All children covered by Medicaid must be tested at age 1 and 2.

Follow-up Care. As providers, there are steps you can take to help support your families:

1. Continue to inform and educate families regarding lead risks and preventative steps that they can take to minimize their risks.
2. Encourage your families to use filtered water for drinking, mixing formula and washing dishes. Families can contact 2-1-1 for information on free water filters.
3. Healthy nutrition is critical for lead-exposed children. Make sure your patients are consuming balanced diets high in iron, calcium and Vitamin C. If you have concerns about their nutrition, consider recommending a multivitamin with iron. WIC and SNAP provide assistance to parents and children who need fresh and healthy foods. Contact the Genesee County WIC office at (810) 237-4537 to learn more. In addition, SNAP offers a Double Bucks program that can provide healthy foods for less.
4. Breastfeeding is highly protective and encouraged. However, if the mother's blood lead level rises above 40ug/dL or her level is greater than 20 ug/dL and the baby has a level above 5 ug/dL breastfeeding is not recommended.
5. Because lead is a neuro-toxin, children with lead poisoning need longitudinal follow-up and may require developmental and behavioral health intervention services. Continue monitoring your patients' development at every visit.
6. Consider additional wrap-around and support services that will benefit your patients such as early childhood home visiting programs, early head start and head start. Call 2-1-1 for more information.

Local Resources. Several local resources are available to you and your patients:

- Blood Testing. Patients are encouraged to contact their primary care provider for testing. The Genesee County Health Department also administers lead tests. Patients in need of transportation should contact 2-1-1 for assistance.
- Water Testing. Water testing is free through the City of Flint Water Testing Plant. Patients can call 810-787-6537 to learn more.
- WIC and SNAP provide assistance to parents and children who need fresh and healthy foods. Contact the Genesee County WIC office at (810) 237-4537 to learn more.
- Child Development. If you have concerns about a child's growth, development or learning contact 2-1-1 for a Home Visiting Program in your area.

Heads up, here's the report from the Elementary school we sampled last weekend.
Working with DHHS to coordinate release of blood lead level data with recent water sampling data, including this report. I think this is the format we're going to use for all 13 Flint Schools. It gives the schools folks specific, easy to read info about our findings and what they suggest the school should consider doing.
Call me if you have questions.
Thanks,
b

Freeman Elementary School – Outlet Sampling and Plumbing Assessment Recommendations

Background Information

A plumbing assessment of Freeman Elementary school was completed by Department of Licensing Regulatory Affairs (DLARA) and Department of Environmental Quality (DEQ) staff on Friday October 23, 2015. The plumbing assessment identified 31 outlets where water is used for drinking, cooking, and/or food preparation. From the plumbing assessment, a sampling sequence was developed based on the information available regarding the school's plumbing layout.

Potential sources of lead leaching into drinking water identified in the assessment include:

- Lead solder joints on copper piping
- Brass valves and brass fittings
- Brass components in fixtures
- Galvanized piping

Sampling was completed by DEQ and DLARA staff on Saturday October 24, 2015.

- Sampling was completed following a stagnation period of 12 hours.
- Sampling was conducted in accordance with the sampling protocol dated October 23, 2015. (see attached)
- Sampling followed the sequence based on the assessment that was conducted on Friday, October 23, 2015.

A set of four samples were collected at each outlet.

- Two initial 125 milliliter samples,(P1 and P2)
- A third 125 milliliter sample (F1) following a 30 second flushing period, and
- A fourth 125 milliliter sample (F2) following an additional two minute flushing period.

Water Service Information

A four inch diameter cast iron water service line enters the school in the boiler room on the west wall. Piping in the boiler room immediately transitions into galvanized metal piping for cold water lines. Two separate galvanized cold water supply lines exit the boiler room. One in the northeast corner appears to serve the gym, auditorium, and proposed pre-K facilities on the north end of the school. The other exits the boiler room in the southwest corner and appears to serve the remainder of the school to the south, including the library. This line was also found to have grounding connections attached to the piping. Hot water is distributed in continuous loops that feed from and return to a central water heater in the boiler room. Hot water piping material where exposed was copper piping with 50/50 lead solder joints. Brass valves were seen throughout the building.

Outlets With Lead Levels Greater Than 15 Parts per Billion

Outlet: **Bubbler Drinking Fountain, Left (DW001)**
Location: Hallway outside Janitorial Room
Results: P1=40 parts per billion, P2=6 parts per billion, F1=4 parts per billion, F2=1 part per billion

These results suggest the highest contribution of lead may be from the bubbler itself. This bubbler fixture is believed to have a brass valve. The connection underneath the sink also appears to have some brass components including the valve at the wall.

Replacement of this bubbler tap and its connection plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for 3 minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: **Sink Faucet (CF029)**
Location: DHHS Health Office, west wall
Results: P1=17 parts per billion, P2=12 parts per billion, F1=2 parts per billion, F2= non-detect

These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. The faucet is a Delta 400. This model faucet valve has brass components. This style faucet also has a mixing valve that may allow mixing of hot and cold water. Connecting plumbing in the cabinet under the sink may also contain brass components.

This faucet also has an aerator at the outlet. The aerator should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator should be periodically checked and cleaned.

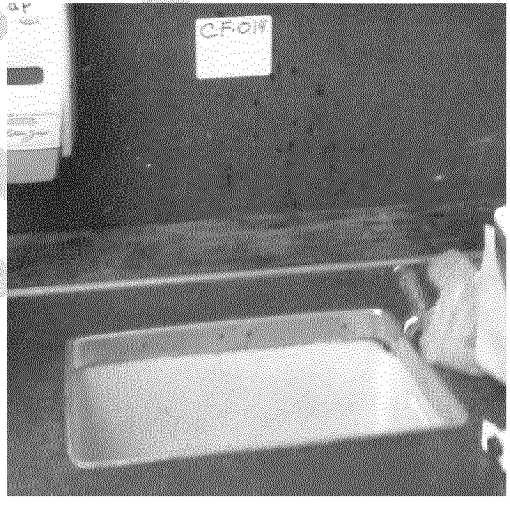
Replacement of this faucet and its connection plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for 3 minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Integrated faucet and bubbler fountain (CF006)
Location: Classroom 2, south wall
Results: P1=16 parts per billion, P2=3 parts per billion, F1=1 part per billion, F2=1 part per billion

These results were collected from the faucet portion of the fixture and suggest the highest contribution of lead may be from the fixture itself. The make and model of this fixture is unknown but appears to be made of chrome plated brass and may be connected on the underside of the sink using a brass nipple.

Replacement of this fixture and its connection plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for 3 minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

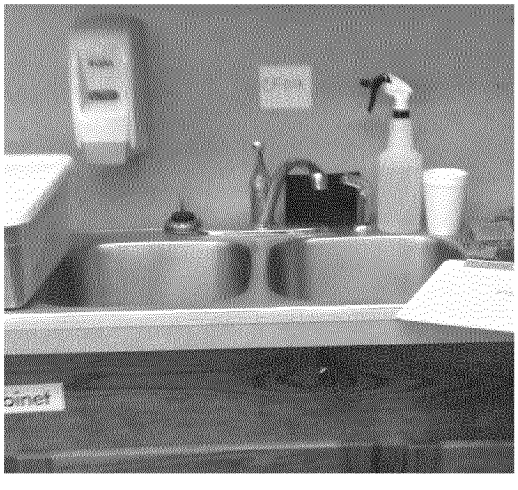
Outlet: Integrated faucet and bubbler fountain (CF014)
Location: Classroom 10, north wall
Results: P1=27 parts per billion, P2=7 parts per billion, F1=4 parts per billion, F2=3 parts per billion



These results were collected from the faucet portion of the fixture and suggest the highest contribution of lead may be from the fixture itself and its connecting plumbing. The make and model of this fixture is unknown but appears to be made of chrome plated brass and may be connected on the underside of the sink using a brass nipple. Connecting plumbing in the cabinet under the sink may also contain brass components.

Replacement of this fixture and its connection plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for 3 minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: Sink Faucet (CF013)
Location: Classroom 10, north wall
Results: P1=9 parts per billion, P2=18 parts per billion, F1=3 parts per billion, F2=3 parts per billion



These results suggest the highest contribution of lead may be from the connecting plumbing with some contribution from the faucet itself. The faucet appears to be a Delta 500 series. This model faucet may have some brass components. This style faucet also has a mixing valve that may allow mixing of hot and cold water. Connecting

DRAFT

plumbing in the cabinet under the sink should be checked for brass components including brass valves.
This faucet also has an aerator at the outlet. The aerator should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator should be periodically checked and cleaned.
Replacement of this faucet and its connection plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for 3 minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

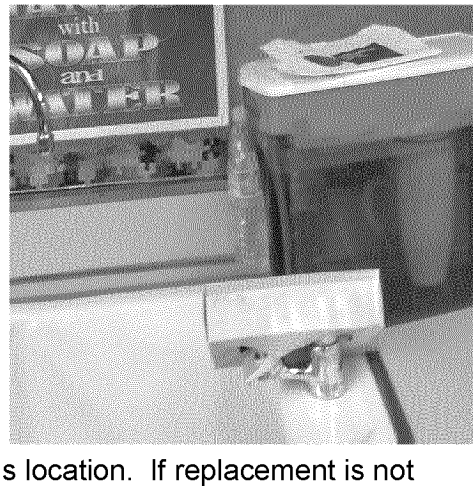
Outlet: **Sink Faucet (CF015)**
Location: Classroom 11, northeast corner
Results: P1=102 parts per billion, P2=326 parts per billion, F1=14 parts per billion, F2=11 parts per billion

These results suggest the highest contribution of lead may be from the connecting plumbing and from the faucet itself. The faucet is an older design that uses a brass tube approximately 8 inches in length between the hot and cold water valves, and connects to the outlet under the sink. This brass tube may be the primary source of lead, explaining the higher second (P2) sample result. The faucet and valves may also contain brass components. Connecting plumbing in the cabinet under the sink should be checked for additional brass components including brass valves.

This faucet also has an aerator at the outlet. The aerator should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator should be periodically checked and cleaned.

Replacement of this faucet and its connection plumbing with lead-free materials will significantly reduce lead exposure at this location and needs to be completed. If replacement is not currently feasible, **DO NOT USE THIS FAUCET.**

Outlet: **Integrated faucet and bubbler fountain (CF024)**
Location: Classroom 19, east wall
Results: P1=23 parts per billion, P2=3 parts per billion, F1=4 part per billion, F2=3 parts per billion



These results were collected from the faucet portion of the fixture and suggest the highest contribution of lead may be from the fixture itself. The make and model of this fixture is unknown but appears to be made of chrome plated brass and may be connected on the underside of the sink using a brass nipple.

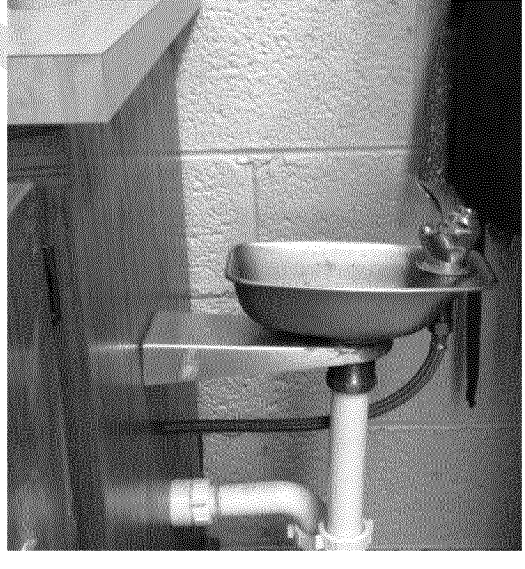
Replacement of this fixture and its connection plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for 3 minute following periods of stagnation is likely to reduce lead concentrations and lead exposure.

Outlet: **Bubbler fountain (CF026)**
Location: Classroom 14, west wall
Results: P1=36 parts per billion, P2=30 parts per billion, F1=17 parts per billion, F2=4 parts per billion

These results suggest the highest contribution of lead may be from the bubbler itself. This bubbler fixture appears to be made of chrome plated brass. This style bubbler typically has a 4-5 inch brass fitting that connects to a 3 inch brass nipple on the underside of the sink. This would explain the higher concentrations in the first two sample results. The connection underneath the sink may also have some brass components and should be checked including the valve.

Replacement of this bubbler tap and its connection plumbing with lead-free materials will significantly reduce lead exposure at this location and should be completed. If replacement is not currently feasible, sample results indicate that flushing this tap for 3 minutes prior to each use and for at least 4 minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure. **In general, use of this fountain for drinking water should be discouraged.**

Outlet: **Bubbler fountain (CF031)**
Location: Proposed Pre-K room, south wall
Results: P1=57 parts per billion, P2=3 parts per billion, F1=2 parts per billion, F2=non-detect



These results suggest the highest contribution of lead may be from the bubbler itself. This bubbler fixture appears to be made of chrome plated brass. This bubbler has a brass fitting connection to a brass nipple. The connector hose is not expected to be contributing lead.

Replacement of this bubbler tap and its connection plumbing with lead-free materials will significantly reduce lead exposure at this location and should be completed. If replacement is not currently feasible, sample results indicate that flushing this tap for 3 minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

DRAFT

Outlets With Lead Levels 15 Parts per Billion or Less

While the remaining 22 outlets showed sample results to be at levels requiring no further action, several recommendations have been identified.

Several of these outlets are comprised of similar materials as the outlets listed above, and could potentially experience higher lead levels under extended periods of stagnation.

This includes:

- Sink Side Bubbler Units in Room 12 (CF022), Room 5 (CF009), Room 21 (CF028), Hallway Fountain (DW002), Room 15 (CF018), Room 17 (CF020), and Room 1 (DW005).

- Integrated Faucet Bubbler Fountain Units in Room 6 (CF010), Room 9 (CF012), Room 4 (CF008), Room 3 (CF007), and Room 7 (CF011)

Replacement of these fixtures with lead-free materials is also recommended.

The fourth sample at each of these 22 outlets following approximately three minutes of use and flushing at a reduced flow reduced lead concentrations to 4 parts per billion or less. This indicates that flushing of all taps used for drinking, cooking, and/or food preparation, for 4 minutes following periods of stagnation will further reduce lead exposure. It is recommended that a flushing operational procedure be developed for use by staff responsible for plumbing operations and maintenance.

PRESS ADVISORY FOR IMMEDIATE RELEASE
Contact: Sam Riddle 313 915 1557

NAN demands Michigan set up special court for lead poisoned juvenile offenders in Flint

(11/2/15 Detroit, MI)- The Michigan National Action Network (NAN) says that the State of Michigan needs to immediately set up a special court in Genesee County to hear the cases of any juvenile offenders that may have been poisoned by lead contaminants in Flint water the juveniles may have consumed.

"The recent handcuffing of a 7-year-old child by Flint police has profound implications beyond the obvious over reaction of the officer," says Sam Riddle state political director of Michigan NAN.

"Criminalization of children only enhances the grade school to prison pipeline. But now that inhumane pipeline may be aided and abetted by behavioral issues caused by lead poisoning that also can be the source for irreversible brain damage," said Riddle.

"All juvenile offenders arrested, charged or incarcerated in Genesee County that may have consumed Flint water during the period of lead contamination should be tested for lead content in their blood.

The State of Michigan should immediately establish a court to hear cases with treatment, counseling and outcomes other than incarceration for behavior the state played a central role in creating with its mishandling of Flint water," concludes Riddle.

Talking points on today's data release
b

Talking Points on Freeman Announcement

Q: How do we describe the home tests?

A: The home tests are a surveillance-level screening tool. It is the same test used by the state to comply with the federal Lead and Copper Rule.

Q: SO, a safe reading doesn't mean my water is safe?

A: A low reading means there are no fixture-related issues. This screening may not catch impacts of a lead service line to the home. If a homeowner isn't sure whether they have a lead service line, the best way for homeowners to be absolutely sure is to have a certified plumber inspect their home.

Q: Does home plumbing inspection mean they dig up my yard?

A: Usually, no. A good plumber can usually assess the service line from the point of entry to the home.

Q: Was the inspection of the schools done with a different kind of testing? If so, how so?

A: Yes, the testing at the schools is a very thorough protocol designed to first determine if there are fixture-specific issues, then look deeper into the system to identify possible lead plumbing issues.

Q: What was learned by the testing at Freeman Elementary?

A: We identified 9 of 31 sites where the plumbing clearly was imparting lead into water. Importantly, we did repeated draws of the water at these spots over several minutes, and saw lead levels drop dramatically. This means the lead is in the fixtures, not in the water lines. It means the fixtures need to be addressed in some way – flushing for several minutes will help, but replacement of these fixtures offers a more permanent solution. And it means the water at Freeman is safe at 22 of the 31 sites inspected, which is of some reassurance to school officials.

Q: The City is now using water from Detroit. When will the water be free from lead again?

A: The water from Detroit is treated with phosphates, which coat the insides of lead home service lines and will reduce lead impacts. The City also will be adding additional phosphates to develop this coating more quickly, but it could take months for corrosion control to be achieved throughout the system. It is important to note that, even in systems where optimal corrosion control exists, lead components in home plumbing can still cause lead exposure. Removing lead from home plumbing is the only permanent solution to address lead in home water supplies. And testing is the best way to get an accurate sense of one's exposure. In Flint, blood testing for children is free, and surveillance testing of water for any resident also is free.

Subject: RE: request for comment on congressman's letter

1. The Governor's 10-point plan for Flint recognizes the need to address lead service lines. We agree with Congressman Kildee and intend to work with the City of Flint, utilizing MI's Revolving Loan Fund program. We appreciate Congressman Kildee getting clarification from EPA that this money can be used for lead service line replacement. In fact, we've been working with Sen. Ananich and other legislative leaders to get these funds available to perform lead service line replacement.

2. The Governor's action plan addresses lead education and lead exposure. We will continue working with the city to educate its citizens and we will be making our lead exposure data available and take actions necessary to minimize risk to Flint residents from lead.

3. We appreciate the partnership between the state and local government to address the switchover to Detroit water. The State of Michigan, with support from the Legislature, provided $6 million in an agreed-upon plan with the City to contribute half of the necessary funding. Of the $6 million local half, it is important to remember the Mott Foundation provided $4 million. We want to recognize and sustain the partnership.

4. We look forward to the congressman's continued leadership to deliver federal resources to this issue.

Subject: request for comment on congressman's letter

Hi Sara:
I've attached a copy of a letter Congressman Kildee sent to Gov. Snyder last week concerning Flint water issues.
I didn't know if there has been a formal reply and/or if you would want to comment on it.
Thanks,

Dennis,

There is some information attached on the Flint water issue you asked us about. I summarize a few of the key points:

- The water system has been running at deficits for years. When the previous EFM left the City in 2004, the water system has a reserve of approximately $60 million. When Mike Brown was appointed, this had turned into a $20 million deficit due to years of not passing along to consumers the rate increases of over 10% hitting the system from DWSD. Slides 5 & 6 of the attached power point show this pretty dramatically.
- Substantial increases over the past few years are an attempt to reflect the actual costs of running the system.
- Another concern raised by DHS was the increase in the deposit for rental properties. This was necessary because renters paid the previous $100 deposit, then racked up water bills in excess of this amount and walked away. Of the affidavits currently out there, 82% are past due. I would also note that this is not mandatory, it is only required if a landlord is not willing to put the water bill in their name.
- The bottom line is that they realize it is an issue, but the General Fund doesn't have the money to run general City operations, much less subsidize water rates.

The two page word document (attached) provided by the EFM gives you a good overview of what is going on. They believe that a switch to KWA is part of the solution for high water rates in the City.

City Of Flint Water History Facts

Current Treatment Plant was put into service in 1954.

Current 72" main pipeline was completed in 1970.

Flint signed a 30 year contract with Detroit Water and Sewer Department in the mid 1960's.

The contract with DWSD has expired and we are currently operating on a yearly extension.

In 2006 Flint completed a $48,000,000 upgrade of the existing Water Plant (required by the MDEQ & for backup only).

Flint's Water & Sewer System is approximately a $300,000,000 Enterprise.

Flint's Water & Sewer System is designed to deliver water to over 200,000 people with over 1,500 miles of infrastructure.

Flint's most recent census count shows a population of approximately 102,000 in 2010.

Flint's census population in 2000 was approximately 124,000.

The water system had over 45,000 customers in June of 1999.

The water system had just over 36,000 customers by June 2011.

The "Fixed Costs" that must be covered to maintain the system and deliver quality water have increased over time.

CITY OF FLINT
WATER NON-PAYMENT TURN-OFF POLICY

1. Water services to any customer may be shut off if the account is not paid until after 30 days after the due date. (City ordinance 46-52 (h))

2. Non-payment turn-offs are done only Monday through Thursday. The Customer Service Center does not schedule non-payment turn-offs on Fridays, Saturdays, Sundays, or most recognized holidays.

3. Illegal usage, broken payment arrangements and NSF (non-sufficient funds) turn-offs are done at any time without additional notice.

4. Turn-off notices are mailed to delinquent customers fifteen (15) days before actual turn-off.

5. The water customer is responsible for maintenance of all plumbing in the premises including connection to City water mains or sewer lines.

6. If a customer disputes a water bill and is unable to resolve the issue with Customer Service personnel, the customer may request an administrative review. Further information on any water account may be obtained by calling (810) 766-7015 or visiting the Customer Service Center at 1st Floor, City Hall, 1101 S. Saginaw St.

Preliminary Options for Future City of Flint Water Sources

Consider a New Negotiated Contract with Detroit Water and Sewer Department

PRO'S	CON'S
No upfront capital costs	Lack of control over new / fixed changes
Possibility to negotiate a lower rate	Past practices
Ability to "Blend" water sources to further control costs	

Consider a Contract with the Karegnondi Water Authority

PRO'S	CON'S
Voting member of KWA board	Capital cost (debt service)
Ability to "Blend" water sources to further control costs	Uncertainty of final costs
Raw water is an asset for attracting new buisnesses	

Blended Use of the Flint River

PRO'S	CON'S
Helps control cost of water	

*** CURRENTLY NO DECISIONS HAVE BEEN MADE REGARDING THE FUTURE WATER SOURCE

Improvements for City of Flint Water System

Reduce Leakage

- **Finalize a Preventative Maintenance Plan**
  - (Planning started in January 2012, requires funding, … part of Operational Costs)
  - Will help identify repair area's

- **Reduce water theft**

- **Replace water meters**
  - We currently have an eighteen month plan to replace all meters with more efficient "*Smart Meters*"

- **Encourage routine household checks**
  - "Faulty" toilets are a significant reason for household water loss. and unexpected larger bills.

Other Leakage concerns

✓Transmission Loss

✓Fire Hydrants

✓Incorrect water bills

✓Non-Payment

Response to Treasury regarding water rates, etc.

The cost of water and sewer in the City of Flint has become one of the most vexing issues facing the Emergency Financial Manager. When the Emergency Manager was appointed in December 2011 the water system had a $20 million deficit. In order to address this deficit the EM was forced to increase water and sewer rates by over a combined 120% in the past 18 months.

When the previous EFM left the City in 2004, the water system has a reserve of approximately $60 million. In the intervening years several things occurred: for three of five years (2007-2011) no rate increases were passed along to customers even though Detroit charged increases of over 10% per year; in the years when increases were passed along those amounts did not equal the actual cost of the system; the City chose to use the equity built up in the Water and Sewer funds until that was no longer available; a large lawsuit was settled; the City must pay for the $48 million MDEQ upgrades required at the Water Treatment Plant; and unbilled or unpaid water and sewer charges increased significantly.

In the past 18 months water and sewer rates have been increased to reflect the actual costs to operate the water and sewer system. Major leaks in the distribution system have been repaired. Unpaid water and sewer usage is now being addressed and the water affidavit process is part of this problem.

The City of Flint currently allows landlords to put the water and sewer billing in the name of the renter. This affidavit process holds the landlord harmless for any water costs. The deposit for the affidavit has been set at $100, which is the lowest in the County. The deposit fees in the County range from a low of $100 to a high of $500. The City is raising its rate to $350, which puts us about in the middle of the range. Depending on usage, this will cover 60 to 90 days' water charges and reduce the amount of uncollected billing. Keep in mind, any water not paid for is eventually charged to those who do pay through increased rates.

Because the deposit is so low in relation to the current charges, renters quickly owe more than the deposit, and find it easier to simply walk away from the rental and forfeit the deposit. This results in the City being on the hook for the unpaid bills. Currently there are 4,893 affidavits, and 4029 of them (82%) past due. This facctor alone totals to just under $3 million. In addition, when the renter walks away, the City has no way of knowing that the property is vacant. Many times the landlord rents the property again, without filing an affidavit, and the water continues to be charged to the former renter, again adding uncollected bills to the City. In the past the collection rate for past due accounts, when turned over to a collection agency, has been about 3% on average. Keep in mind that this is a deposit, not a fee, and can be refunded when the renter leaves the property. Also, the landlord can avoid the renter's deposit requirement by keeping the water and sewer billing in his name.

The City is also studying the potential to hold the landlord accountable for the water charges under certain conditions, such as failure to notify the City when a renter leaves and then renting the property again without filiing a new affidavit.

The City recognizes that the high cost of water is a factor which is causing low income residents to choose to leave the City and the increase in the deposit fee might accelerate that choice. However, many of the surrounding communities charge a higher deposit than does the City o Flint. Renters are leaving the City because they can get better housing for less money, live in safer neighborhoods with better schools, have their water charges decrease by about half, and have their insurance rates reduced by approximately 50%.

Water and sewer costs have resulted in about 8,000 current customers to be more than 60 days past due. Many are senior citizens who have lived in Flint their entire life, paid their taxes, etc. and now find themselves unable to pay their water bill. This concerns the City more than the issue of deposits. We have put in place for this year the ability for citizens to direct a part of their city tax refund to help people with their water bills, and we are reviewing other options as well as scheduled meetings with agencies involved in helping low income people with their bills.

We further recognize that we have staffing issues and water theft to address. The City is able to complete about 120 water shut-offs per week. At that rate we can not keep up with delinquent account shut-offs. The city also reconginzes that water theft through meter by-pass or unauthorized turn-on must be resolved.

Ultimately, the City must find a way to hold down future increases in the cost of water, to bring them more in line with the Genesee County water customers. To this end the City has recommended to Treasury, that the City leave the Detroit Water System and join KWA with Genesee County, Lapeer and Sanilac Counties and the City of Lapeer. We believe this is the most significant long term factor in stabilizing costs to the water customers in the City of Flint.

Governor and Dennis,

Attached is the recommendation from the engineers we hired to advise us on the KWA project for Genesee/Flint. As you will see, they are recommending that Flint stay with DWSD. This has ramifications that merit further discussion. Dennis and Brom, can you schedule a mtg for follow up?

Thanks,

Andy

STATE OF MICHIGAN CONTRACT NO. 271N3200089

CITY OF FLINT WATER SUPPLY ASSESSMENT

At the request of the Treasurer, Tucker, Young, Jackson, Tull, Inc. (TYJT) makes the following recommendation to the Department of Treasury concerning Flint's water supply alternatives. Based on the financial analysis performed of the various options presented by DWSD to continue treated water service to Flint compared to Flint being supplied by the new KWA untreated water system, TYJT believes that several of the options presented by DWSD are lower in cost currently and over the long run than the one offered by KWA. TYJT also believes that DWSD's most recent offer (subsequent to the submittal of our report) to build a smaller parallel water main from Imlay to Flint, funded by the entire DWSD base of customers, is the best solution offering the least cost alternative and the required redundancy by MDEQ.

Furthermore, since a majority of the KWA system has not been designed and none of the system has been constructed, there is an additional risk that the cost of the KWA system may actually be higher than estimated due to potential construction delays and unforeseen conditions. This risk to Flint could be substantial since the city is responsible for 30 percent of the KWA design and construction costs while still having to purchase water from DWSD during the construction period.

Finally, there are other issues that were identified in our report that may result in risks to Flint if it were to join KWA that should be considered by the Treasury in determining how Flint's potable water should be supplied. These issues are related to redundancy and reliability, other items affecting cost, and Flint's desire to control its own destiny related to its water supply. These are described further below.

- DWSD's supply to Flint is via a 72-inch water main from Imlay City. This main also supplies Imlay City, Mayfield and the Greater Lapeer County Utilities Authority (GLCUA). The volume of water contained within the 72-inch main is approximately 30 million gallons. If Genesee and Flint move to KWA then the three remaining communities' consumption would most likely not be large enough to maintain fresh water in DWSD's pipeline (due to loss of chlorine residual). DWSD may consider shutting down the 72-inch line completely due to the water quality concerns, which would then create an additional burden for Imlay, Mayfield and GLCUA to finance treated water supplies.
- The KWA supply option is counter to the Treasury's Competitive Grant Assistance Program (Formerly EVIP Grant). This program has been put in place to allow for communities to consolidate their services and save money. Two existing customers of DWSD (Flint and Genesee County) along with the potential of others customers (GLCUA, Mayfield, Imlay City) separating from another water system is in contradiction to the program.
- There is a concern over the ability of smaller systems (KWA) over larger systems (DWSD) to pay for future unfunded mandates and regulations. Obviously, identifying regulation requirements over 30 years is hard to determine. However, it is widely accepted that a large system has greater ability to respond to unfunded mandates because the cost can be distributed over a large customer base.
- Although Flint will be responsible for 30 percent of the construction cost, they will only have a minority vote on the KWA board. Furthermore, there are other communities (Lapeer County, the City of Lapeer, and Sanilac County) that sit on the board and vote. However, they are not purchasing water nor contributing to the construction costs. Their position on the KWA Board will not provide them an ability to "control their own destiny," as they have stated to the Treasury.

> Flint City Council approves resolution to buy water from Karegnondi, state approval still needed
> By Dominic Adams | dadams5@mlive.com
> on March 25, 2013 at 10:45 PM, updated March 26, 2013 at 1:28 AM
> FLINT, MI – Flint is one step closer to getting its water from Lake Huron as part of the Karegnondi Water Authority.
> The vote, approved 7-1 at the Flint City Council meeting Monday, March 25, may have set in motion the end to Flint paying to get its water from Detroit.
> Under the proposal, Flint would get 16 million gallons per day of raw water from Lake Huron, pipe it to Flint for treatment and then sell it to customers throughout the city. Another 2 million gallons per day would come from the Flint River and will be treated in Flint.
> Mayor Dayne Walling said the Department of Environmental Quality must approve Flint's getting 2 million gallons per day from the Flint River.
> Tuesday's meeting followed weeks of discussions and special meetings surrounding the resolution.
> "We got there," Councilman Joshua Freeman said. "That's the important thing."
> There were more than 50 people at Monday's meeting.
> "Going with Karegnondi is the best decision. We have no opinion on the economics of the decision," said Rebecca Fedewa, Flint River Watershed Coalition executive director. "If we start drawing water out of the Flint River, we are at risk of having to start releasing water from our reservoirs."
> Genesee County Drain Commissioner Jeff Wright said the decision must still be approved by a county water and waste advisory board. The KWA board will then be reconvened for final approval.
> Wright said construction could start in May.
> State treasury officials still must approve the city council's move because Flint has an emergency financial manager. All expenditures over $50,000 must be approved.
> Genesee County Drain Commissioner Jeff Wright has said that Flint would pay roughly $6.4 million annually for water service if it joined the pipeline – a nearly $4 million savings on what it pays Detroit for water.
> Walling previously said the city would save $19 million over eight years by getting water from the KWA.

"It's a historic night in the City of Flint," Walling said. "The savings will be less with the capacity level approved by city council because there will be increased treatment cost for the river water."

He said the DEQ told the city it needed to get 18 million gallons per day or there would have to be additional work done at Flint's water plant.

Flint's water plant and the Flint River is currently the backup for Flint and Genesee County, however, the plant only operates four times per year.

Councilman Bryant Nolden was the lone dissenting vote.

"It was a protest vote," Nolden said. "I knew they had enough votes. I just feel like the Flint River is our best option."

Karengnondi is the regional water authority that includes Genesee, Lapeer and Sanilac counties and the cities of Flint and Lapeer.

Flint is the second municipality, behind Genesee County, to officially decide to purchase raw water through the KWA. Lapeer city officials said they intend to purchase water, but an agreement has been finalized.

Governor, based upon today's presentations to the DEQ by the City of Flint, KWA and the engineering firm (Tucker Young) Treasury hired to vet the options as to whether Flint should stay with DWSD or join KWA, I am recommending we support the City of Flint's decision to join KWA. The City's EM, Mayor and City Council all support this decision. Dan Wyant likewise concurs and will confirm via email.

We have a briefing call tomorrow morning with Dennis and John to provide more background as to why we reached this conclusion. Flint's EM wants to sign the resolution asap as the project is moving forward with or without them and their participation affects the design and the construction season is upon them.

I assume DWSD will make a last ditch effort to save the customer but I will not advise them of my recommendation until we brief Dennis and John.

Regards,

Andy

Both Dan and Andy believe that the discussions held in the past with DWSD and Flint have been contentious and not fruitful. What we are going to do is tell Flint that if they believe it is in Flint's interest they should sign and submit to Andy for his approval. Brom will tell them that. At the same time we will inform DWSD that this is happening and if they want to make a last attempt they should do so during the period of time that Andy is deliberating on his counter signature. Dan does not believe that DWSD has been straight and doesn't think they will offer anything and Andy concurs. Under any circumstances Flint will have to deal with DWSD on the present delivery system and that may create some negotiations but it's doubtful they will be significant.

We will encourage DWSD to make an attempt. We did call them together as recently as November to negotiate and those discussions were not successful. Andy and Dan will make one last effort.

We grilled them on that quite a bit. There is a maximum guaranteed price on key construction items and the path allegedly presents limited risk- rural, thru areas w no gas or water lines, existing easements etc. I was the skeptic but view of my staff and deq was universal in favor of kwa. I was won over as well. I can't make a legitimate case that financially this is worse for Flint unless today's threat from Shank (DWSD will bill Flint for past capex) is real. We are sorting thru that.

I see lots of political downside as well. Community is invested in this.

Flint Water Distribution Comm Plan and Talking Points

4/11/13

Flint Emergency Manager Ed Kurtz submitted a resolution to Treasurer Dillon on Friday, March 29th, seeking approval for Flint to join the Karegnondi Water Authority (KWA) to secure potable water for the City of Flint. The move to join KWA would remove Flint as a customer of Detroit Water and Sewer Department (DWSD). Treasurer Dillon was required to approve the resolution by EM Ed Kurtz per PA 436, because it was an expenditure over $50,000

Communication Plan

Thursday, April 11, 2013

- **9:00 a.m.** Send official notification of approval to EM Ed Kurtz (Brom Stibitz/Amy Hichez)
- **10:00 a.m.** Call Flint Mayor and Council President (Andy Dillon)
- **10:30 a.m.** Call DWSD to notify of decision (Andy Dillon/Brom Stibitz)
- **10:30 a.m.** Contact Flint media (Terry Stanton/Caleb Buhs)
    - Ron Fonger, MLive; WNEM; WJRT; WEYI

Topline Messages

- This is a decision made by the City of Flint and is a local decision that affects their local water supply.
- After thorough review and analysis, Treasurer Dillon approved the resolution for Flint to join the KWA.
- Flint Emergency Manager Ed Kurtz has worked closely the city's elected officials throughout the decision-making process and all agree that this is best for the citizens and businesses in Flint.
- This is a good example of an EM and city officials collaborating to determine the best course of action for the city's future.
- The Departments of Treasury and Environmental Quality have approved the financial and environmental soundness of KWA's plan.
- Flint accounts for only 2% of DWSD's capacity.
- With continued efficiency improvements and ongoing administrative restructuring, DWSD will be suited to handle the loss of customers.

Background

- This move will allow Flint to control future water rates for Flint residents.
- This will save Flint at least $100 million over the next 25 years, and possibly as much as $300 million.

DRAFT

- Genesee County planned to build pipeline whether Flint was part of the project or not. The removal of the county from DWSD accounts for 4% of their capacity.
- Collaboration between the City of Flint and Genesee County could signify the start of a better relationship and could lead to future collaborative endeavors.

Importance: High

All—

Please see below from Egan. This is essentially the same "?" Nancy Kaffer asked of Jeremy a couple weeks back. Intend to say something along the lines of the following...please advise.

The Tucker-Young report offered an initial perspective on the situation, but as additional information was received and considered by the city, city officials determined that KWA offered the best long-term solution for Flint. As has been noted previously, all involved, the mayor and city council, believed the move to KWA was appropriate and supported the move.

As we have discussed previously, consideration of the development of a Flint-area/Genesee County water system had been on-going since the early 2000's and the City of Flint had been in discussions about joining a new system for much of that time.

Subject: Flint water

Terry attached is the City of Flint Water Supply Assessment, a February 2013 study commissioned by the state treasurer and carried out by Tucker, Young, Jackson, Tull Inc.
Why did the state and city opt to split with DWSD and go with KWA when this study found it would be more costly to do so?

(From p. 17) "Based on the analysis, it is prudent to assume the KWA water supply option costs would be somewhere between the KWA-1 and KWA-2 options. Therefore, the analysis indicates that the two DWSD options of supplying 8 MGD on a maximum day and up to 8 MGD on average are the least cost options for Flint. These options allow Flint to maximize the use of existing assets; the City of Flint's (the Flint WTP) and DWSD's (the existing 72-inch main)."

1. INTRODUCTION

Tucker, Young, Jackson, Tull, Inc. (TYJT), at the request of the State Treasurer performed an analysis of the water supply options being considered by the City of Flint. The City of Flint is presently supplied potable water from the Detroit Water and Sewerage Department (DWSD). This supply is from a single 72-inch water main that terminates at a master meter located at Potter and Baxter. Additionally, downstream of the DWSD master meter, Flint supplies its customer Genesee County. The City of Flint also operates a water treatment plant that uses the Flint River as its source of supply to provide back up and redundancy to the DWSD supply as required by MDEQ

The Karegnondi Water Authority (KWA) is planning on constructing a raw water supply system that could provide Lake Huron water to the Flint Water Treatment Plant. Flint's existing plant would be upgraded to treat the new raw water source.

The State Treasurer has appointed an emergency financial manager for the City of Flint. As such the Treasurer has requested TYJT to provide an analysis of the water supply options to assist the Treasurer in determining any potential risk and the best course going forward for supplying potable water to the City of Flint.

Report Organization

The following sections of this report are described below:

Section 2 – The basis of the analysis is described in this section. The options include the KWA option and several options offered by DWSD.

Section 3 – A significant amount of information and data was collected including memorandums, reports, drawings, financial reports, and other documents. This section summarizes the information used in the analysis.

Section 4 – This section describes the evaluation of the cost of supply for the Flint options. The costs are comprised of the initial cost of operations plus the annual rate of escalation/inflation.

Section 5 – The evaluation process used to analyze the construction costs associated with the KWA supply system is described in this section. Additionally, the cost of financing the capital requirements is described.

Section 6 – This section presents the financial review of the options considered to supply potable water to Flint. A summary of these options is also provided.

Section 7 – In addition to the financial analysis other considerations were identified that should be considered in understanding the risks and determining the best option to supply Flint. They include items related to cost, redundancy and reliability, and Flint's ability to control their future cost of water supply.

2. FLINT WATER SUPPLY OPTIONS

Two water purveyor options were evaluated; the KWA water supply system and continued supply from DWSD. Both suppliers would provide water from Lake Huron as the source. The KWA system is a raw water supply, which means that the water would have to be treated by Flint before distributing the potable water to its customers. The DWSD supply is potable or "finished" water and would not need additional treatment.

Additionally, an option for the Flint WTP to supply the City of Flint without being supplied from either DWSD or KWA was initially considered. The preliminary investigation evaluated the cost associated with the required improvements to the plant and to the Flint River dam system. Although it appeared that this was a viable option, Flint in a meeting on December 20, 2012 with the Treasury, stated that the City did not want to pursue the option and it is no longer being considered.

Karegnondi Water Authority (KWA) Lake Huron Water Supply

The KWA water supply system schematic is shown in Figure 2-1. The system is comprised of an intake in Lake Huron that supplies water to the Lake Huron Pump Station (LHPS). The LHPS lifts the water and pumps it through an approximately 22 mile long 60-inch pipeline. The pipeline terminates at a 5 MG reservoir and is then pumped from the Intermediate Pump Station (IPS) through approximately 26 miles of 60-inch and 18 miles of 30-inch pipeline to the existing Flint WTP. Downstream of the IPS, approximately half way to the Flint WTP, the 60-inch line would also supply a new Genesee County WTP.

The raw water transmission system has a 60 MGD capacity and is sized to deliver a maximum of 18 MGD to the Flint WTP with an average day supply of 12 MGD. Improvements at the Flint WTP would also be required to treat the lake water as the plant is currently designed to treat the Flint River water.

The term of the KWA contract for Flint is 40 years.

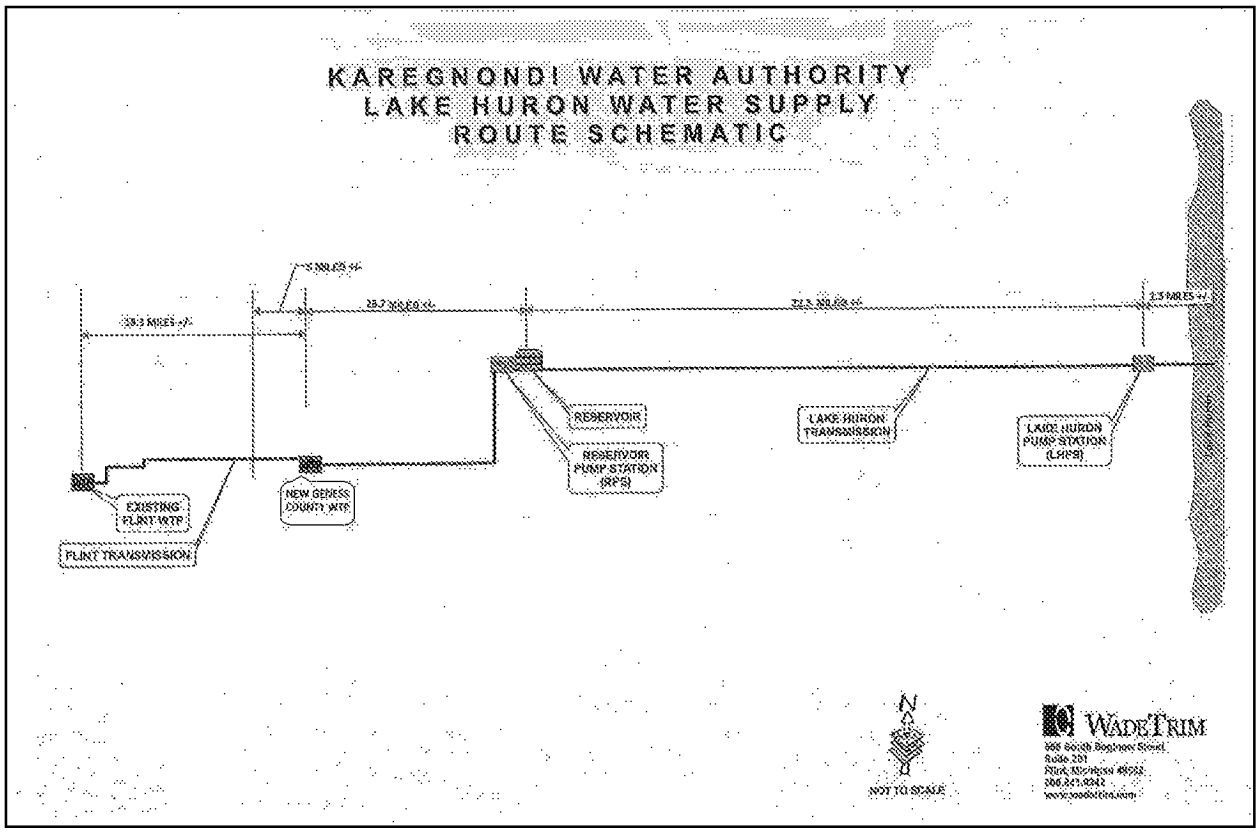

Figure 2-1: KWA Raw Water System

DWSD Water System

The DWSD system schematic is shown in Figure 2-2. Flint is currently supplied by DWSD at Master Meter FL-1, located at Potter and Baxter. Flint typically gets its water from the Lake Huron WTP, located in Fort Gratiot, Michigan; near the Lake Huron shoreline. Water is treated and pumped at the Lake Huron WTP and supplied through a 120-inch pipeline to an intermediate pump station called the Imlay Pump Station. The Imlay Pump Station has 20 MG of reservoir capacity. Depending on the time of year and the DWSD system demand, water is either bypassed directly to Flint or it is re-pumped at Imlay. It should be noted that the DWSD supply to Flint is part of a very large water system and during emergencies or outages water can be supplied from the south up to Flint in lieu of the Lake Huron facility.

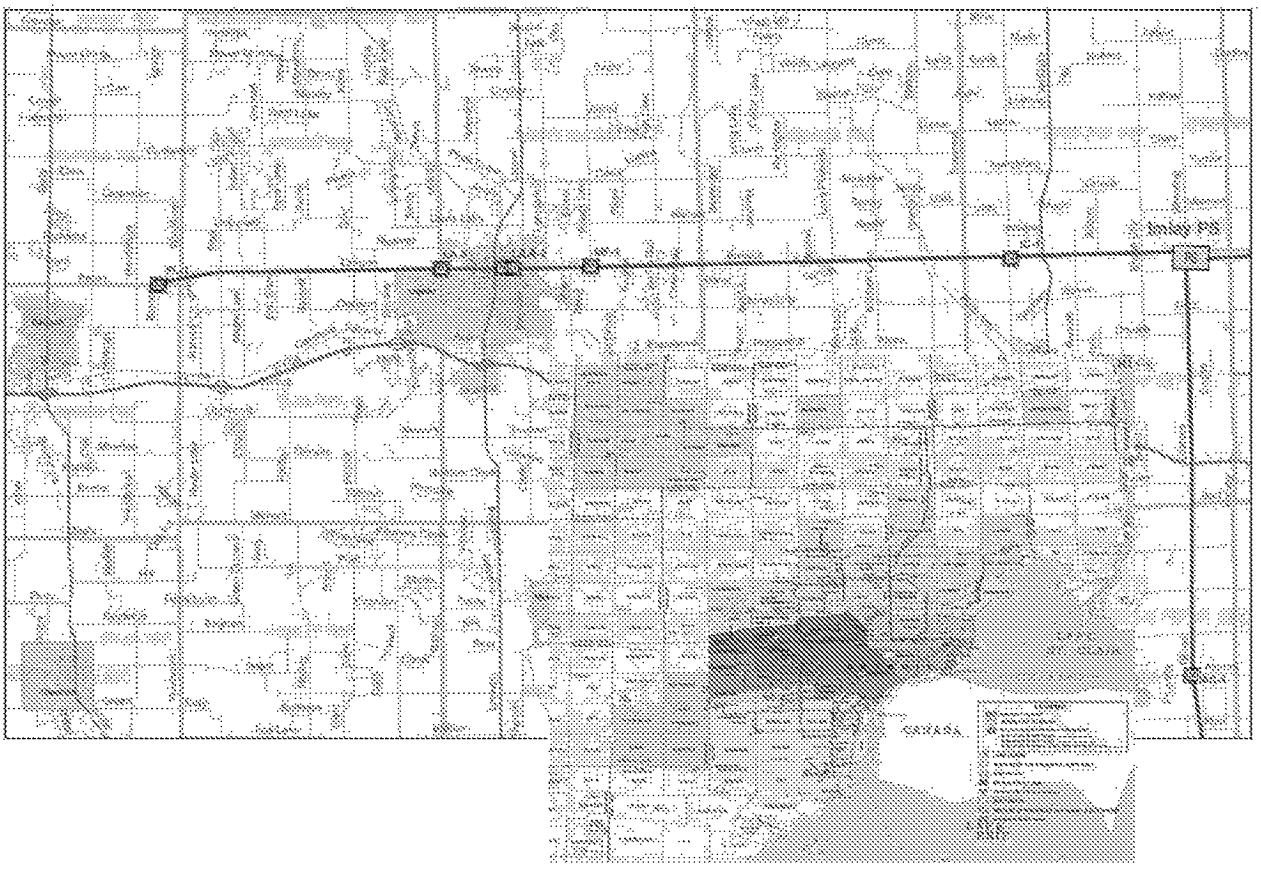

Figure 2-2: DWSD Water System

The pipeline from Imlay to FL-1 is a 72-inch pipeline. It has been estimated that the 72-inch line serving Flint has a capacity in excess of 90 MGD.

DWSD has presented several contractual options to Flint and all of them are based on Flint signing a new 30 year contract. The options shown in Table 2-1 are based on two different supply points; one at the current master meter location FL-1 at Potter and Baxter (P&B) and the other at the location of the Imlay Pump Station. The reason for the varying options is to provide a lower water rate at the Imlay Station, since the DWSD rate formula is based on distance and elevation factors related to the supply location.

The rates are also dependent on the maximum amount of water DWSD supplies. As example, if DWSD supplies a maximum day demand of 18 MGD that would equal the entire amount of water required by Flint.

For the options less than the maximum of 18 MGD means that the Flint WTP would supplement the difference by supplying water treated from the Flint River. These options are known as "blending" and would allow for Flint to blend two sources of water to supply its customers; the Flint River using the Flint WTP and Lake Huron from DWSD system.

Description	Average Day Demand
18 MGD Maximum Day Customer – FL-1	12 MGD
12 MGD Maximum Day Customer – FL-1	8 MGD
8 MGD Maximum Day Customer – FL-1	8 MGD
12 MGD Maximum Day Customer - Imlay	12 MGD
8 MGD Maximum Day Customer - Imlay	12 MGD

Table 2-1: DWSD Supply Options

3. DATA COLLECTION

During the course of the investigation several documents were used to perform the analysis. The names of the documents are listed below for reference.

KWA and Flint

- Preliminary Engineering Report, Lake Huron Water Supply Karegnondi Water Authority, September 2009;
- Analysis of the Flint River as a Permanent Water Supply for the City of Flint, July 2011;
- Cost Comparison, KWA vs. DWSD, Letter to Mr. Kurtz, October 31, 2012;
- Lake Huron Supply Study, KWA, Appendix 20, October 2012 Preliminary Report Update, Final Report (DRAFT), October 4, 2012;
- Articles of Incorporation of Karegnondi Water Authority, endorsed in 2010;
- Karegnondi Water Authority Bylaws, October 26, 2010;
- KWA Raw Water Supply Contract;
- Flint WTP Statement of Revenues and Expenditures 09' – 12';
- GCDC Division of Water and Waste Services Financial Statements 03' – 11'; and
- Assorted emails with further clarification of questions and documentation.

DWSD

- Historical Rates and Charges to Flint 04' – 13';
- Historical Rates and Charges to Flint with Hypothetical Model Contract 10' – 13';
- 2013 Rates and Charges for the following options:
  - 18 MGD Maximum Day Customer at FL-1;
  - 12 MGD Maximum Day Customer at FL-1 (Flint blending*);
  - 8 MGD Maximum Day Customer at FL-1 (Flint blending*);
  - 12 MGD Maximum Day Customer at Imlay (Flint blending*);
  - 8 MGD Maximum Day Customer at Imlay (Flint blending*); and
- Assorted emails with further clarification of questions and documentation.

* Flint blending based on DWSD supplying two-thirds and Flint one-third of 12 MGD average day demand.

Two meetings were also held; one with DWSD and one with Flint and Genesee County representing KWA. The meetings were held on November 19, 2012 and November 20, 2012, respectively. Minutes from these meetings are included in Appendix A.

4. COST OF SERVICE

Information provided by DWSD, Flint, and representatives of the KWA were used in the cost of service evaluation. To evaluate the annual escalation/inflation rate over the planning period, the rate adjustment for DWSD was estimated based on the recent rate adjustment history. For the KWA system both the estimated cost of operations when the system begins supplying water and the annual rate adjustment or inflation was evaluated. The existing cost of operations and escalation for the Flint WTP was based on actual costs provided and then adjusted depending on the scenario considered. This section describes the evaluation process and the rates used in the analysis.

DWSD Water Supply

The City of Flint has been a customer of DWSD since 1967. The Flint WTP has been maintained as a backup to the DWSD system. As indicated previously, several options were provided by DWSD depending on the type of service Flint was to select. The unit cost of water for each of these options is shown in Table 4-1. These rates are based on DWSD's FY13, which are current until July 2013.

Description	Average Day Demand (MGD)	Unit Rate ($/MG)
18 MGD Maximum Day Customer – FL-1	12	16.37
12 MGD Maximum Day Customer – FL-1	8	16.31
8 MGD Maximum Day Customer – FL-1	8	12.68
12 MGD Maximum Day Customer - Imlay	12	14.38
8 MGD Maximum Day Customer - Imlay	12	11.11

Table 4-1: Cost of DWSD Supply Options

To determine annual escalation rate, DWSD's last 10 years of history was used along with other large urban water systems in Michigan. The water systems used for benchmarking comparison were: Lansing, Grand Rapids, and Saginaw.

Table 4-2 identifies the annual and average rate of increase to Flint based on supplying water either to the current FL-1 at Potter and Baxter or Imlay. Note the last three years of the rates (FY 2011 through FY 2013) assumes that Flint's cost would be based on the new 30 year contract; FY 2011 being the first year that the new contract was available.

Fiscal Year	Average Unit Cost ($/MCF)	Annual Change (%)
2004	11.06	
2005	10.24	-7.4
2006	10.56	3.1
2007	11.09	5.0
2008	11.35	2.3
2009	13.07	15.2
2010	11.73	-10.3
2011	13.89	18.4
2012	15.08	8.6
2013	16.24	7.7
Average		2.4%

From FL-1

Fiscal Year	Average Unit Cost ($/MCF)	Annual Change (%)
2004	11.06	
2005	10.24	-7.4
2006	10.56	3.1
2007	11.09	5.0
2008	11.35	2.3
2009	13.07	15.2
2010	11.16	-14.6
2011	12.23	9.6
2012	13.28	8.6
2013	14.32	7.8
Average		2.9%

From Imlay

Table 4-2: Recent DWSD Water Rates

Audited financial reports were used to determine the rate of inflation associated with other three large municipal systems. The results are shown in Table 4-3.

Water Systems	Years Evaluated	Average Rate (%)
Lansing	05'-12'	4.6
Grand Rapids	04'-11'	1.6
Saginaw	04'-11'	7.0

Table 4-3: O&M Inflation Rates of Other Large Water Systems

Based on the information analyzed from DWSD and the other communities, it was determined that a fair annual rate of inflation for operations and maintenance cost for the analysis should be 4.4%. The 4.4% has historical significance from Flint's current water supplier and falls within the range of the other communities.

KWA Water Supply

The initial projected O&M cost for the KWA supply would be comprised of KWA's O&M costs as well as Flint's O&M costs. Because there was limited information provided, the initial estimated rate of $1.50/MCF was used. This rate is based on information from the cost comparison analysis attached to the letter to Mr. Kurtz, dated October 31, 2012.

The KWA cost evaluation used an annual O&M inflation rate of 5%. To validate this rate a similar analysis to DWSD's operations and maintenance annual rate of inflation was used. First, in discussions with Flint and the Genesee County Drain Commission (GCDC), they believed that the annual rate of inflation for the new KWA system would be similar to the GCDC Water & Waste Services (WWS). Additionally, two large transmission systems were used to benchmark the inflation rates: the Southeastern Oakland County Water Authority (SOCWA) and the Ypsilanti Utility Community Authority (YUCA). Although both of these systems transmit finished water opposed to raw water, they were considered similar enough for comparison as they are comprised of only large water mains, pumping facilities and storage.

Once again audited financial statements were used to calculate the inflation rates. A summary of the findings are shown in Table 4-4. Based on the fact that the information analyzed showed a large difference between the two systems, it was determined that the KWA assumption of 5% was a good rate of inflation to use in the financial analysis. This rate is almost equally between the GCDC rate and the other two transmission systems.

Systems	Years Evaluated	Average Rate (%)
GCDC WWS	03' – 11'	10.5
SOCWA	04'-12'	--
YUCA	04'-12'	0.7

Table 4-4: O&M Inflation Rates of Other Comparable Systems to KWA

Flint WTP

The Flint WTP currently serves as a backup supply to the DWSD service to Flint. To maintain backup operations, the City of Flint operates the plant approximately 20 days each year. Flint indicated that the average production rate when they operate is 11 MGD.

For the blending options and the KWA supply considered, Flint would be required to operate its plant all year around. Therefore, their operating and maintenance costs were evaluated and adjusted to determine an annual cost associated with year-round operations.

The Flint WTP provided three years of operating costs for the assessment. Additionally, reports listed in Section 3 were also used as reference to determine both operating costs for the plant processing Flint River water (blending options) and Lake Huron raw water (KWA option).

Major cost centers were analyzed to estimate annual operation and maintenance. They included: labor, utilities, chemicals and residual management. In general, as recommended by the Flint plant staff, labor and overhead were increased from the current costs by two-thirds. Additionally, variable costs for power, chemicals and residual cost were increased to estimate full time treatment at the Flint WTP. Data from the KWA Preliminary Report and annual operating data for the Flint WTP (provided separately) were analyzed to make these forecasts.

The annual operating and maintenance costs developed for Flint WTP used are shown in Table 4-5.

Source of Supply	Average Daily Production (MGD)	Estimated Annual O&M Cost
Flint River (Blending with DWSD)	4	$5,895,097
Lake Huron (Supplied by KWA)	12	$7,913,118

Table 4-5: FY 13 O&M Costs for Year-round Operations

It was determined that a fair annual rate of inflation for operations and maintenance cost for the Flint WTP plant should be 4.51%. The 4.51% is an average of Lansing, Grand Rapids and Saginaw facilities.

.

5. CAPITAL REQUIREMENTS

Large capital investments would be required by Flint and GCDC to construct the KWA supply system. Furthermore, some of the options presented by DWSD (supply point from Imlay) would require the purchase by Flint of DWSD's 72-inch water main. Performing the financial analysis; therefore, required an analysis of the KWA construction cost estimate for the transmission system and Flint WTP improvements.

Revenue bonds were also identified as the source of financing the new supply system and associated improvements. This section describes the assumptions made and the interest used for financing the improvements.

KWA Supply System

The most current cost estimate of the KWA system was presented in the document titled; Lake Huron Supply Study, KWA, Appendix 20, October 2012 Preliminary Report Update, Final Report (DRAFT), October 4, 2012. The cost of construction is estimated at $272,421,558. Flint's portion would be 30% or $81,726,467.

Due to the significance of this expenditure, a detailed review of the cost was performed and is presented in this section. The analysis was performed based on the main elements of the supply system: the lake intake, the two pumping stations, and the transmission pipeline. Additionally, an analysis was performed related to construction contingencies and other costs such as engineering, legal, and administration.

Lake Intake

KWA representatives indicated in a meeting in November that the design documents for the intake were at 90% and that it was planned for advertisement in January 2013. A summary of the estimate is shown in Table 5-1.

Description	Estimate
Intake and Crib	$22,076,850
ELAC at 25%	5,519,213
Property	2,300,000
Total	**$29,896,063**

Table 5-1: KWA Intake Cost Estimate

Based on the evaluation, it appeared that the cost estimate was reasonable. Given that the design was nearly complete, the engineering, legal, administration, and construction contingencies (ELAC) at 25% were also found to be appropriate.

Pumping Stations

KWA representatives indicated that the pump stations were estimated at a level of design less than 15%. Therefore, in addition to an evaluation of their cost estimate, other water pumping station costs were used for comparison. Additionally, contractors were also contacted for costs. Table 5-2 summarizes the KWA cost estimate compared to our cost estimate performed for the Treasury.

Description	KWA	Estimate	TVA	Estimate
Pumping Stations		$24,618,080		$54,573,314
Land for Intermediate Pump Station and Reservoir		--		75,000
Subtotal		$24,618,080		$54,648,314
ELAC for Construction	25%	6,154,520	30%	16,394,494
Total		**$30,772,600**		**$71,042,808**

Table 5-2: Pumping Stations Cost Estimate

Two things to note regarding the difference in the cost estimates; firstly, there is a large difference in the cost estimates of the pumping stations. The estimate developed for the Treasury used several other pumping stations construction costs from Southeastern Michigan and discussions with contractors. These costs were then computed on a $/MG's for comparison.

Secondly, our estimate for the Treasury is based on an ELAC of 30% instead of KWA's 25%. Although 25% was acceptable for the intake, it is believed to be too low for the pumping station estimate given that the engineering effort is less than 15%.

Transmission Main

Although the specific route for the transmission main was not provided, an estimate was calculated based on the general information provided. Once again, the KWA estimate was based on a level of design less than 15%. The estimate performed for the Treasury used the line items provided by KWA for the pipeline and also consulted with contractors to evaluate the cost of construction. The comparison is shown in Table 5-3.

Although the cost of construction of the pipeline is similar, a value of 30% was used for ELAC due to the level of design. Additionally, KWA did not believe there would be any additional costs for easements; however, this did not seem practical. Therefore an estimate for acquiring the easements was added to the Treasury estimate and is based on the 277 easements identified by KWA. The cost shown includes surveying, legal, engineering, administration, etc.

Description	KWA	Estimate	TYJT	Estimate
Transmission Mains		$166,202,316		$167,419,530
ELAC for Construction	25%	41,550,579	30%	50,225,859
Subtotal		$207,752,895		$217,645,389
Easements		--		1,166,170
Total		**$207,752,895**		**$218,811,559**

Table 5-3: Transmission Pipeline Cost Estimate

Other KWA Costs

In prior estimates of the construction cost, KWA used an ELAC of 37%. In this case it could be considered that the engineering effort associated with the design would have been included. However, it is believed that KWA's reduced ELAC of 25%, does not include the design effort. Additionally, it would be prudent to assume that the owner would want a construction manager during construction of this large project. A summary of these costs are shown in Table 5-4.

Description	Estimate
Design Engineering for Pumping Stations and the Transmission Pipeline	$16,939,581
Construction Management at 5%of Project Cost Estimate of $217,645,389	14,434,609
Administration	349,440
Legal, Easements, Contract Documents	831,000
Total	**$32,554,630**

Table 5-4: Other Costs

Summary Comparison

A summary of the two cost estimates are shown in Table 5-5. Based on the comparison, the estimate performed by TYJT shows a higher cost to Flint by approximately $25,000,000.

Note that there are two other costs shown in the summary that were not previously addressed; power and backup power. Regarding the cost of providing power to the pumping facilities, the cost of $4,000,000 appears reasonable.

The KWA has repeatedly indicated that backup power is not needed. Backup power is a standard practice in the water industry. Furthermore, a loss of power at either pumping facility will prevent the supply of water to both Flint and Genesee County. For these reasons, the cost of providing backup power was included in our estimate for the Treasury.

Description	KWA Estimate	TY/T Estimate
Intake/Crib	$ 27,596,063	$ 27,596,063
Pump Stations	30,772,600	71,042,808
Transmission Mains	207,752,895	217,645,389
Power	4,000,000	4,000,000
Redundant Power for PS		1,273,200
Land for Lake Huron Pumping Station	2,300,000	2,300,000
Design Engineering/PS and Transmission		16,939,581
Construction Management		14,434,410
Administration		349,440
Legal/Easement/Contract Documents		831,000
Easements		1,166,170
Total	**$ 272,421,558**	**$ 357,578,060**
Flint Share at 30%	**$81,726,467**	**$107,273,418**

Table 5-5: Total Cost Comparison

Flint WTP Improvements

The KWA analysis identified capital costs required to convert the existing WTP from river water treatment to treating lake water. The cost estimate was identified as $7,100,000 in the 2009 report. This number was used in the our analysis, since additional information was not provided. For the purpose of the financial analysis; however, the $7,100,000 was increased by 3% each year for three years to account for inflation.

DWSD Imlay Station Supply Options

The options identified by DWSD to supply service to Flint at the Imlay Pump Station would require Flint to purchase the 72-inch water main from Imlay to Master Meter, FL-1. The pipeline is approximately 25 miles long. The estimated cost provided by DWSD for estimating purposes is $4,700,000.

Financing

The cost of financing the revenue bonds for the capital work was investigated. Based on conversations with local financial advisors knowledgeable in bond financing, an interest rate of 5% for the 25 year

period was considered acceptable. This is based on a Standard and Poor's bond rating of A without insurance.

Additional costs associated with the bond include the reserve and bond issuance fee. The bond holders will require a reserve of approximately 10% of the loan to be held for the 25 year payment period. The cost associated with the bond issuance has been estimated at 2.25% of the principal borrowed for the KWA project and 3% for the smaller loan associated with the Flint WTP improvements or the purchase of the 72-inch main.

Furthermore, since no revenue will be generated to pay on the bonds for the first three years that the system is being constructed, the cost associated with capitalizing the interest was also included.

Finally, interest on the reserve will be provided back to KWA and Flint. Although the interest is currently less than 1%, it was determined that a 3% rate would be more prudent long-term.

6. FINDINGS

Using the information described in the previous sections, a cost evaluation was conducted for the KWA supply and the DWSD options. Individual worksheets for each option are provided in Appendix B. For the purpose of comparison a 30 year period was used. This period includes the 3 year construction period, the 25 loan period and an additional two years to get a sense of the cost of operation after the loans have been paid.

There were three separate cost sheets prepared for the KWA option. The first cost sheet (KWA) is based on the cost estimate provided by KWA. The costs provided assumed no overruns or delay in construction. With KWA's own assumptions of an overrun in construction of 15% and a one year delay in operations, the KWA estimated cost becomes $686,375,920 through Year 2042.

Since this cost estimate did not appear to include the financing of revenue bonds, another cost sheet (KWA-1) was developed that included KWA's cost estimate without overruns with the additional finance costs associated with the revenue bonds. A final cost sheet (KWA-2) includes the cost associated with the revenue bonds based on the estimate provided by TYJT for the Treasury.

A summary of the cost sheets provided in Appendix B are shown in Table 6-1. Figure 6-1 shows the cumulative annual costs associated with each option.

Option	Costs through 2042 ($)	Ranking by Cost
DWSD 8 MGD Maximum Day at Imlay Station	634,795,488	1
KWA *(10/31/12 No Overruns, As Provided)**	649,775,166	2
DWSD 8 MGD Maximum Day at FL-1	672,671,705	3
KWA-1 *(10/31/12 No Overruns with Cost of Financing)*	707,279,715	4
DWSD 12 MGD Maximum Day at Imlay Station	725,576,803	5
DWSD 12 MGD Maximum Day at FL-1	762,110,308	6
KWA-2 *(Treasury Estimate)*	766,784,313	7
DWSD 18 MGD Maximum Day at FL-1	821,226,268	8

* $686,375,920 with 15% overrun in construction and a one year delay in operations

Table 6-1: Total Cost of Options through 2042

Based on the analysis, it is prudent to assume the KWA water supply option costs would be somewhere between the KWA-1 and KWA-2 options. Therefore, the analysis indicates that the two DWSD options of supplying 8 MGD on a maximum day and up to 8 MGD on average are the least cost options for Flint. These options allow Flint to maximize the use of existing assets; the City of Flint's (the Flint WTP) and DWSD's (the existing 72-inch main).

Additionally, in recent conversations with the Treasury another option was discussed that could potentially be the most cost-effective solution. Currently the Flint WTP serves as a backup if service is

lost through either the DWSD or KWA pipeline. If the a twin pipe paralleling the DWSD 72-inch water main were constructed with interconnects with the 72-inch line, then the new water main could serve as the backup to Flint and the Flint WTP could be abandoned or potentially sold to Genesee County for their use.

The construction of the parallel pipeline would be considered in the DWSD capital expenditure as a Common to All (CTA) cost. This means that the capital cost of the pipeline would be shared by all DWSD customers and not just by Flint. Preliminary analysis of this option appears to be the most cost-effective of all the options discussed. However, a more thorough cost analysis is warranted and this approach would require an agreement between Flint and DWSD.

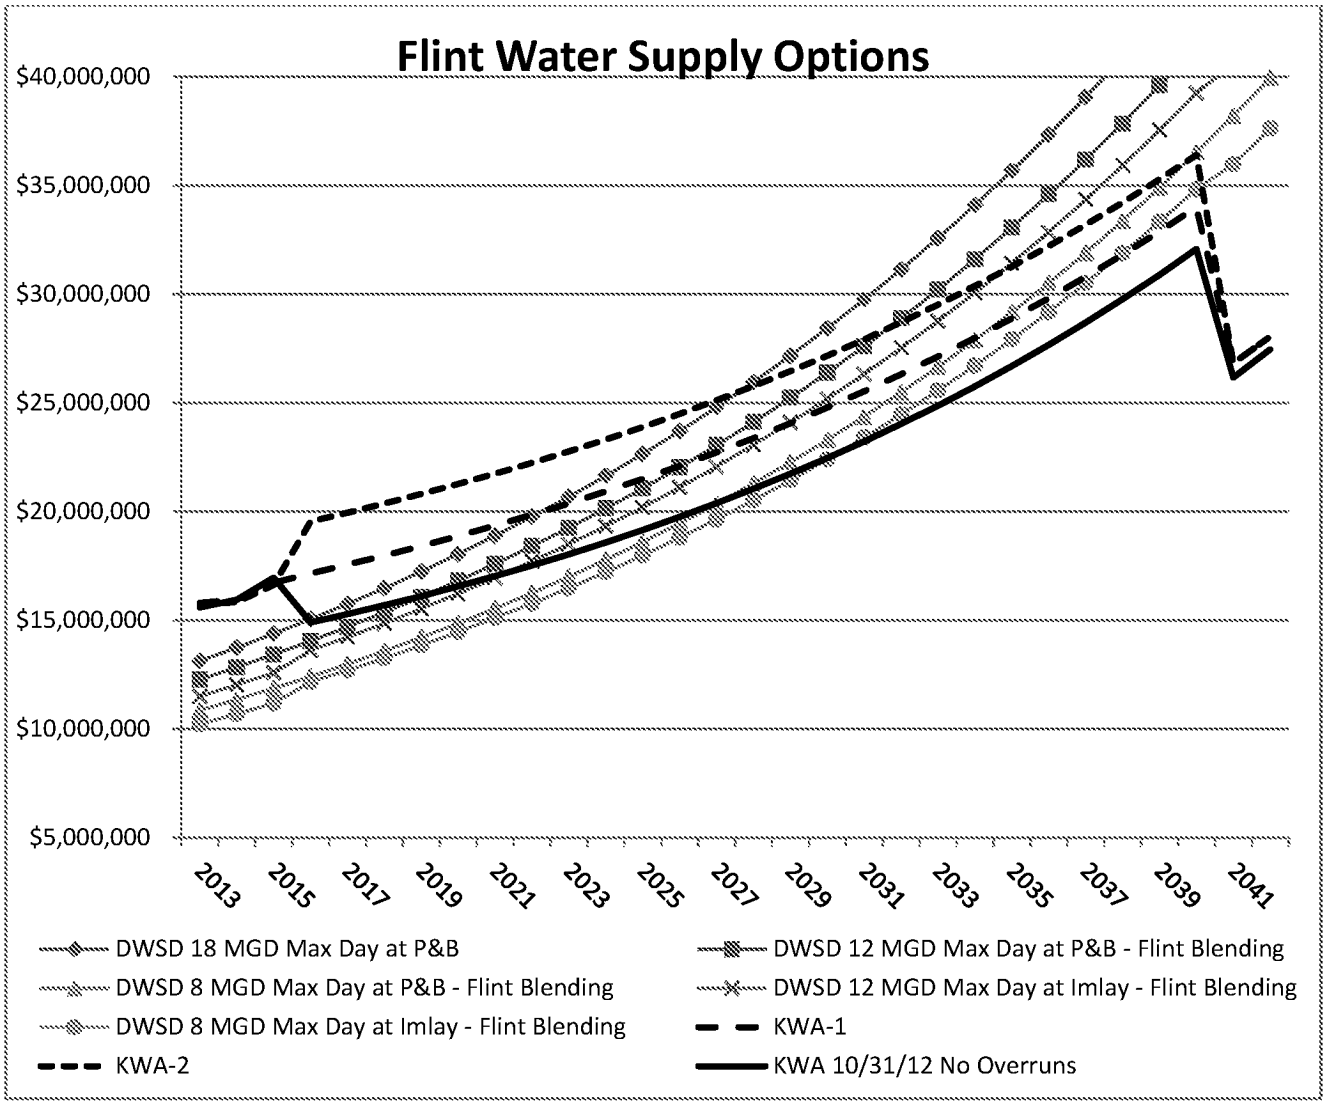

Figure 6-1: Flint Water Supply Options through 2042

7. OTHER CONSIDERATIONS

As part of the investigation other issues were identified that may result in risks to Flint that should be considered by the Treasury in determining how Flint's potable water should be supplied. These issues are related to redundancy and reliability, other items affecting cost, and Flint's desire to control its own destiny related to its water supply. These are described further below.

Redundancy/Reliability

In one of the first meetings related to this task assessment, which was held on November 1, 2012, the Genesee County Drain Commissioner, Mr. Jeff Wright, stated that one of the main reasons for pursuing the KWA supply option related to the lack of reliability of the DWSD system. He pointed to the Northeast blackout of 2003; a widespread power outage that occurred throughout parts of the Northeastern and Midwestern United States and Ontario, Canada, on Thursday, August 14, 2003. He stated that Flint and Genesee County were out of water for several days.

It is worth noting that this was a power outage of historic proportions that affected millions of Americans. However, DWSD did begin supplying water again relatively quickly in comparison to other major cities impacted by the same power outage.

Furthermore, the KWA supply system offers less redundancy to Flint than the current DWSD system. Under both options, Flint is supplied by a single pipeline; however, DWSD has backup power at all of its major facilities supplying Flint. The KWA system will not have a redundant power at its pumping facilities. This would be a major risk.

Currently, backup to the DWSD system for Flint is Flint's WTP using the Flint River as the source of supply. KWA has stated that the Flint River source would also be used as backup to Flint if the KWA supply through its pipeline was lost. However, since the Flint WTP would be upgraded to treat Lake Huron water under the KWA option, using the Flint River as a backup source would require the Flint WTP to maintain two process treatment streams.

In addition to Flint and Genesee County, the DWSD's 72-inch main supplies Imlay City, Mayfield and the Greater Lapeer County Utilities Authority (GLCUA). The volume of water contained within the 72-inch main is approximately 30 MG. Only supplying these three remaining communities would cause the water age to increase dramatically; somewhere in excess of three weeks old, before reaching the customers' master meters. Since the half-life of chlorine in the DWSD system is approximately 5 days, the chlorine would most probably be near zero requiring re-chlorination of the finished water upstream of the master meters.

Re-chlorinating is a costly and risky process due to the instability of chlorine gas. It is unknown whether DWSD would pursue this improvement or possibly abandoned the 72-inch pipeline.

If Flint is supplied by the KWA system, then DWSD supplying their other customers along the 72-inch water main may be reconsidered. Since the KWA system is a raw water supply, the communities would

either have to build a treatment facility to treat the water from KWA or find another water source for their communities.

Additional Cost and Risk Considerations

The design of the KWA supply and the construction of the system have not been completed; therefore, final costs and time to complete are unknown. Cost overruns and delays in completion will both negatively impact Flint's final cost. As example, if the project is not completed within the three year period, payment on the bonds will be due, but the revenue source needed from the sale of water could not be provided.

Furthermore, there is always a risk with large water system construction; especially those including an intake in the Great Lakes, pumping stations and rehabilitation of older water treatment plants. These risks include the potential of explosive gases in tunneling below Lake Huron, changing site conditions associated with the large number of miles of pipe installation and rehabilitating an older WTP, and the startup and debugging of the entire pumping system.

Flint has indicated that they have a high water loss. Not addressing this issue prior to sizing the Flint supply pipeline from KWA could cause the water main to be oversized along with its incremental cost in construction.

Also, the KWA supply option appears to run counter to the Treasury's Competitive Grant Assistance Program (Formerly EVIP Grant). This program has been put in place to allow for communities to consolidate their services and save money. Two existing customers of DWSD (Flint and Genesee County) along with the potential of others customers (GLCUA, Mayfield, Imlay City) separating to from another water system is in contradiction to the program.

Finally, there is a concern over the ability of smaller systems (KWA) over larger systems (DWSD) to pay for future unfunded mandates and regulations. Obviously, identifying regulation requirements over 30 years is hard to determine. However, it is widely accepted that a large system has greater ability to respond to unfunded mandates because the cost can be distributed over a large customer base.

Flint's Autonomy

Flint has indicated that a major point of consideration is that they have no control over the rate increases issued to Flint by DWSD. All other counties supplied by DWSD have representatives on the Board of Water Commissioners (BOWC). The BOWC is one of the governing bodies that approve the water rates. Since Flint and Genesee County do not have a representative on the BOWC, Flint believes they are held "hostage" to DWSD's rates and cost of service.

This issue was stated in Flint's handout at the November 1, 2012 meeting. The handout is titled, "Flint Water Supply Future." However, it is worth noting in the same handout, Flint also identifies similar concerns with the governing board of the KWA system. Notably, that although Flint and Genesee County will be the only customers and Flint will be responsible for 30 percent of the construction cost,

they will have a minority vote on the KWA board. Furthermore, there are other communities (Lapeer County, the City of Lapeer, and Sanilac County) that sit on the board and vote. However, they are not purchasing water nor contributing to the construction costs.

MEETING MINUTES

IN ATTENDANCE: Sue McCormick, DWSD Director
Darryl Latimer, DWSD Deputy Director
George Karmo, TYJT
Awni Qaqish, TYJT
Dave Guastella, TYJT

DATE: November 24, 2012

PURPOSE OF MEETING: Meeting with DWSD for the Indefinite-scope, Indefinite-delivery Contract Number 00383, 2012 Professional General Architectural/Engineering Services – City of Flint Water Supply Assessment

PREPARED BY: Dave Guastella

A meeting was held at the DWSD Main Office Building on November 19, 2012 to discuss the water supply options being presented by DWSD to the City of Flint. The main items discussed generally followed the attached DWSD Discussion/Questions that were provided to the Department prior to the meeting. A summary of the key points discussed are provided below.

DISCUSSION ITEMS

1. Question/Discussion Item: Verify that the four options presented at the November 1, 2012 meeting are still available for consideration:

    a. Supplied from Potter & Baxter using the new model contract (assume a Maximum Day Customer),

    b. Supplied from Imlay Station,

    c. Finished un-pumped supply from Lake Huron WTP, and

    d. Raw un-pumped supply from Lake Huron WTP.

    DWSD prefers to focus on the first two supply point listed; from the current location at Potter & Baxter and at the Imlay Pump Station as these apply specifically to Flint.

    DWSD provided the attached summary regarding the current costs to Flint based on the various options that DWSD is offering. The savings associated with each option is provided as well. As example, if Flint were to purchase water from the supply point located at Imlay Station, the current cost to Flint would be $5,661,000 and it would be a savings of nearly 50%

Comments: Meeting minutes were recorded based on the understanding of the author. Please contact the author within three days if you have any different understanding of the meeting. These minutes will be considered approved unless comments are provided within three days.

compared to Flint's current rate.

2. Question/Discussion Item: What additional capital improvements will be required for each option?

   If Imlay Pump Station is selected as the supply point then Flint would need to purchase the 72-inch water main and an agreement to supply Lapeer would need to be worked out. DWSD believes that this could be worked out through a "wheeling" charge over the 72-inch main or possibly moving the supply point downstream of the Lapeer connection.. DWSD estimates the value of the water main at $4.7M. Flint could bond for this amount or DWSD could include the cost into Flint's rate.

3. Question/Discussion Item: Are there other options being presented that should be considered (e.g., blending)?

   Only the two options indicated above are currently being considered and both would include blending; DWSD providing 2/3 of the supply and the Flint WTP providing the other 1/3.

4. Question/Discussion Item: To evaluate each option over the 25 year planning period, provide:

   a. Annual water rate for Flint for 2002 through 2012, and the

   b. Projected annual rate adjustment for each option. What are the proposed measures to keep the rate adjustments down in the future?

   DWSD provided the attached historical rates from 2002 through 2012 for the existing water contract with Flint. The attachment also includes what the rates would have been if Flint had signed the new model contract or had taken service from Imlay. These rates were provided back to 2010.

   DWSD believes that 5% would be a good estimation to assume for their annual escalation in rates over the 25 year planning period.

5. Question/Discussion Item: Flint stated a 10% increase in the capacity charge. What number did DWSD provide Flint?

   It was unclear to DWSD where the 10% increase in capacity charge stated by Flint came from. DWSD's information provided shows an average of 6.3%. DWSD offered a meeting with TYJT to discuss how the fixed and commodity charges are allocated.

6. Question/Discussion Item: Flint financial comparison is based on the initial Cost of $14,413,858, which includes $2,725,538 for Flint WTP operating cost; i.e, DWSD charge is $11,688,320. How good is this number?

   DWSD indicated that the charge of $11,638,320 is good through 6/30/13.based on their existing contract with DWSD.

7. Question/Discussion Item: KWA's initial charge to Flint is based on 12 MGD. Is DWSD charge

based on 12 MGD?

Yes, 12 MGD from DWSD would be a maximum with Flint supplying 6 MGD for a total of 18 MGD (2/3 vs. 1/3).

Comments: Meeting minutes were recorded based on the understanding of the author. Please contact the author within three days if you have any different understanding of the meeting. These minutes will be considered approved unless comments are provided within three days.

CITY OF FLINT WATER SUPPLY ASSESSMENT

DWSD Discussion/Questions for the November 19, 2012 Meeting

1. Verify that the four options presented at the November 1, 2012 meeting are still available for consideration:
    c. Supplied from Potter & Baxter using the new model contract (assume a Maximum Day Customer),
    d. Supplied from Imlay Station,
    e. Finished un-pumped supply from Lake Huron WTP, and
    f. Raw un-pumped supply from Lake Huron WTP.
2. What additional capital improvements will be required for each option?
3. Are there other options being presented that should be considered (e.g., blending)?
4. To evaluate each option over the 25 year planning period, provide:
    g. Annual water rate for Flint for 2002 through 2012, and the
    h. Projected annual rate adjustment for each option. What are the proposed measures to keep the rate adjustments down in the future?
5. Flint stated a 10% increase in the capacity charge. What number did DWSD provide Flint?
6. Flint financial comparison is based on the initial Cost of $14,413,858, which includes $2,725,538 for Flint WTP operating cost, i.e DWSD charge is $11,688,320. How good is this number?
7. KWA's initial charge to Flint is based on 12 MGD. Is DWSD charge based on 12 MGD?

DATE: November 24, 2012

PURPOSE OF MEETING: Meeting with the City of Flint for the Indefinite-scope, Indefinite-delivery Contract Number 00383, 2012 Professional General Architectural/Engineering Services – City of Flint Water Supply Assessment

PREPARED BY: Dave Guastella

A meeting was held at the City of Flint Municipal Center on November 20, 2012 to discuss the water supply option being presented by the Karegnondi Water Authority (KWA) to the City of Flint. The main items discussed generally followed the attached KWA Discussion/Questions that were provided to City prior to the meeting. A summary of the key points discussed are provided below.

The questions submitted are repeated in the Discussion Items for easy reference. A summary of the action items generated from the meeting follow the Discussion Items.

DISCUSSION ITEMS

1. Question/Discussion Item: Is the maximum day demand of 18 MGD for Flint the maximum day demand (MDD) throughout the 25 year planning period? If not, what is the 25 year projected MDD?

   KWA would supply up to 18 MGD. 18 MGD has been assumed as the maximum day demand and 12 MGD is assumed as the average day demand throughout the 25 year planning period.

2. Question/Discussion Item: Copy of the intake contract documents and engineer's estimate.

   The intake contract documents are approximately 90% complete and are not available for distribution. However, the updated Appendix 20, dated October 4, 2012 includes the most recent cost estimate of the intake based on the current design in process.

Comments: Meeting minutes were recorded based on the understanding of the author. Please contact the author within three days if you have any different understanding of the meeting. These minutes will be considered approved unless comments are provided within three days.

3. Question/Discussion Item: Documentation of the Flint WTP improvements required and cost estimate.

   The costs are approximately $7M as presented in the September 2009 Preliminary Engineering Report. However, this estimate has been updated. Some processes have been eliminated. John O'Brien will provide the updated costs and the description of the planned improvements to the plant.

4. Question/Discussion Item: Confirm Flint's allocated percentage of the KWA capital improvements (30%?).

   Yes, the allocation is based on 18 MGD/60 MGD total capacity.

5. Question/Discussion Item: Copy of the proposed KWA operating agreement for Flint.

   John O'Brien will provide the operating agreement as well as the Capacity Contract and Articles of Incorporation.

6. Question/Discussion Item: What is the annual operating agreement adjustment projected for the 25 year planning period?

   This information is provided in Appendix 14, Table 14.2 of the September 2009 Preliminary Engineering Report. Operating cost based on Table 1. Used 12 MGD as average day demand (ADD). Assumed 5% as the annual increase in operating costs. John O'Brien indicated that these operating costs were based on Genesee County's operating costs. John O'Brien will provide the last 10 years of audited financial statements for the water fund.

   To assess operating and maintenance costs for the Flint WTP, Duffy will provide multiple years of financial statements for the water fund. Duffy did not believe they had 10 years, but they will provide what they have.

   Regarding operation and maintenance costs, Flint believes that these costs will increase by 2/3 of what they are now.

7. Question/Discussion Item: Need the route of the pipelines and the locations of the facilities proposed. Purpose is to identify constraints that impact costs (i.e., utilities, environmental (e.g. wetlands), easements, etc.).

   KWA will not release the route due to concerns regarding speculation of land and easements. John O'Brien did indicate that the Lake Huron pump station would be at Fisher and M-25. The intermediate pump station site is near a location of the Lapeer/Sanilac/St. Clair border; where all three meet.

8. Question/Discussion Item: KWA's initial charge to Flint is based on a 12 MGD average day demand. What is the basis of this number? Are there population projections and water use figures available that were used to determine the Flint demand for the 25 year planning period?

Comments: Meeting minutes were recorded based on the understanding of the author. Please contact the author within three days if you have any different understanding of the meeting. These minutes will be considered approved unless comments are provided within three days.

This was answered in Question No. 1 above.

9. Question/Discussion Item: Is there a transition plan and cost during construction of the KWA system identified?

   Flint is looking for an agreement with DWSD for back-up supply from the 72-inch main at the Genesee border.

10. Question/Discussion Item: The October 4, 2012 Preliminary Engineering Report Update states: "no backup power is planned for the pumps" (LHPS) and "No backup power is planned for pumping" (IPS). In case of power loss, how would Flint supply its customers?

    Flint indicated that they have adequate storage to supply the system for 6 to 7 days. Flint has 55 MG of storage and Genesee County has 65 MG for 2.5 days.

11. Question/Discussion Item: The latest plan shows only a 5 million gallon ground reservoir is planned for balancing between LHPS and IPS. How is redundancy maintained?

    In cases of emergency, Flint indicated that the back-up for the KWA system will be the same as it is now with DWSD; they will use the Flint River as the source water. Flint currently operates their plant four times a year.

    When questioned as to whether the WTP will be able to treat both lake water from the KWA system and river water Flint indicated that once the improvements identified in the September 2009 Preliminary Engineering Report are completed they will be able to accomplish both treatment processes. Flint will provide a schematic of the treatment trains at the WTP and a copy of the Flint transmission system.

    Genesee County indicated that additional redundancy would also be provided from the new Genesee County WTP.

    Regarding hydraulic transients; Genesee County indicated that a model analysis has not been included, but capital costs for mitigating transients have been included.

12. Question/Discussion Item: Related to the construction cost:

    a. Does it include an additional traffic lane since the construction will occupy half the right of way? *Not required, all roads are county roads; however, there are a few State road crossings*.

    b. Does it include costs/fees for permit requirements such as inspection cost by the jurisdictional authorities? As a point of reference, the permit fee costs for the Flint Transmission System came out to be $5.8 million. *Not required; all of the counties have waived any fees.*

    c. Does the cost of the steel pipe segments include corrosion protection measures such as

anode stations and related O&M? *Yes; however, the KWA has not settled on using steel pipe. PCCP pipe may be used. Steel shown in estimate because it is highest in cost and therefore the pricing is conservative.*

d. SCADA monitoring stations require power. Is the cost of bring power to the SCADA stations included? Again, as a point of reference for the Flint Transmission System we estimated $800,000 for power to SCADA and valve operators. *Yes, Genesee County did emphasize that the SCADA system will be simple and straightforward because a lot of controls are not required.*

e. Other items discussed at the meeting included:

- The 2009 plant improvement cost is still good; however, there will be some reduction, such as a sulfuric chloride feed system that was eliminated. Plant capacity now is 36MGD, but will be 18 MGD.
- The KWA Lake Huron Pumping Station (LHPS) is now only high lift pump station.
- Genesee County will provide the distance of the intake pipe from the crib to the LHPS.
- The intake project is almost ready to bid; waiting for the COE permit.
- Genesee County is estimating the construction for the pipe lines and pump stations will begin July 2013.
- The route has been flown for survey.
- Genesee County is estimating construction will be complete and the project will be placed in service by Jan 2016.
- Genesee County to provide a list of assumptions that the $272 million cost estimate is based on since the route is now known.

13. The Flint River is identified as a backup: At what capacity? MDD or emergency supply?

    The Flint River would serve as a back up supply.

14. Where did the 40 years come from (Flint hostage to Detroit)? DWSD's new contracts are 30 years with openers to revise terms of supply (volume and pressure) after the first two years, then three years, and then in five year increments thereafter.

    The 40 years was stated in error. The reference was to DWSD's requirement to sign a 30 year contract.

    After 40 years Flint will own 30% of the project and can sell their share of ownership if they want. Conversely, with DWSD, they continue to pay for the capital projects but have no ownership. Flint believes they will know what they will be charged for the next 25 years versus DWSD that can't commit to a fixed escalation.

Comments: Meeting minutes were recorded based on the understanding of the author. Please contact the author within three days if you have any different understanding of the meeting. These minutes will be considered approved unless comments are provided within three days.

Items:	***Assigned To:***	***Date to Complete***
1. Updated Costs for the Flint WTP Improvements and a description of the improvements.	John O'Brien	11/21/12
2. KWA Operating Agreement, Capacity Contract and Articles of Incorporation.	John O'Brien	11/20/12
3. Provide the last 10 years of audited financial statements for the Genesee water fund.	John O'Brien	11/20/12
4. Provide multiple years of financial statements for the City of Flint water fund.	Duffy Johnson	11/26/12
5. Provide schematic of the Flint WTP and a map of the Flint transmission system.	Brent Wright	11/26/12
6. Provide the length of the intake pipe from the crib to the pump station.	John O'Brien	11/20/12
7. Provide a list of assumptions that the $272 million cost estimate is based on since the route is now known.	John O'Brien	11/26/12

Comments: Meeting minutes were recorded based on the understanding of the author. Please contact the author within three days if you have any different understanding of the meeting. These minutes will be considered approved unless comments are provided within three days.

CITY OF FLINT WATER SUPPLY ASSESSMENT

KWA Discussion/Questions for the November 20, 2012 Meeting

1. Is the maximum day demand of 18 MGD for Flint the maximum day demand (MDD) throughout the 25 year planning period? If not, what is the 25 year projected MDD?
2. Copy of the intake contract documents and engineer's estimate.
3. Documentation of the Flint WTP improvements required and cost estimate.
4. Confirm Flint's allocated percentage of the KWA capital improvements (30%?).
5. Copy of the proposed KWA operating agreement for Flint.
6. What is the annual operating agreement adjustment projected for the 25 year planning period?
7. Need the route of the pipelines and the locations of the facilities proposed. Purpose is to identify constraints that impact costs (i.e., utilities, environmental (e.g. wetlands), easements, etc.).
8. KWA's initial charge to Flint is based on a 12 MGD maximum day demand. What is the basis of this number? Are there population projections and water use figures available that were used to determine the Flint demand for the 25 year planning period?
9. Is there a transition plan and cost during construction of the KWA system identified?
10. The October 4, 2012 Preliminary Engineering Report Update states: "no backup power is planned for the pumps" (LHPS) and "No backup power is planned for pumping" (IPS). In case of power loss, how would Flint supply its customers?
11. The latest plan shows only a 5 million gallon ground reservoir is planned for balancing between LHPS and IPS. How is redundancy maintained?
12. Related to the construction cost:
    a. Does it include an additional traffic lane since the construction will occupy half the right of way?
    b. Does it include costs/fees for permit requirements such as inspection cost by the jurisdictional authorities? As a point of reference, the permit fee costs for the Flint Transmission System came out to be $5.8 million.

Comments: Meeting minutes were recorded based on the understanding of the author. Please contact the author within three days if you have any different understanding of the meeting. These minutes will be considered approved unless comments are provided within three days.

c. Does the cost of the steel pipe segments include corrosion protection measures such as anode stations and related O&M?
d. SCADA monitoring stations require power. Is the cost of bring power to the SCADA stations included? Again, as a point of reference the for the Flint Transmission System we estimated $800,000 for power to SCADA and valve operators.

13. The Flint River is identified as a backup: At what capacity? MDD or emergency supply?
14. Where did the 40 years come from (Flint hostage to Detroit)? DWSD's new contracts are 30 years with openers to revise terms of supply (volume and pressure) after the first two years, then three years, and then in five year increments thereafter.

Comments: Meeting minutes were recorded based on the understanding of the author. Please contact the author within three days if you have any different understanding of the meeting. These minutes will be considered approved unless comments are provided within three days.

Good afternoon:

Attached, please find the blood lead level test results for Flint zip codes 48501-48507, as well as a corresponding press release and talking points. With your approval and edits, we are planning to notify external partners tomorrow at 9:30 a.m. then post the report on www.michigan.gov/flintwater and issue the press release at 10 a.m.

Please let us know if you have any questions or concerns.

Thanks and best,

Jennifer Eisner

Michigan Department of Health and Human Services (MDHHS)
Blood Lead Level Test Results for Flint Zip Codes 48501-48507
Summary as of October 30, 2015

Executive Summary

This report is generated by MDHHS to track Blood Lead Level test results in Flint, Michigan.

- Counts on this report include both capillary and venous blood tests. People who have had multiple tests are counted only once.
- Since 10/1/2015, an additional 963 people have been tested in Flint.
- Continued testing efforts by Genessee County Health Department, MDHHS and local medical personnel have identified 18 children with blood lead levels greater than or equal to 5µg/dL since 10/1/2015.
- Three percent of the children younger than 6 years old tested since 10/1/2015 have had blood lead levels greater than or equal to 5µg/dL.
- Additional testing is ongoing. Counts will vary as new results are added.

Number of People Tested for Lead in Flint

Total number of people tested for lead from 1/1/2013 to 4/14/2014	4657
Total number of people tested for lead from 4/15/2014 to 9/30/2015	5017
Total number of people tested for lead since 10/1/2015:	**963**

Children Younger than 6 Years Old with Blood Lead Levels (BLL) ≥5µg/dL

Total number of children tested for lead from 1/1/2013 to 4/14/2014	3811
Number of child BLL test results ≥5µg/dL from 1/1/2013 to 4/14/2014	112
Total number of children tested for lead from 4/15/2014 to 9/30/2015:	4156
Number of child BLL test results ≥5µg/dL from 4/15/2014 to 9/30/2015:	181
Total number of children tested for lead since 10/1/2015:	**385**
Number of child BLL test results ≥5µg/dL since 10/1/2015:	**12**

Adults (18 Years or Older) with Blood Lead Levels (BLL) ≥5µg/dL

Total number of adults tested for lead from 1/1/2013 to 4/14/2014	170
Number of adult BLL test results ≥5µg/dL from 1/1/2013 to 4/14/2014	22
Total number of adults tested for lead from 4/15/2014 to 9/30/2015:	207
Number of adult BLL test results ≥5µg/dL from 4/15/2014 to 9/30/2015:	13
Total number of adults tested for lead since 10/1/2015:	**289**
Number of adult BLL test results ≥5µg/dL since 10/1/2015:	**6**

Children 6 to 17 Years Old with Blood Lead Levels (BLL) ≥5µg/dL

Total number of children tested for lead from 1/1/2013 to 4/14/2014	676
Number of child BLL test results ≥5µg/dL from 1/1/2013 to 4/14/2014	5
Total number of children tested for lead from 4/15/2014 to 9/30/2015:	654
Number of child BLL test results ≥5µg/dL from 4/15/2014 to 9/30/2015:	7
Total number of children tested for lead since 10/1/2015:	**289**
Number of child BLL test results ≥5µg/dL since 10/1/2015:	**6**

Blood Lead Levels in Flint Talking Points
November 18, 2015

Blood Lead Level Testing Results

- The Michigan Department of Health and Human Services is releasing a report regarding blood lead levels in Flint children and adults in zip codes 48501-48507.
- The purpose of the report is to inform residents about blood lead level testing efforts in Flint and provides cumulative total numbers.
- It is not intended to be a technical report but a technical description, and further analysis of the data in the report is underway.
- The data in the report include the total number of tests conducted and the total number of elevated blood lead levels ≥5µg/dL (micrograms per deciliter), broken down by date and age ranges.
    - Specifically, the current report breaks down the data by the 16 months prior to the switch in water source for Flint (January 1, 2013 through April 14, 2014), to the 17 months after the switch (April 15, 2014 through September 30, 2015), and after the lead exposure prevention campaign was initiated by the State in Flint October 1, 2015 to October 30, 2015. These numbers will continue to be updated.
    - The report also breaks down the number of tests and elevated blood lead levels by children younger than 6, children ages 6-17, and adults 18 years and older.
        - Lead exposure for children younger than 6 is of particular concern because they are more sensitive to the effects of lead and tend to absorb more than older children and adults.
- Data in the report includes both capillary and venous blood tests. People who have had multiple tests are counted only once.
- 963 people were tested in Flint between October 1, 2015, and October 30, 2015, 18 children 17 years of age or younger had elevated blood lead levels. Six adults over the age of 18 were identified with elevated blood lead levels during this time as well.
- With these testing results, MDHHS is working closely with the Genesee County Health Department to conduct case management to ensure that these families are receiving the follow up care they need - including additional blood testing and a home investigation to identify and help reduce the potential for additional lead exposure in their environment.
- In addition to this report, MDHHS has zip code level data available by quarter for 48503-48507 by request. Zip codes 48501-48502 do have some cases, but the numbers are too small to release by quarter.

Water Filters and Replacement Filters

- Our first action item is to work closely with our public and private partners to provide water filters to Flint residents and MDHHS clients.
- To meet this priority, the governor identified one million dollars in state funding to purchase water filters for Flint residents.
- The Brita SAFF-100 filters being distributed by the department and GCCARD do meet the NSF/ANSI 53 standards for drinking water treatment units.
- The Brita faucet filtration system we are distributing are National Sanitation Foundation certified to reduce lead in drinking water.
- Free water filters and replacement cartridges are available to current Michigan Department of Health and Human Services clients and Flint residents who are on the Flint water system at four locations:
    - Flint residents who are not current MDHHS clients should visit one of two Genesee County Community Action Resource Department offices to obtain a filter.
        - at 2727 Lippincott and 601 North Saginaw in Flint
    - Current MDHHS clients in the city of Flint should visit their local MDHHS office:
        - At 125 E. Union St. or 4809 Clio Road
- Staff will be onsite at all four locations from 9 a.m. to 4 p.m., Monday through Friday, to distribute filters and assist residents who have questions about proper installation.
- Given the questions and concerns regarding the change in water source in Flint, MDHHS authorized the use of emergency services funding to provide water filters for MDHHS clients receiving assistance in the city of Flint.
- This funding will support active Family Independence Program (FIP), Food Assistance Program (FAP), Child Development and Care (CDC), State Disability Assistance (SDA), State Disability Assistance (SDA), or Social Security Insurance (SSI) recipients so that they can obtain filters that are National Sanitation Foundation (NSF) certified to remove lead and ANSI Standard 53.
- MDHHS has also posted an instructional video on the MDHHS YouTube channel to help residents properly install water filters, and to demonstrate how to replace the original filter when it expires.
    - https://www.youtube.com/watch?v=plsOvmH 0
- MDHHS currently serves approximately 25,000 households in Flint.

Background Information

- Initial analysis of MDHHS data found that blood lead levels of children in Flint have followed an expected seasonal trend; due to small numbers further analysis was initiated.

- While this analysis of blood lead levels in Flint as a whole remains true, after a comprehensive and detailed review down to the zip code level, we have found that the state analysis is consistent with that presented by Hurley.
- Director Lyon is working closely with DEQ and the administration to take active steps to reduce all potential lead exposures in Flint and across the state.
- Our Chief Medical Executive has been in communication with the lead investigator at Hurley Children's Hospital, and we continue to work with Hurley, the city of Flint, local and state leaders to verify and analyze data trends.
- Zip code-level data does show that there has been an increase in elevated childhood blood lead levels in specific communities.
    - This does not conclusively mean that the water source change is the sole cause of the increase, but data does show an association.
    - There is an increased proportion of children with elevated blood levels in several zip codes, particularly 03 and 04. These appear to have increased over the last 1.5 years.
    - Lead exposure can occur from a number of different sources (such as paint, gasoline, solder, and consumer products) and through different pathways (such as air, food, water, dust, and soil).
    - Although there are several exposure sources, lead-based paint is still the most widespread and dangerous high-dose source of lead exposure for young children in the US and Michigan.
- We reviewed MDHHS statewide data using the same methodology used by Hurley, looking at our numbers by zip code and age ranges, and filtering out non-Flint children.
- Routine surveillance of blood lead levels does not analyze data down to the zip code level. Detailed analysis like this occurs when there is reason to focus in on precise locations or populations.
- MDHHS is working closely with the Michigan Department of Environmental Quality, Hurley Children's Hospital, the Genesee County Health Department, and community organizations to initiate further action steps.
- We understand that cost may be a barrier to following the recommendations for drinking water, which is why NSF-certified filters are being distributed to residents on the Flint water system free of charge.
- MDHHS is recommending that residents follow the Public Health Advisory issued by the Genesee County Health Department, as well as take further steps to reduce exposures to all forms of lead in and around their homes.

MDHHS Stats and Facts

- 'High Risk' Zip codes (48503 and 48504)

- Blood lead level rates among children under six years of age in the high risk zip codes (48503, 48504) were 2.7 times higher than the rest of Genesee County before the switch to Flint River Water.
- After the switch to Flint River Water, rates in the high risk Zip codes were 3.2 times that of the rest of Genesee County.

- Other Zip codes in Flint
  - Rates of elevated blood lead levels among children under six years of age in other parts of the city of Flint were 2 times that of the rest of Genesee County before the switch to Flint River Water.
  - The magnitude of the elevated rate remained roughly the same during the period after the water source switch.
- Lead abatement through MDHHS was federally funded up until FY14 when Michigan began providing additional funds to abate homes.
- In FY14, $1.25M General Fund was added. In FY15, General Fund was bumped up to $1.75M and FY16, General Fund remains at $1.75M.

Reducing and Removing Lead Exposure

- Use only cold filtered water from the tap for drinking, cooking, and making baby formula. Hot water is more likely to contain higher levels of lead. The lead in household water usually comes from the service line that connects your house to the water main or the plumbing in your house, not from the local water supply.
- In housing built before 1978, it can be assumed that the paint has lead unless tests show otherwise.
- Make sure your child does not have access to peeling paint or chewable surfaces painted with lead-based paint.
- Children and pregnant women should not be present in housing built before 1978 that is undergoing renovation. They should not participate in activities that disturb old paint or in cleaning up paint debris after work is completed.
- Create barriers between living/play areas and lead sources. Until environmental clean-up is completed, you should clean and isolate all sources of lead.
  - Close and lock doors to keep children away from chipping or peeling paint on walls. You can also apply temporary barriers such as contact paper or duct tape, to cover holes in walls or to block children's access to other sources of lead.
- Regularly wash children's hands and toys. Hands and toys can become contaminated from household dust or exterior soil. Both can be lead sources.
- Regularly wet-mop floors and wet-wipe window components. Because household dust is a major source of lead, you should wet-mop floors and wet-wipe horizontal surfaces every 2-3 weeks.

    - Windowsills and wells can contain high levels of leaded dust. They should be kept clean. If feasible, windows should be kept shut to prevent abrasion of painted surfaces or opened from the top sash.
- Take off shoes when entering the house to prevent bringing lead-contaminated soil in from outside.
- Prevent children from playing in bare soil; if possible, provide them with sandboxes. Plant grass on areas of bare soil or cover the soil with grass seed, mulch, or wood chips, if possible.
    - Until the bare soil is covered, move play areas away from bare soil and away from the sides of the house. If you have a sandbox, cover the box when not in use to prevent cats from using it as a litter box. That will help protect children from exposure to animal waste.
- Avoid using makeup, containers, cookware, or tableware to store or cook foods or liquids that are not shown to be lead-free.
- Remove recalled toys and toy jewelry immediately from children.
- Shower and change clothes after finishing a task that involves working with lead-based products such as stained glass, making bullets, or using a firing range.

If possible, shower and change before returning home if your job requires you to work with or around lead. These jobs can include painting, plumbing, and some factory work.

WIC Children

- There are 855 infants participating in WIC in Flint.
- We are working with partners at the United Way to ensure that WIC families have access to water filters and bottled water.
- In homes with infants on WIC, if the household has documentation from an official source documenting unsanitary water supply issues, that family may be eligible to receive ready-to-feed formula. Families should contact WIC to see if they are eligible.
- Each household will be considered on an individual basis.
- WIC cannot cover bottled water.

Blood Lead Levels in Flint Talking Points

- Initial analysis of MDHHS data found that blood lead levels of children in Flint have followed an expected seasonal trend; due to small numbers further analysis was initiated.

- While this analysis of blood lead levels in Flint as a whole remains true, after a comprehensive and detailed review down to the zip code level, we have found that the state analysis is consistent with that presented by Hurley.
- Director Lyon is working closely with DEQ and the administration to take active steps to reduce all potential lead exposures in Flint and across the state.
- Our Chief Medical Executive has been in communication with the lead investigator at Hurley Children's Hospital, and we continue to work with Hurley, the city of Flint, local and state leaders to verify and analyze data trends.
- Zip code-level data does show that there has been an increase in elevated childhood blood lead levels in specific communities.
    - This does not conclusively mean that the water source change is the sole cause of the increase, but data does show an association.
    - There is an increased proportion of children with elevated blood levels in several zip codes, particularly 03 and 04. These appear to have increased over the last 1.5 years.
    - Lead exposure can occur from a number of different sources (such as paint, gasoline, solder, and consumer products) and through different pathways (such as air, food, water, dust, and soil).
    - Although there are several exposure sources, lead-based paint is still the most widespread and dangerous high-dose source of lead exposure for young children in the US and Michigan.
- We reviewed MDHHS statewide data using the same methodology used by Hurley, looking at our numbers by zip code and age ranges, and filtering out non-Flint children.
- Routine surveillance of blood lead levels does not analyze data down to the zip code level. Detailed analysis like this occurs when there is reason to focus in on precise locations or populations.
- MDHHS is working closely with the Michigan Department of Environmental Quality, Hurley Children's Hospital, the Genesee County Health Department, and community organizations to initiate further action steps.
- We understand that cost may be a barrier to following the recommendations for drinking water, which is why NSF-certified filters are being distributed to residents on the Flint water system free of charge.
- MDHHS is recommending that residents follow the Public Health Advisory issued by the Genesee County Health Department, as well as take further steps to reduce exposures to all forms of lead in and around their homes.

MDHHS Stats and Facts

- 'High Risk' Zip codes (48503 and 48504)

    - Blood lead level rates among children under six years of age in the high risk zip codes (48503, 48504) were 2.7 times higher than the rest of Genesee County before the switch to Flint River Water.
    - After the switch to Flint River Water, rates in the high risk Zip codes were 3.2 times that of the rest of Genesee County.
- Other Zip codes in Flint
    - Rates of elevated blood lead levels among children under six years of age in other parts of the city of Flint were 2 times that of the rest of Genesee County before the switch to Flint River Water.
    - The magnitude of the elevated rate remained roughly the same during the period after the water source switch.
- Lead abatement through MDHHS was federally funded up until FY14 when Michigan began providing additional funds to abate homes.
- In FY14, $1.25M General Fund was added. In FY15, General Fund was bumped up to $1.75M and FY16, General Fund remains at $1.75M.

Reducing and Removing Lead Exposure

- Use only cold filtered water from the tap for drinking, cooking, and making baby formula. Hot water is more likely to contain higher levels of lead. The lead in household water usually comes from the service line that connects your house to the water main or the plumbing in your house, not from the local water supply.
- In housing built before 1978, it can be assumed that the paint has lead unless tests show otherwise.
- Make sure your child does not have access to peeling paint or chewable surfaces painted with lead-based paint.
- Children and pregnant women should not be present in housing built before 1978 that is undergoing renovation. They should not participate in activities that disturb old paint or in cleaning up paint debris after work is completed.
- Create barriers between living/play areas and lead sources. Until environmental clean-up is completed, you should clean and isolate all sources of lead.
    - Close and lock doors to keep children away from chipping or peeling paint on walls. You can also apply temporary barriers such as contact paper or duct tape, to cover holes in walls or to block children's access to other sources of lead.
- Regularly wash children's hands and toys. Hands and toys can become contaminated from household dust or exterior soil. Both can be lead sources.
- Regularly wet-mop floors and wet-wipe window components. Because household dust is a major source of lead, you should wet-mop floors and wet-wipe horizontal surfaces every 2-3 weeks.

    - Windowsills and wells can contain high levels of leaded dust. They should be kept clean. If feasible, windows should be kept shut to prevent abrasion of painted surfaces or opened from the top sash.
- Take off shoes when entering the house to prevent bringing lead-contaminated soil in from outside.
- Prevent children from playing in bare soil; if possible, provide them with sandboxes. Plant grass on areas of bare soil or cover the soil with grass seed, mulch, or wood chips, if possible.
    - Until the bare soil is covered, move play areas away from bare soil and away from the sides of the house. If you have a sandbox, cover the box when not in use to prevent cats from using it as a litter box. That will help protect children from exposure to animal waste.
- Avoid using makeup, containers, cookware, or tableware to store or cook foods or liquids that are not shown to be lead-free.
- Remove recalled toys and toy jewelry immediately from children.
- Shower and change clothes after finishing a task that involves working with lead-based products such as stained glass, making bullets, or using a firing range.

If possible, shower and change before returning home if your job requires you to work with or around lead. These jobs can include painting, plumbing, and some factory work.

WIC Children

- There are 855 infants participating in WIC in Flint.
- We are working with partners at the United Way to ensure that WIC families have access to water filters and bottled water.
- In homes with infants on WIC, if the household has documentation from an official source documenting unsanitary water supply issues, that family may be eligible to receive ready-to-feed formula. Families should contact WIC to see if they are eligible.
- Each household will be considered on an individual basis.
- WIC cannot cover bottled water.

Flint EBL Data Summary

Communications Plan

Purpose

To release elevated blood lead level data for the city of Flint and communicate the summary to our partners in the community as well as local and state media. The report is intended to inform residents about blood lead level testing efforts in Flint and provide preliminary cumulative numbers on an ongoing basis.

To Do

- Epi discussion regarding timeframes on one-page summary
- Epi discussion regarding historical data for context
- Update press release to include information about home environmental investigations

External outreach

- Genesee County Health Department – Dr. Eden Wells
- Dr. Mona Hannah-Attisha – Dr. Eden Wells
- Task Force Members – Dr. Eden Wells
- Legislative notifications – Elizabeth Hertel

Announcement

- Coordinate timing with DEQ, Governor's Office
- Post summary report on the www.michigan.gov/flintwater website
- Post press release on MDHHS site
- Issue press release

Media outreach

- Interviews with Dr. Eden Wells
    - Ron Fonger, MLive
    - Kristi Tanner, Detroit Free Press
    - Robin Erb, Detroit Free Press
    - Steve Carmody, Michigan Radio

MDHHS Contacts – Office Number 517-241-2112

Subject: PRESS RELEASE: Mayor Weaver Unveils 100 Day Plan
Attachments: Mayor Weaver 100 Day Plan.pdf

For Immediate Release

Mayor Karen Weaver Unveils 100 Day Plan

Flint, Michigan – December 1, 2015 – Mayor Karen Weaver today laid out the plan for her next 100 days in office at a morning press briefing held in the lobby of Flint City Hall. The Mayor's plan for the next 100 days will focus mainly on addressing issues related to water and lead, but will also include building a vigorous community engagement program, implementation of the City's Master Plan and increased attention to youth initiatives. The plan also lists restoring "Home Rule" to City government as a key objective.

"During the course of my campaign for this esteemed office, I made several pledges to the citizens of this community," said Mayor Weaver. "First and foremost I pledged that I would work tirelessly to resolve the City's water problems. I also made a pledge to work diligently to restore democracy and home rule, in addition to giving voice, truth and transparency to our residents." While there are other items the Mayor is interested in addressing, the next 100 days will focused on those areas.

In dealing with the water issues in Flint, Mayor Weaver is working toward having the City declared a Federal Disaster Area as her first item. "We are faced with the largest public health and public service threat in the history of the City," said the Mayor. "It will require resources far beyond our capabilities to remediate our water infrastructure problems." Mayor Weaver has already begun meeting with representatives and senators at both the State and Federal levels. In addition to the Federal Declaration, the Mayor is also seeking to restructure the City's Water Advisory Committee to include mayoral appointments, implementing a lead poisoning mitigation program in conjunction with local medical centers and expanding the Keep the Water Flowing program to include additional aid agencies.

Community engagement and the reestablishment of trust in local government will be vigorously sought by Mayor Weaver, as laid out in the 100 day plan. Beginning this month, the Mayor will conduct monthly Town Hall Meetings in each of the City's nine wards. In addition, the Mayor plans to attend block club and

neighborhood association meetings frequently, continue the Mayor's "Open Office" time on Wednesday mornings to hear from constituents and create a "Mobile City Hall" to provide direct access to the Mayor.

Another key to the Mayor's outreach strategy will be to meet frequently with various community stakeholders to gather input and reach out to educational institutions in an effort to gain insight into the problems facing Flint Through relationships with local colleges and universities, the Mayor hopes to develop surveys for such issues as specific as determining the scope of problems with the City's street lights and more general such as identifying citizen needs. Work is also being done through a university partnership to digitize old paper records of underground pipe materials to better track the location of lead-based service lines throughout the City.

Youth engagement is another part of the outreach strategy of the 100 day plan. Mayor Weaver is seeking to establish *Operation HYRE* (Helping Youth Reach Employment) in which she will call upon local businesses and vendors to provide summer employment opportunities for 500 City youth in 2016. The hope is to expand that year to year. In addition, the Mayor is seeking to form a Youth Advisory Council to provide opportunities for engagement in local government with students.

Mayor Weaver acknowledged that the ambitious scope of her plan will be rely on a spirit of cooperation within the community. "I am working every day to improve our quality of life," the Mayor stated. "Flint's stability depends on our collective effort to provide economic opportunity, promote healthy lifestyles, and ensure community prosperity. With our legendary Flintstone spirit we will prevail."

"The state much appreciated the opportunity to explain its role in regulating drinking water systems – in particular, the fact that the water supply presently meets all state and federal water quality standards but that homes with lead service connections and lead plumbing are and always have been imparting some part-per-billion of lead, which is a concern.

"We were pleased to conclude the meeting with the shared commitment to bring a local, state and federal partnership to address this issue through the City's technical advisory team. Given issues like the proposed federal grant forgiveness or the call for system-wide replacement of home lead connections to address the long-term issue, the leadership of our congressional delegation will be of critical importance."

Congressman Dan Kildee Calls For Additional "Independent and Scientific" Testing to Ensure Safety of Flint's Water

FLINT – Congressman Dan Kildee (MI-05) today, as part of his continued efforts to get answers regarding recent lead levels recorded in the city of Flint's water system, met with the Michigan Department of Environmental Quality (DEQ) and the Environmental Protection Agency (EPA) in Lansing.

The meeting followed a letter sent last week by Congressman Kildee posing various questions about recent lead levels in the water. In response to Congressman Kildee's letter, the DEQ and EPA invited Congressman Kildee and other local, state and federal elected officials to attend today's briefing in Lansing.

After the meeting today, Congressman Kildee issued the following statement:

"After meeting with the EPA and DEQ, it is clear to me that immediate independent and scientific testing is necessary to determine the safety of Flint's water. So far, the city, DEQ and EPA have not adequately answered my questions on their testing methods to ensure the safety of Flint's water.

"So far, I have been given no reason to have confidence in the current testing results. For example, it is unclear if homes sampled also took part in previous tests, which could have shown trends in water quality.

"I call on the Michigan Department of Environmental Quality and the Environmental Protection Agency, in coordination with the city of Flint, to work together to conduct additional independent and scientific testing of Flint's water. Additional testing must be expanded from its current scope to include more homes. It must also factor in the most at-risk homes in Flint.

"Flint residents deserve absolute transparency when it comes to the quality of their water. Additionally the city, DEQ and EPA must work together to ensure the immediate safety of Flint's drinking water, including any temporary relief until a long-term solution can be completed."

Oct. 1, 2015

Michigan leaders to announce action plan for Flint drinking water

Friday, Oct. 2 at 1:30 p.m.
Local, state and federal leaders will host a press conference to announce a comprehensive action plan for addressing drinking water concerns in Flint. Participants will include:

- Harvey Hollins, Director of the Office of Urban Initiatives for Gov. Rick Snyder
- Dan Wyant, Director for the Michigan Department of Environmental Quality
- Nick Lyon, Director for the Michigan Department of Health and Human Services
- Dr. Eden Wells, Chief Medical Executive for the Michigan Department of Health and Human Services
- Dayne Walling, Mayor of Flint
- Other local, state and federal officials

Location:
Kettering University, Innovation Center
1300 Bluff St.
Flint, MI 48504

This is a media event open to credentialed news media only. Media who plan to attend this event should RSVP by noon Friday. Contact Rosemarie Olszewski at 517-284-6700 or olszewskir@michigan.gov.

Flint Drinking Water Action Plan
Talking Points

Overall Messaging

- Repeated testing shows the water leaving Flint's drinking water system is safe to drink and meets all federal guidelines, including lead.
- After the switch the Flint River, the compliance testing protocol yielded results of 6 ppb in December 2014 and 11 ppb in June 2015. Both results were below the federal action level of 15 ppb.
- However, we recognize some residents experience higher levels of lead in the water that comes out of their faucets because of lead plumbing in the home, and that's a concern.
- Out of an abundance of caution, we want to address the needs of all Flint families, and so we have developed an action plan that includes both short- and long-term solutions.
- The state plan focuses on increasing water testing, offering additional precautions for families, and providing long-term solutions to address the city's water infrastructure.

Messaging regarding the action plan

The city and the state are working together to gather more data to ensure the water that leaves the treatment plant as well as the water that arrives in Flint homes is safe for all residents.

- **Immediately test Flint public schools to ensure that drinking water is safe. Testing will also be available at no cost to any other school in Flint.**
    - Although Flint's drinking water meets all federal requirements, the state wants to take extra steps to ensure that drinking water is safe for the city's children.
    - The state will fund this testing (about $30,000) at no cost to the city or the local schools, and make the results publicly available.

- **Expand health exposure testing of individual residences.**
    - To double-check its data as well as provide residents with an additional layer of assurance, the DEQ will conduct more tests at Flint properties.
    - The Technical Advisory Committee will determine the scope of this expanded testing.

- **Offer water testing at no cost to Flint residents to assure water is safe.**
    - Although all testing indicates water in the city of Flint meets all federal standards, we understand some residents are concerned.
    - To ensure water in individual homes is safe, free water testing is available to all Flint residents.
    - We encourage anyone with a concern to get their water tested.
    - Contact the city water department to have your water tested.

- **Begin optimizing corrosion controls in the Flint drinking water system.**

- A fully optimized corrosion control system can help coat the inside of pipes to minimize the amount of lead that enters the drinking water after it leaves the treatment plant.
- This is a helpful step that can help minimize lead system-wide, and we're pleased the city is moving to take this step.
- If asked: This was not initially required because a fully optimized corrosion control system is not federally required in many water systems. Even today, since Flint is meeting all federal standards, this fully optimized system is not required. However, to address public concerns and ensure every possible precaution is taken, the city is moving forward with installing this corrosion control system.

- **Convene a "Safe Drinking Water Technical Advisory Committee" to ensure the best technology, practices and science are being utilized, and add an expert from the EPA's Office of Research and Development to the group.**
  - The Safe Drinking Water Technical Advisory Committee will meet Oct. 7 to discuss fully optimizing the corrosion control system, expanding testing of at-risk properties, and other topics.
  - Tom Burke, the Deputy Assistant Administrator of EPA's Office of Research and Development as well as the EPA's Science Advisor, will participate on the committee. Prior to joining EPA, he held prominent positions at the Johns Hopkins Bloomberg School of Public Health and founded the Johns Hopkins Risk Sciences and Public Policy Institute. He brings substantial expertise, and we're pleased he is able join the committee.

- **Accelerate water system improvements to address replacement of lead service lines.**
  - Regardless of the drinking water source – whether it be DWSD, the Flint River or Lake Huron – the only permanent fix for lead is to replace all 18,000 of the private lead service lines in the city. These are the lines on private property that lead from the curb to individual homes.
  - This is a problem in communities statewide, and one we want to address with a long-term solution.
  - The state and EPA are working together to find a way for the city to access Drinking Water Revolving Loan funds for the work.

- **Expedite completion of Karegnondi Water Authority.**
  - The move to the Flint River was always a temporary measure until the connection to the KWA and to Lake Huron was completed.
  - This is the ultimate goal of the venture, and the state and locals will work together to speed up completion of the connection.

- **Governor Snyder names Dr. Eden Wells as Flint Drinking Water Public Health Advisor.**
  - Dr. Wells is the Director for the Preventive Medicine Residency at the University of Michigan School of Public Health in Ann Arbor as well as the Chief Medical Executive for MDHHS.

- She brings years of experience in epidemiology and preventative medicine to the issue, and we're thrilled to have her expertise.
- Dr. Wells will coordinate with Hurley Medical Center to share data on blood lead levels in children, as well as address other emerging issues.

- **Provide water filters to residents of Flint.**
  - As an additional precaution, water filters will be available to low-income families.
  - This provides another safeguard to ensure everyone in the city of Flint has access to clean drinking water that they feel confident drinking.

- **Expand a comprehensive lead education initiative.**
  - Lead plumbing is common in homes built prior to 1986, and anyone in the state with lead pipes in their home can take some extra precautions to minimize lead in their drinking water.
  - It takes time for lead to accumulate in drinking water from plumbing, and so flushing your pipes prior to using them can minimize your exposure.
    - To flush your pipes, run the water until it's as cold as it will go. This can take as little as 5 to 30 seconds if you have recently flushed the toilet or otherwise used water in your home, or as long as 2 to 5 minutes if you have not used any water in hours.
    - In the city of Flint, running the water for 5 minutes only costs about 3-16 cents, depending on your faucet.
  - Additionally, more lead gets into hot water than cold water. Use only cold water for drinking, cooking and making baby formula.

Michigan leaders announce action plan for Flint drinking water

Local, state and federal leaders today announced a comprehensive action plan for drinking water in Flint, designed to address both the short- and long-term needs of residents.

The action plan focuses on increasing water testing, offering additional precautions for families with lead plumbing in their homes, and providing long-term solutions to address the city's water infrastructure.

"We are deeply concerned by the lead results we are seeing in parts of Flint," Snyder said. "Although we know the water leaving Flint's drinking water system is safe to drink, some families with lead plumbing on their property experience higher levels of lead in the water that comes out of their faucets. We are concerned for those families, and we created this action plan to address their immediate needs as well as the long-term needs of all Flint residents."

The city and the state also are working together to gather more data to ensure the water that leaves the treatment plant as well as the water that arrives in Flint homes is safe for all residents. The plan includes:

- Immediately test Flint public schools to ensure that drinking water is safe. Testing also will be available at no cost to any other school in Flint.
- Expand health exposure testing of individual residences.
- Offer water testing at no cost to Flint residents to assure water is safe.
- Begin optimizing corrosion controls in the Flint drinking water system.

- Convene a "Safe Drinking Water Technical Advisory Committee" to ensure the best technology, practices and science are being utilized, and add an expert from the EPA's Office of Research and Development to the group.
- Accelerate water system improvements to address replacement of lead service lines.
- Expedite completion of Karegnondi Water Authority.
- Gov. Rick Snyder names Dr. Eden Wells as the Flint Drinking Water Public Health Advisor.
- Provide water filters to residents of Flint.
- Expand a comprehensive lead education initiative.

Local, state and federal leaders announced the plan at a press conference today at Kettering University's Innovation Center in Flint. Participants included:

- Harvey Hollins, Director of Snyder's Office of Urban Initiatives
- Dan Wyant, Director of the Michigan Department of Environmental Quality
- Nick Lyon, Director for the Michigan Department of Health and Human Services
- Dr. Eden Wells, Flint Drinking Water Public Health Adviser
- Dayne Walling, Mayor of Flint

"This action plan offers concrete steps we will take in a local, state and federal partnership to ensure all Flint residents have safe water to drink," Wyant said. "The DEQ will work closely with the city to gather further data to ensure the water that leaves Flint's system as well as the water that arrives in Flint homes is safe to drink."

To have your water tested, call 810-787-6537 and press 1, or email flintwater@cityofflint.com. For more information, visit www.michigan.gov/flintwater.

GROUPS PETITION EPA FOR EMERGENCY RESPONSE TO

FLINT, MI DRINKING WATER CONTAMINATION

City and state agencies have failed to fix the public health crisis that imperils children's health

CHICAGO (October 1, 2015) – In response to the ongoing drinking water crisis in Flint, Michigan, a coalition of local citizens and national groups petitioned the Environmental Protection Agency (EPA) today to take emergency action to secure safe, lead-free water for the City's children and families.

Flint-based Coalition for Clean Water, the American Civil Liberties Union of Michigan, and the Natural Resources Defense Council joined the petition to trigger the EPA to launch a comprehensive federal response to the ongoing crisis. Under the Safe Drinking Water Act, the EPA is empowered to stop "imminent and substantial endangerment to human health" such as the elevated lead levels in Flint's drinking water.

The petition urges that EPA immediately order the City and Michigan DEQ to reconnect Flint's water system with water from the Detroit Water and Sewerage Department, and to provide Flint residents with an alternative, free source of safe drinking water that meets EPA standards, among other requests.

"Neither the City of Flint nor the State of Michigan is doing enough to fix the problem of lead in our drinking water. As evidenced by the ongoing poisoning of the children of Flint, it's time for the EPA to take immediate action to provide us

with a safe water source," said LeeAnne Walters, a concerned parent from Flint and member of the Water You Fighting For, one of the organizations petitioning the EPA. "The city and state need to test for lead and copper as intended by the federal lead and copper rule," Walters added.

Highly corrosive water in the Flint River, the source of the City's drinking water, has been flowing through lead service lines in Flint's water system for more than a year. A medical study has confirmed that the number of children living in Flint with health-threatening elevated blood lead levels has risen since the City switched its water source. One study of Flint children under age five found that the proportion of children living in Flint with elevated blood levels has *doubled* since the City changed its drinking water source. The statistics are worse for younger children; those under fifteen months old had lead levels elevated 2.5 times greater after the switch to Flint River water.

The City of Flint and the state Department of Environmental Quality (DEQ) have been made aware of tap water monitoring results showing shockingly high lead levels in homes served by the City's drinking water system for months, but neither has taken the action necessary to meaningfully address the problem. There also appear to be serious issues with how the City was testing for lead in a way that appears to downplay the extent of the problem.

"Americans rightly believe that the water coming out of their taps should be safe, not exquisitely toxic. For more than a year, lead-contaminated drinking water has been flowing through Flint's pipes, faucets, and fountains. If the City and State will not address the issue, the EPA should step in to protect kids' health immediately," said Henry Henderson, Midwest Director for the Natural Resources Defense Council.

"Flint city officials, state-appointed emergency managers and the Michigan Department of Environmental Quality have all failed monumentally in their duty to provide the people of Flint with clean, safe drinking water. Now that the truth is revealed, further action is imperative," said Kary L. Moss, ACLU of Michigan executive director. "The devastating revelations from independent researchers, as well as our own nearly year-long investigation, demand an immediate, effective and comprehensive response. The EPA, along with and city officials, must exercise their full authority to guarantee that the people of Flint are protected from the hazardous water now flowing into their homes. The first step should be to overturn the emergency manager order and remove the Flint River as the city's source of water."

There is no safe level of lead exposure. The toxic effects of lead on virtually every system in the body, and particularly on the developing brains of young children, are well documented. It can also contribute to high blood pressure and other health problems in adults. Even low levels of lead in the blood have been shown to affect IQ, ability to pay attention, and academic achievement, effects that are irreversible.

Until Flint restores a safe drinking water source that meets EPA standards, residents are advised to take the following steps:

- Flush faucets by running water for a minimum of five (5) minutes prior to consumption;
- Use only cold water from taps for drinking and cooking, as warm or hot water is more likely to contain higher levels of lead;
- Install and use water filters that are certified to remove lead by NSF International (labeled as meeting "NSF Standard 53" for lead removal), and regularly change the filter cartridges; and
- Use only filtered or bottled water to prepare baby formula and food. Children, pregnant or nursing women should also use filtered or bottled water for drinking and cooking.

In addition, residents should consider taking the following additional steps where possible:

- Remove and clean individual faucet aerators, as lead particles and sediment can collect in the aerator screen located at the faucets;
- Contact a licensed plumber to replace any household plumbing that may contain lead; and

? Flush cold water taps after installing any new household pipes or fixtures.

Thank you. And here is a list of diverse leaders I recommend be invited to attend as space allows in addition to the federal and state legislators, Hollins's contacts and any state personnel or counterparts in Flint/Genesee

City Council President Josh Freeman, jfreeman@cityofflint.com 810-397-3797
City Council Vice-President Wantwaz Davis wdavis@cityofflint.com 810-391-7060
City Council Public Works Chairperson Jackie Poplar 810-397-3205
City Administrator Natasha Henderson nhenderson@cityofflint.com 810-766-7346
City of Flint Director of Public Works Howard Croft hcroft@cityofflint.com 810-766-7346
County Commission Chairman Jamie Curtis jcurtis@co.genesee.mi.us 810-444-6171
County Commission Vice-Chairman Bryant Nolden bnolden@co.genesee.mi.us 810-252-5170
County Drain Commissioner/KWA CEO Jeff Wright jwright@co.genesee.mi.us 810-287-1925
Flint Schools Superintendent Bilal Tawwab btawwab@flintschools.org 810-760-1000
GISD Superintendent Lisa Hagel (810) 591-4402 lhagel@geneseeisd.org
United Way CEO Jamie Gaskin (lead local partner on filters) jgaskin@unitedwaygenesee.org 810-240-0297
Greater Flint Health Coalition CEO Kirk Smith, ksmith@flint.org 810-877-5309
Flint & Genesee Chamber of Commerce CEO Tim Herman therman@flintandgenesee.org 810-691-5734
CS Mott Foundation Chairman Bill White/President Ridgway White rwhite@mott.org 810-614-5980
Mott Children's Health Center CEO Dr. Lawrence Reynolds LawrenceR@mottchc.org
Rev. Dr. Henry L. Fuller, Mt. Calvary Missionary Baptist Church and Wolverine State Convention President, 787-2563
Rev. Alfred Harris, President Concerned Pastors, revalharris1@hotmail.com 810-394-6787
Superintendent Quintin Marshall, President Genesee County Church of God in Christ Alliance, suptmarshall@att.net 810-280-8179

General Motors Communications, Tom Wickham tom.wickham@gm.com 248-707-9064

I also want to see if any of the officials would be willing to meet with a small group afterwards for discussion at the Greater Flint Health Coalition office. I think this could take place without any fanfare and the coalition can do those invites tomorrow mid-morning to include any of the above not able to be invited to the press conference and a few other key stakeholders such as hospital and university CEOs and medical community leaders.

Thank you for the consideration.
Dayne

Michigan leaders to announce action plan for Flint drinking water

Friday, Oct. 2 at 1:30 p.m.
Local, state and federal leaders will host a press conference to announce a comprehensive action plan for addressing drinking water concerns in Flint. Participants will include:
• Harvey Hollins, Director of the Office of Urban Initiatives for Gov. Rick Snyder
• Dan Wyant, Director for the Michigan Department of Environmental Quality
• Nick Lyon, Director for the Michigan Department of Health and Human Services
• Dr. Eden Wells, Chief Medical Executive for the Michigan Department of Health and Human Services
• Dayne Walling, Mayor of Flint
• Other local, state and federal officials

Location:
Kettering University, Innovation Center
1300 Bluff St.
Flint, MI 48504

This is a media event open to credentialed news media only. Media who plan to attend this event should RSVP by noon Friday. Contact Rosemarie Olszewski at 517-284-6700 or olszewskir@michigan.gov.

Michigan leaders announce action plan for Flint drinking water

Local, state and federal leaders today announced a comprehensive action plan for drinking water in Flint, designed to address both the short- and long-term needs of residents.

Gov. Rick Snyder, the Michigan Departments of Environmental Quality, and Health and Human Services, the Environmental Protection Agency, and the City of Flint released an~~The~~ action plan focuses on increasing water testing, offering additional precautions for families with lead plumbing in their homes, and providing long-term solutions to address the city's water infrastructure.

"We are deeply concerned by the lead results we are seeing in parts of Flint," Snyder said. "Although we know the water leaving Flint's drinking water system is safe to drink, some families with lead plumbing on their property experience higher levels of lead in the water that comes out of their faucets. We are concerned for those families, and we created this action plan to address their immediate needs as well as the long-term needs of all Flint residents."

The city and the state also are working together to gather more data to ensure the water that leaves the treatment plant as well as the water that arrives in Flint homes is safe for all residents. The plan includes:

- Immediately test Flint public schools to ensure that drinking water is safe. Testing also will be available at no cost to any other school in Flint.

- Expand health exposure testing of individual residences.
- Offer water testing at no cost to Flint residents to assure water is safe.
- Begin optimizing corrosion controls in the Flint drinking water system.
- Convene a "Safe Drinking Water Technical Advisory Committee" to ensure the best technology, practices and science are being utilized, and add an expert from the EPA's Office of Research and Development to the group.
- Accelerate water system improvements to address replacement of lead service lines.
- Expedite completion of Karegnondi Water Authority.
- Gov. Rick Snyder names Dr. Eden Wells as the Flint Drinking Water Public Health Advisor.
- Provide water filters to residents of Flint.
- Expand a comprehensive lead education initiative.

In addition to the action plan, zip code-level data does show that there has been an increase in elevated childhood blood lead levels in specific communities. Initial analysis of MDHHS data found that blood lead levels of children in Flint have followed an expected seasonal trend. While this analysis for Flint as a whole remains true, after a comprehensive and detailed review down to the zip code level, MDHHS data state analysis is consistent with that presented by Hurley Children's Hospital.

"While we cannot conclusively say that the water source change is the sole cause of the increase, this analysis supports our efforts as we take active steps to reduce all potential lead exposures in Flint," said MDHHS Director Nick Lyon. "As part of this, we are working closely with our public and private partners to provide Flint residents on MDHHS assistance programs with water filters and educate families about the steps they can take to reduce all lead exposures in their home."

MDHHS is making National Sanitation Foundation (NSF) certified water filters available to clients who are active Family Independence Program (FIP), Food Assistance Program (FAP), Child Development and Care (CDC) or Social Security Insurance (SSI) recipients.

Local, state and federal leaders announced the plan at a press conference today at Kettering University's Innovation Center in Flint. Participants included:

- Harvey Hollins, Director of Snyder's Office of Urban Initiatives
- Dan Wyant, Director of the Michigan Department of Environmental Quality
- Nick Lyon, Director for the Michigan Department of Health and Human Services
- Dr. Eden Wells, Flint Drinking Water Public Health Adviser
- Dayne Walling, Mayor of Flint

"This action plan offers concrete steps we will take in a local, state and federal partnership to ensure all Flint residents have safe water to drink," Wyant said. "The DEQ will work closely with the city to gather further data to ensure the water that leaves Flint's system as well as the water that arrives in Flint homes is safe to drink."

To have your water tested, call 810-787-6537 and press 1, or email flintwater@cityofflint.com. For more information, visit www.michigan.gov/flintwater.

I'm fine with these. Not sure what residents with concerns means for water filters though.

Hey Dave- We are currently working with retailers on pricing and the purchasing process. Based on where we are in those discussions, our partnerships with community organizations, and MDHHS emergency funds, we feel confident that Flint residents will have access to filters.

All,

Darnell Earley asked that I send you the draft of an OpEd regarding the Flint Water issue that he would like to send to the media this week.

He is seeking your input before sending, and is looking for any feedback you might have by tomorrow afternoon. He has intentionally placed it on his EM letterhead as he is still acting in the capacity of an EM.

Thank you.

Per Tom, you may also want to more directly note that DWSD **terminated** the contract with Flint, rather than to say "as the contract with DWSD expired in April 2014…" in the 5th paragraph.

Recent Tests Show Flint Water within EPA Guidelines

Flint, Michigan – February 27, 2015 – The Michigan Department of Environmental Quality (MDEQ) Testing lab has provided results to the City of Flint showing that test results for TTHM levels for the month of February are well within EPA guidelines for safe water. All eight testing sites showed levels of TTHM ranging between 14.9 and 28.5 micrograms per liter (μg/L), well below the Maximum Contamination Level of 80 (see chart below).

The testing results confirm the progress made by the City to address concerns regarding the safety of its water supply and corroborates findings by the City and independent tests by other organizations that the water today is safe. "Flint's water supply is meeting all safety guidelines set forth by the EPA," said DPW Director Howard Croft. "Today's findings by the MDEQ reinforce the progress we have made, and should help rebuild confidence in the safety of Flint's drinking water. We still have work to do to improve water quality and are committed to being vigilant to assure that water safety is maintained."

These results also show that the four month average for test results is now within EPA guidelines for five of the eight testing areas in the City. However, because EPA regulations require that the four month average for all testing sites be within guidelines, the City of Flint will still be considered to be out of compliance by MDEQ. The City expects to receive notice within the next few weeks indicating non-compliance, and system users can expect to receive official notice of non-compliance in the month of March.

Meanwhile, the City continues to work on maintaining water safety and improving water quality. While steps are being taken daily to improve quality, the City is expecting a formal set of recommendations from its water quality experts within the next few weeks.

The detail of the study results, a report of the progress being made and preliminary recommendations from Veolia will be shared with the newly formed Water Advisory Committee and Water Technical Committee, whose first meetings are scheduled for next week.

Subject: PRESS RELEASE: Emergency Manager Transition Update to City Council
Attachments: EM Update to City Council April, 2015.PDF; EM Transition Update Release 4.13.15.pdf

For Immediate Release

EM Updates Council, Requests support for Emergency Loan and District Court Consolidation; Adjusts Salaries for Mayor and Council

Flint, Michigan – April 13, 2015 – By letter to City Council issued today, Emergency Manager Jerry Ambrose congratulated City Council for their recent actions committing to restoring and maintaining the City's financial solvency. Mr. Ambrose stated that recent actions to adopt a series of ordinances requiring commitment to establishing appropriate financial reserves and an improved planning and budgeting process indicate that the Council understands the need to restore and maintain Flint's financial solvency. "While there is much yet to do, these are positive steps in the right direction," said Mr. Ambrose. "The ongoing challenge will be to adhere to the requirements the City Council has adopted themselves."

Mr. Ambrose's letter also reiterated the priority issues currently facing the City – developing a long range financial plan, beginning with the upcoming FY16 and FY17 budget; continuing to address concerns with water safety, quality and affordability; and stabilizing resources for public safety. "These are clearly the top priority issues, and ones which require the cooperation of all if they are to be successfully addressed," stated Mr. Ambrose. "Unfortunately, resources are extremely limited, and we must make decisions which address the most critical issues in a financially sound manner – and that often means we cannot do everything everybody wants."

Some of the ingredients of restoring Flint's financial solvency on a sustainable basis, according to Mr. Ambrose, include obtaining a $7 million loan to finance the accumulated General Fund deficit and approving the consolidation of the 67th and 68th District Courts. Both issues are pending before City Council and Mr. Ambrose is hopeful for a quick positive response. "The terms and conditions offered with this loan equate to a good deal for the City and will enable it to begin to more quickly rebuild its financial solvency. Approving the court consolidation will reduce City expenses by $8.4 million over the next 10 years and will help to provide some stability in funding other public safety services."

Mr. Ambrose also presented Council with actions he is taking to continue the progress towards transition, including an updated purchasing ordinance and an order officially defining the role of the new City

Administrator as the chief administrative officer for the City. "Moving the City forward in today's environment requires professional managers, clear responsibilities, and modern practices," said Ambrose. "These actions move in that direction, and hopefully move the Council forward in truly becoming the governing body of the City, focused on policies and accountability for moving the City forward based on its vision, mission, and goals."

Recognizing the increasing role of the Mayor and Council as the City transitions to home rule with oversight by a Receivership Transition Advisory Board, Mr. Ambrose announced that he is reestablishing the salaries for Mayor and Council at the levels in place before the City was most recently placed into state receivership. He noted that Council meetings are now held twice per month, with committee meetings held once per month, and the Mayor is now much more engaged in a Chief Executive role. Continued receipt of the re-established salaries, however, will be contingent upon attainment of certain training levels. These training levels were established in prior orders of the Emergency Manager, and Councilmembers will have until November 1, 2015 to obtain it, or their salary will be reduced to the current level.

CITY OF FLINT

OFFICE OF THE EMERGENCY MANAGER

Gerald Ambrose
Emergency Manager

TO: Josh Freeman, President, Flint City Council

From: Jerry Ambrose, Emergency Manager

Cc: Flint City Council
Mayor Dayne Walling
Natasha L. Henderson, City Administrator

DATE: April 13, 2014

RE: Update and Transition Progress

Thank you for your consideration of my request for authorization to apply for the $7 million loan from the State's Emergency Loan Board. This loan, if approved, will be used to eliminate the City's General Fund deficit ahead of the schedule in our current Deficit Elimination/Reserve Accumulation Plan. This will enable the City to move forward with building adequate reserves necessary to foster financial stability. This, along with the commitments established in ordinance to develop and maintain a multi-year budget based on a strategic plan and to address the funding of long term liabilities, Flint's financial solvency can be sustainable.

Thank you also for your consideration of the proposed consolidation of the 68th and 67th District Court, an action which has been long in the making. Recommended by the State Court Administrators Office and authorized by state law, the consolidation is planned to become effective January 2, 2016. The Memorandum of Understanding, approved today by the Genesee County Board of Commissioners, details the advantages the consolidation will have for the City of Flint. The city will see a reduction in costs of more than $8.4 million over the first 10 years, providing some much needed funds to support police services. Additionally the new court division is assured of at least 2 probation officers, something which the Court has not had for several years. And, as provided in both law and the agreement, judges will continue to be elected from within the City.

As you know, my focus over the past few months has been and continues to be transitioning the City from oversight by an Emergency Manager to home rule under the guidance of a Receivership Transition Advisory Board.

Much progress has been made in preparing for the transition, including action by the City Council to complete the following:

- Final adoption of the Capital Improvements Plan
- Final adoption of ordinances regarding planning, budgeting, funds balance, and deficit elimination
- Update of the Strategic Plan's Vison, Mission, and Goals
- Adoption of budget priorities to guide development of the FY16/FY17 budget

Additionally, our new City Administrator Natasha Henderson is on board and is assuming duties as the experienced and professionally trained chief administrative officer for the City.

There are several issues which we are continuing to address, including:

- Water safety, quality, and affordability continues to be a top priority. The City's water supply today is safe, as measured by the same MDEQ standards that have been in place for years, and steps are being taken to improve treatment and distribution processes in order to address issues of discoloration and odor, and to assure continued safety. Reviews of our pricing structure are also underway to assure that customers are treated equitably while generating sufficient revenue to operate the system.

  Public safety continues to be an area of critical concern. The independent study of our police and fire organization provided a number of recommendations focused on how to best deploy the resources we have, and also confirmed that the staffing levels afforded by our limited resources are extremely low in comparison to comparable municipalities. This emphasizes the critical continuing importance of renewing the two voter-approved public safety millages and working to assure continuing state support through the assignment of state troopers and through financial support of the City lock-up. Loss of any of this support would be a disaster for the City.

- Achieving and then maintaining financial stability will continue to require constant attention. Approval of the ordinances regarding financial stability and the anticipated approval of the $7 million loan provide additional tools with which to work. Attention will need to be paid to not only developing and adopting budgets for FY16 and FY17 but doing so in the context of understanding the impact of those budgetary decisions into the following three years. Essential to this is making the budget decisions which truly address achievement of the stated vison, mission and goals for the City as adopted by the City Council. Unfortunately, the challenges in doing so will be great, as the City will continue to be faced with the reality of a structural deficit, where for the foreseeable future current expenditure patterns exceed revenue streams – a difficult position, given the City's already low level of services. Complicating this further is the potential impact of the retiree health care lawsuit, once the final outcome is decided.

- Finally progress continues with modernizing the operations of the City and setting the framework for future development. With the Master Plan and Capital Improvement Plan in place, focus is now turning to implementation, including updating the Zoning Ordinance.

As we move forward with preparing for transition, there is much work yet to do. Today I am taking three actions consistent with our path:

- Adoption of an updated purchasing policy – I am enacting the revisions to the Purchasing policy which were reviewed by Council within the past few months. These changes are made with the goal of assuring that the process of obtaining goods and services is consistent with the expectations of the Strategic Plan. There must be proper oversight and transparency, with a goal of obtaining goods and services that best meet the needs of City departments. The process must ensure competitive procurement, conducted in a timely and ethical manner. The City Council has an important role in assuring compliance with the policy, which is not the same as conducting purchasing operations.

- Confirming the role of the City Administrator – Before the search for a new City Administrator was begun, it was determined, within the context of the Seven Point Transition Plan, that an experienced and professional City Administrator would be selected on the basis of an open competitive process, and that the duties of the City Administrator would be structured in a manner which assures the ability to manage and direct the administrative affairs of the City in a professional manner. While those duties and expectations were described in the job description of the City Administrator and in recruitment materials, I am now formally enacting them in Emergency Manager Order Number 3.

- Re-establishing salaries for Mayor and Council – As we are moving towards transition, the duties and responsibilities of the Mayor and City Council are expanding towards the traditional roles of a City operating under home rule. Council meetings are now held twice per month, with committee meetings held once per month. The Mayor is now much more engaged in a Chief Executive role. Consequently, I have determined to re-establish the salaries for Mayor and Council at the levels in place immediately prior to the appointment of an Emergency Manager in November, 2011. Continued receipt of the re-established salaries, however, is contingent upon attainment of certain training. The re-established levels, and the contingency regarding training, is found in Emergency Manager Order Number 4.

Over the next several weeks, there will be much work with respect to finalizing the loan application and developing the FY16 and FY17 budgets along with FY18, FY19, and FY20 projections. Work will also continue with implementing improvements of the water system, and reviewing our associated rate structure. Evaluation and implementation of the recommendations for best use of

police and fire resources will continue, including corrective action for the police evidence room issues. Summer street maintenance and repair programs, as well as sidewalk repairs will soon be underway. Public meetings regarding the zoning ordinance are being held, with a recommended updated ordinance expected for consideration in late spring. A revision to the City's business licensing ordinance is expected soon. These are but a few of the many activities to be expected as the City makes the best use of its resources to provide the best level of service it can within the resources it has.

I look forward to working with you as we move towards transition to home rule under the guidance of a Receivership Transition Advisory Board. Please contact me if you have any questions.

EM Updates Council, Requests support for Emergency Loan and District Court Consolidation; Adjusts Salaries for Mayor and Council

Flint, Michigan – April 13, 2015 – By letter to City Council issued today, Emergency Manager Jerry Ambrose congratulated City Council for their recent actions committing to restoring and maintaining the City's financial solvency. Mr. Ambrose stated that recent actions to adopt a series of ordinances requiring commitment to establishing appropriate financial reserves and an improved planning and budgeting process indicate that the Council understands the need to restore and maintain Flint's financial solvency. "While there is much yet to do, these are positive steps in the right direction," said Mr. Ambrose. "The ongoing challenge will be to adhere to the requirements the City Council has adopted themselves."

Mr. Ambrose's letter also reiterated the priority issues currently facing the City – developing a long range financial plan, beginning with the upcoming FY16 and FY17 budget; continuing to address concerns with water safety, quality and affordability; and stabilizing resources for public safety. "These are clearly the top priority issues, and ones which require the cooperation of all if they are to be successfully addressed," stated Mr. Ambrose. "Unfortunately, resources are extremely limited, and we must make decisions which address the most critical issues in a financially sound manner – and that often means we cannot do everything everybody wants."

Some of the ingredients of restoring Flint's financial solvency on a sustainable basis, according to Mr. Ambrose, include obtaining a $7 million loan to finance the accumulated

–CONTINUE–

General Fund deficit and approving the consolidation of the 67th and 68th District Courts. Both issues are pending before City Council and Mr. Ambrose is hopeful for a quick positive response. "The terms and conditions offered with this loan equate to a good deal for the City and will enable it to begin to more quickly rebuild its financial solvency. Approving the court consolidation will reduce City expenses by $8.4 million over the next 10 years and will help to provide some stability in funding other public safety services."

Mr. Ambrose also presented Council with actions he is taking to continue the progress towards transition, including an updated purchasing ordinance and an order officially defining the role of the new City Administrator as the chief administrative officer for the City. "Moving the City forward in today's environment requires professional managers, clear responsibilities, and modern practices," said Ambrose. "These actions move in that direction, and hopefully move the Council forward in truly becoming the governing body of the City, focused on policies and accountability for moving the City forward based on its vision, mission, and goals."

Recognizing the increasing role of the Mayor and Council as the City transitions to home rule with oversight by a Receivership Transition Advisory Board, Mr. Ambrose announced that he is reestablishing the salaries for Mayor and Council at the levels in place before the City was most recently placed into state receivership. He noted that Council meetings are now held twice per month, with committee meetings held once per month, and the Mayor is now much more engaged in a Chief Executive role. You probably don't want us running Treasury, Chief.

Heads up that EPA Region V Administrator Hedman (author of the letter to Kildee) is in Flint today, talking about brownfields (and getting a lot of questions about water).

Kildee appears to have been too busy to announce he got that formal reply from EPA. However, apparently a few reporters had obtained a copy of it and inquired about it when the pair were in Flint.

City of Flint Statement Regarding U.S. District Court Order Denying Motion for Preliminary Injunction.

Flint, Michigan – June 23, 2015 – The United States District Court of Eastern Michigan, Southern Division has today issued an order denying a motion for preliminary injunction in the case of Coalition for Clean Water vs. City of Flint. The injunction, which sought an order to force the City of Flint to accept the Detroit Water and Sewerage Department's offer to provide water for the City, was denied by U.S. District Judge Stephen J. Murphy, III who stated that "the Court is unable to determine the Coalition's legal theory, or even whether the Court has the power to grant the requested relief."

In response, City Attorney Pete Bade said "we are pleased with the Court's decision on this matter." The City Attorney's office has also today filed a motion for summary judgment from the court seeking dismissal of the action in its entirety.

DEFENDANTS' MOTION TO DISMISS PURSUANT TO FED. R. CIV. P. 12(b)(1) and (6)

ORAL ARGUMENT REQUESTED

Defendants City of Flint and City of Flint Administrator Natasha Henderson, by and through their attorneys, hereby move that this Court dismiss this Plaintiff's Complaint for lack of subject matter jurisdiction and failure to state a claim upon which relief can be granted. As such, Defendants are entitled to dismissal as a matter of law, pursuant to Fed. R. Civ. P. 12(b)(1) and Fed. R. Civ. P. 12(b)(6). For the reasons set forth in the attached brief, Defendants respectfully request that this Court grant this motion.

Concurrence in the relief sought in this Motion was requested from Plaintiff's counsel on June 22, 2015. Concurrence was not granted.

Respectfully submitted by

/s/ Anthony Chubb

STATEMENT OF ISSUES PRESENTED

1) Should Count I and II of Plaintiff's Complaint be dismissed for a lack of subject matter jurisdiction pursuant to Fed. R. Civ. P. 12(b)(1)?

   Defendants' answer "Yes."

   Plaintiff's answer "No."

2) Should all Counts of Plaintiff's Complaint be dismissed for failure to state a claim upon which relief can be granted?

   Defendants' answer "Yes."

   Plaintiff's answer "No."

CONCISE STATEMENT OF THE REASONS AND AUTHORITY SUPPORTING MOTION

Defendants seek dismissal of Plaintiff's claims because Plaintiff has failed to meet the statutory notice requirements for its claims, has failed to allege the specific statutory or regulatory violations, and has pled claims under §1983 that are precluded by the Safe Drinking Water Act. Defendants rely upon the following controlling and/or persuasive authority:

BRIEF IN SUPPORT OF DEFENDANTS' MOTION TO DISMISS PURSUANT TO FED. R. CIV. P. 12(B)(1) AND (6)

I. INTRODUCTION

This is a civil suit for declaratory and injunctive relief pursuant to the Safe Drinking Water Act (hereinafter "SDWA"), 42 U.S.C. §300f *et seq.*, as well as for monetary damages pursuant to 42 U.S.C. §1983. Plaintiff is a non-profit organization allegedly organized under Michigan law. Defendants are the City of Flint (hereinafter "Flint"), a municipal corporation organized pursuant to the Michigan Home Rule City Act, and Natasha Henderson, City Administrator (hereinafter "City Administrator") for the City of Flint, in her official capacity.

In lieu of filing an Answer, Defendants move for dismissal of all counts of Plaintiff's Complaint. First, Plaintiff has failed to satisfy the statutory notice requirements of 42 U.S.C. §300j-8(2), and the Court therefore lacks subject matter jurisdiction over claims in Counts I and II. Dismissal of Counts I and II is therefore warranted pursuant to Fed. R. Civ. P. 12(1) and required by Fed. R. Civ. P. 12(h)(3).

In addition, the allegations in Counts I and II of Plaintiff's Complaint fail to identify the statutory or regulatory requirement allegedly violated by Flint or the City Administrator, while the allegations in Counts III and IV of Plaintiff's Complaint are precluded by the SDWA as parallel constitutional claims. Plaintiff has thus failed to state a claim under which relief can be granted and dismissal is warranted pursuant to Fed. R. Civ. P. 12(b)(6).

II. BACKGROUND

The City of Flint owns and operates a water distribution and treatment system. Prior to 2014, the City of Flint purchased its water from the City of Detroit, which sourced its water from Lake Huron. In April of 2014, Flint stopped purchasing water from the City of Detroit and began utilizing the Flint River as its primary source of water. Due to unexpected challenges of treating

river water, Flint failed to pass Environmental Protection Agency (EPA) water quality tests in May, August, and November of 2014. Flint has since passed the EPA water quality tests in February and May of 2015, but continues to send out notices as required, since the average test results over the previous year remain out of compliance.

III. ARGUMENT

A. STANDARDS OF REVIEW

1. Fed. R. Civ. P. 12(b)(1)

A Rule 12(b)(1) motion to dismiss tests whether the Court has subject matter jurisdiction over the claims in Plaintiff's Complaint. Fed. R. Civ. P. 12(b)(1). A court that lacks subject matter jurisdiction over a case must dismiss that case. Fed. R. Civ. P. 12(h)(3). The plaintiff has the burden of proving subject matter jurisdiction. *Moir v. Greater Cleveland Regional Transit Auth.*, 895 F.2d 266, 269 (6th Cir. 1990); *Rogers v. Stratton Indus., Inc.*, 798 F.2d 913, 915 (6th Cir. 1986).

12(b)(1) motions are either factual or facial attacks. *United States v. Ritchie*, 15 F.3d 592, 598 (6th Cir. 1994). Facial attacks challenge the pleading itself, and are resolved under the same standard as a 12(b)(6) motion (i.e.. all well-pleaded allegations are accepted as true and construed in the light most favorable to the non-movant). *Id.* A factual attack, in contrast, challenges the factual existence of subject matter jurisdiction. *Id.* With a factual attack, the court does not presume the truth of the allegations and is free to "weigh the evidence and satisfy itself as to the existence of its power to hear the case." *Id.*

2. Fed. R. Civ. P. 12(b)(6)

A Rule 12(b)(6) motion to dismiss tests whether the well-pleaded allegations in the Plaintiff's Complaint state a claim under which relief can be granted. Fed. R. Civ. P. 12(b)(6). The Complaint must allege "sufficient facts that, accepted as true, 'state a claim to relief that is

plausible on its face.'" *Sutton v. Metro. Gov't of Nashville and Davidson Cnty.*, 700 F.3d 865, 871 (6th Cir. 2012) (*citing Bell Atlantic Corp. v. Twombly*, 550 U.S. 544, 570 (2007)). "A claim has facial plausibility when the . . . plead[ed] factual content allows the court to draw the reasonable inference that the defendant is liable for the misconduct alleged." *Ashcroft v. Iqbal*, 556 U.S. 662, 678 (2009).

Rule 8(a)(2) requires that a Complaint contain "a short a plain statement of the claim showing that the pleader is entitled to relief." Fed. R. Civ. P. 8(a)(2). This standard, while not requiring "detailed factual allegations," does require more than "labels and conclusions" or "a formulaic recitation of the elements of a cause of action." *Bell Atlantic Corp. v. Twombly*, 550 U.S. 544, 555 (2007). Conclusory allegations are not entitled to the assumption of truth. *Iqbal,* at 679; *see Eidson v. Tenn. Dep't of Children's Servs.*, 510 F.3d 631, 634 (6th Cir. 2007) ("Conclusory allegations or legal conclusions masquerading as factual allegations will not suffice.").

B. DISMISSAL OF COUNTS I AND II IS WARRANTED BECAUSE PLAINTIFF HAS FAILED TO SATISFY THE NOTICE REQUIREMENT OF 42 U.S.C. §300J-8(2) AND THE COURT THEREFORE LACKS SUBJECT MATTER JURISDICTION OVER THOSE COUNTS

The SDWA creates a civil cause of action against any person, including a governmental instrumentality, alleged to be in violation any requirement prescribed by or under the SDWA. 42 U.S.C. §300j-8(a)(1). However, the SDWA prohibits this civil cause of action unless the plaintiff has given notice of such violation to the Administrator of the Environmental Protection Agency (EPA), the alleged violator, and the State in which the violation occurs. 42 U.S.C. §300j-8(b)(1). Failure to give such notice deprives the Court of subject matter jurisdiction. *See Hallstrom v. Tillamook County*, 493 U.S. 20, 32 (1989) (holding that failure to comply with an identically worded provision in the Resource Conservation and Recovery Act acted as a total bar to suit);

see also Curtis v City of Bullhead, 69 Fed. Appx. 377 (9th Cir 2003) (upholding dismissal of SDWA claims due to lack of subject matter jurisdiction resulting from insufficient notice).

Counts I and II allege violations of the SDWA. Plaintiff has utterly failed to allege the required notice to any of the three persons listed in subsection (b)(1). Furthermore, on information and belief, Plaintiff has not only failed to *allege* that such notice was provided, but has in fact failed to *provide* such notice. Defendants thus factually attack the Court's subject matter jurisdiction in this matter. Since Plaintiff bears the burden of proving subject matter jurisdiction, Plaintiff must show that the proper notice was given to all three of the persons named in subsection (b)(1). Absent such a showing, a civil action in this matter will be barred by statute, the Court will lack subject matter jurisdiction, and dismissal of Counts I and II is required pursuant to Rule 12(h)(3).

C. EVEN IF SUBJECT MATTER JURISDICTION IS SOMEHOW ESTABLISHED, DISMISSAL OF COUNTS I AND II IS ALSO WARRANTED BECAUSE PLAINTIFF'S COMPLAINT FAILS TO ALLEGE A VALID CAUSE OF ACTION

A civil action pursuant to the SDWA must allege a violation of a requirement of or under the SDWA. 42 U.S.C. §300j-8(a)(1). While Counts I and II of Plaintiff's Complaint allege that "the City has violated the Safe Drinking Water Act," such an allegation is the essence of a "formulaic recitation of the elements of a cause of action." Nowhere does Plaintiff allege which specific regulation or statutory provision of the SDWA has been violated. Under the Federal pleading standard, simply alleging a variety of purported errors or misdeeds is insufficient – the purported errors or misdeeds must constitute a violation of a specific provision of the SDWA. *See Twombly*, 550 U.S. at 555. Plaintiff's allegations of a violation of the SWDA are purely conclusory and not entitled to acceptance by the Court.

The insufficiency of Plaintiff's allegation of a violation is further illustrated by comparing them with the promulgated regulations on notice. Federal regulations require that:

> "Notice regarding an alleged violation of any requirement prescribed by or under the Act shall include sufficient information to permit the recipient to **identify the specific requirement alleged to have been violated**, the activity alleged to constitute a violation, the person or persons responsible for the alleged violation, the location of the alleged violation, the date or dates of the alleged violation, and the full name, address, and telephone number of the person giving notice."

40 CFR 135.12(a) (emphasis added). This regulation creates the rule for sufficient notice of an alleged SWDA violation. Plaintiff's allegations do not meet this standard, and Plaintiff should be held to no lesser standard in a civil action. Plaintiff has thus failed to state a claim upon which relief can be granted. Dismissal of Counts I and II of Plaintiff's Complaint is therefore also warranted pursuant to Fed. R. Civ. P. 12(b)(6).

D. DISMISSAL OF COUNTS III AND IV IS WARRANTED BECAUSE THE SDWA IS A COMPREHENSIVE REMEDIAL SCHEME PRECLUDING PARALLEL CONSTITUTIONAL CLAIMS AND PLAINTIFF HAS THEREFORE FAILED TO STATE A CLAIM ON WHICH RELIEF CAN BE GRANTED

The Supreme Court of the United States has determined that a civil rights claim pursuant to 42 U.S.C. §1983 may be precluded by other Federal statutes. *Smith v Robinson*, 468 U.S. 992, 1009 (1984). To preclude a §1983 claim, the claims under both §1983 and the other Federal statute must be "virtually identical," and the other Federal statute must provide a scheme of remedies comprehensive enough to be exclusive. *Id.* Both conditions must be satisfied in order for a §1983 claim to be precluded. *Id.* The Sixth Circuit has not yet addressed whether the SDWA's civil cause of action precludes parallel claims under §1983.[1] However, the First Circuit

[1] The Sixth Circuit has determined that the whistleblower protections of the SDWA do not preclude a parallel §1983 claim for violations of First Amendment civil rights. *Charvat v. E. Ohio Reg'l Wastewater Auth.*, 246 F.3d 607, 614-

has examined this issue in detail and concluded that the SDWA preempts parallel §1983 claims. *Mattoon v. City of Pittsfield*, 980 F.2d 1, 5-6 (1st Cir. 1982). The First Circuit's analysis is sound and instructive.

The Supreme Court has held that §1983 suits can be precluded by other similar federal statutes. *See Middlesex County Sewarage Auth. v. Nat'l Sea Clammers Ass'n*, 453 U.S. 1, 20 (1981) (holding that §1983 claims are precluded by the Federal Water Pollution Control Act and the Marine Protection, Research, and Sanctuaries Act). In *Matoon*, the First Circuit held that, similar to the statutes examined in *Sea Clammers*, the SDWA (1) establishes an elaborate enforcement scheme, with rights of action on both government and private citizens; (2) civil actions can result in compelled compliance, compliance orders, and civil penalties; (3) states are invested with primary enforcement authority after the Administrator of the EPA determines that the state has adopted sufficient regulations and procedures; (4) private actions are allowed pertaining to the nationwide regulations and standards; and (5) citizens may initiate proceedings against violators as well as against the Administrator for failure to perform non-discretionary duties. *Mattoon* at 5-6. Using this analysis, the SDWA clearly provides a comprehensive scheme of remedies that should be considered exclusive.

The only remaining question is whether Plaintiff's claims under §1983 are "virtually identical" to their claims under the SDWA. Counts III and IV of Plaintiff's Complaint request that the Court "find that Plaintiffs (sic) have a liberty or property interest in safe drinking water, that Defendants have violated that right without due process of law . . ." Pl. Compl. at 16, 18. In comparison, Counts I and II of Plaintiff's Complaint ask the Court for a declaratory judgment in

---

615 (6th Cir. 2001). However, the analysis was particular to the whistleblower section of the SDWA, 42 U.S.C. §300j-9, which is different from that of the civil action section relevant to this case. *See* 42 U.S.C. §300j-8.

regards to the alleged lack of safe drinking water provided by Flint, and injunctive and/or declaratory relief as regards to the same. Pl. Compl. at 13-15.

Except for artfully pleading a constitutional claim, Plaintiff's §1983 claims in Counts III and IV and its SDWA claims in Counts I and II are clearly identical, as both revolve around the alleged failure of Flint to provide safe drinking water to Plaintiff. The SDWA clearly provides a comprehensive remedial scheme. Counts III and IV of Plaintiff's Complaint fail to state a claim on which relief can be granted, because Plaintiff's §1983 claims are precluded by the SDWA. Dismissal of Counts III and IV is therefore warranted pursuant to Fed. R. Civ. P. 12(b)(6).

IV. CONCLUSION

Plaintiff's failure to provide the notice required by the SDWA deprives the Court of subject matter jurisdiction over Counts I and II, and dismissal of those counts, pursuant to Fed. R. Civ. P. 12(b)(1) is therefore required by Fed. R. Civ. P. 12(h)(3). In addition, Counts I and II fail to state a claim on which relief can be granted because they fail to allege which specific statutory or regulatory requirements were violated, warranting dismissal of Counts I and II pursuant to Fed. R. Civ. P. 12(b)(6). Counts III and IV are parallel Constitutional claims that are precluded by the SDWA and Plaintiff has failed to state a claim on which relief can be granted, warranting dismissal of those counts pursuant to Fed. R. Civ. P. 12(b)(6).

Respectfully submitted by

Just a heads up, our Drinking Water Staff closing the loop with one of the participants from the meeting with the Flint Ministers regarding water quality issues in Flint. Some very worthwhile information here, and a heads up to everyone that this letter will be going to this individual.
Let me know if you have further questions, concerns, or other issues. Thanks!

Brad – below is our draft response to Ms. Walters in followup to our meeting at the Governor's Office. Thought you might like to review the draft before we send it out. Also, is there anyone else that should see this before it is sent?

Dear Ms. Walters,

I wanted to update you regarding our Department's findings related to questions raised during our meeting at the Governor's office on August 4. I apologize for the delay in getting back to you.

Lead and Copper Monitoring

Regarding Flint lead and copper compliance monitoring for the January – June 2015 period, the City has confirmed that all lead and copper samples collected throughout the City, whether routine sites or customer requests, were sent to the State of Michigan lab for analysis. Individual sample results are provided to the property owner within 30 days of receiving the lab results in accordance with the Michigan Safe Drinking Water Act (Public Act 399, 1976 Administrative Rule 410(5). Results from the State of Michigan lab are provided directly to our Office.

Staff have confirmed that the lead 90th percentile compliance calculation of 11 parts per billion is based on 69 samples that met the appropriate sampling location site criteria, and met the sample collection site and collection protocol requirements of the Safe Drinking Water Act for this monitoring period. A minimum of 60 samples were required for this monitoring period. As indicated during the meeting, the City's sampling for lead complies with the Action Level

standard of 15 parts per billion, but based on the population served by the City and these results, the City will need to make a recommendation to the MDEQ on how they will fully optimize their corrosion control treatment. These next steps continue to follow the requirements of the Lead and Copper Rule.

Samples collected at your residence of **PPI** were not included this compliance determination as you utilize a whole home filter. As stated in the Michigan Safe Drinking Water Act (Public Act 399, 1976 Administrative Rule 710a, Lead and Copper in tap water; monitoring requirements) "Sampling sites may not include faucets that have point of use or point of entry treatment devices designed to remove inorganic contaminants." Such treatment alters the water chemistry and water quality such that it is no longer representative of public water from the City's distribution system. Therefore, the City cannot use samples collected at your residence as part of its determination for public water system compliance with the lead or copper action level standard.

Sample Summary (samples taken at your residence)

For your information, we are providing the information that we've gathered regarding samples collected at your home. Our records indicate between February and June of this year there were six samples collected by either you or Mr. Mike Glasgow with the City of Flint, and submitted to the State Laboratory for analysis as follows:

February 11, Bathroom tap, collected at 10:20 AM by Mike Glasgow. This sample was analyzed for aesthetic metals (copper, iron, manganese, and zinc) which does not include lead analysis.

February 18, Kitchen tap, collected at 7:15 AM by you. This sample was analyzed for lead (104 parts per billion) and copper (non-detect).

February 25, Kitchen tap, collected at 10:26 AM by Mike Glasgow. This sample was analyzed for metals including lead. All results (including lead) were non-detect except for Barium 0.01 parts per million. The result for Barium was well below its maximum contaminant level of 2 parts per million.

March 3, Kitchen tap, collected at 6:00 AM by you. This sample was analyzed for lead (397 parts per billion) and copper (non-detect).

March 18, Kitchen tap, collected at 11:10 AM by Mike Glasgow. This sample was analyzed for lead (4 parts per billion) and copper (non-detect).

April 2, Pre-point of service, collected at 8:00 AM by you. This sample was analyzed for lead (707 parts per billion) and copper (110 parts per billion).

Lead Education/Outreach

As we discussed during the meeting, we support efforts to educate homeowners about the sources of lead in their private residence, provide guidance measures to reduce the potential for lead exposure, and provide information on resources for lead abatement. Along those lines, our Office has been in contact with the Department of Health and Human Services, Environmental Health Division, Healthy Homes Section and had some preliminary discussions about a public education and assistance campaign regarding household lead issues, guidance and abatement.

Lead monitoring by public water systems serves a dual purpose. The first purpose is to ensure the public water supply is adequately treating its water to address corrosion potential and help limit lead exposure. The second purpose is to inform homeowners about lead levels within their individual residence so that they can make educated choices regarding their own exposure risk.

pH Results

During the meeting concerns were also expressed regarding pH levels within customer plumbing systems. As you may know, pH has no associated contaminant level as it is simply a numeric scale used to specify the acidity or alkalinity of a solution. The City of Flint conducts daily monitoring of pH values on both its raw and finished (treated) water at the City's water treatment plant as part of its operations. The City is also required to conduct water quality parameter monitoring in the distribution system, which includes pH. Samples are analyzed in accordance with Standard Methods using properly calibrated analytical equipment. Results for pH from these samples are summarized below.

Since late April 2014 – June 2015, the following pH conditions were reported:

Water Treatment Plant – Finished Water plant tap pH range = 7.07 minimum to 9.9 maximum, overall average 7.7, measured daily. We believe the 9.9 is a one- time anomaly from softening treatment.

Distribution System – Water Quality Parameters taken from 25 sample sites located throughout and monitored quarterly
July – Sept. 2014: pH 7.71 average, range 7.56 – 7.86
Oct. – Dec. 2014: pH 7.88 average, range 7.62 – 8.10
Jan. – March 2015: pH 7.81 average, range 7.60 – 7.99
April – June 2015: pH 7.63 Average, range 7.48 – 7.80

In addition, the City's treated water contains alkalinity, which is a measurement of the buffering capacity of water to resist a change in pH. As you can see from the water quality parameter monitoring results above there has been very little change in pH within the City's distribution system. The pH levels described within customer site piping or premise plumbing systems are believed to be the result of onsite treatment and not representative of water quality shown to be occuring in the public water supply system.

Consumer Confidence Report

Finally, there was confusion during the meeting regarding the City's annual water quality report, the Consumer Confidence Report which we have since been able to clarify.

The City of Flint issued two separate Consumer Confidence Reports (CCR's) in 2015 covering the water quality data from 2014. One report was for the period of January – April 2014 when the City was obtaining water from Detroit (DWSD). And a second report was for the period April – December 2014 when the City was using the Flint River and its own Water Treatment Plant.

The CCR for DWSD water was mailed to customers in June. The Flint River based CCR was mailed to customers in mid-July, delayed due to issues with the printing contractor. We agree that having two separate reports caused confusion. We are working with the City to ensure both reports are posted to the City's website and both are made available when requested by customers. Should the City choose to create separate CCR's during the year that the City of Flint connects to the Karegnondi Water Authority we will work with the City to provide more clarity and try to have all material included in a single mailing.

The DWSD based CCR is the one community members had at the meeting, while the DEQ brought a copy of the Flint River based CCR. As separate and distinct sampling was done under each source, this explains the discrepancy in the values and monitoring periods being reported in the respective CCR's.

We appreciate your interest in these matters and hope this has addressed many of the questions brought up during our meeting. I would like to provide this information to both Dr. Sullivan and Ms. Mayes, but I do not have their contact information. I'm hoping you can share this with them and any others that may be interested.

Sincerely,

We are aware that Virginia Tech researchers are now testing water at various Flint homes for lead levels. We appreciate that Virginia Tech's team is working on this issue because it brings the public spotlight on an important fact: if you have lead water pipes or plumbing fixtures containing lead in your home, or a lead service connection to the city system, it is very likely you are ingesting some level of lead. That's just a fact. It's true whether you live in Detroit, Dowagiac or Decatur.

And in the City of Flint, that fact affects 15,000 or more residences.

However, we want to be very clear that the lead levels being detected in Flint drinking water are not coming from the treatment plant or the city's transmission lines. Treated water leaving the plant has no detectable levels of lead in it. The issue is how, whether, and to what extent the drinking water is interacting with lead plumbing in people's homes.

It does not appear the Virginia Tech research lab is certified, and we can't speak to the sampling methods being employed to achieve these results. The results reported so far fail to track with any of the lead sampling conducted by the city. In addition, the Virginia Tech results are not reflected by the blood lead level testing regularly conducted by the state department of community health that have not shown any change since Flint switched sources.

The state's compliance monitoring program requires the city to use certified laboratories and a standardized, federal testing protocol that looks specifically at the homes in communities most likely to experience lead problems. The latest results from Flint, obtained from two separate rounds of testing over the past year, indicated that Flint drinking water, meets state and federal safe drinking water standards for lead.

That said, the state has requested Flint to 'optimize' its water treatment to further limit exposure to lead from plumbing in homes. While statute allows several years for a drinking water system to actually undertake this process – Detroit took five years to complete its water optimization work – we are encouraging Flint water system operators to take these steps immediately and we are encouraged by the conversation so far.

Any resident who has concerns about lead in their drinking water should have their water tested at a certified laboratory and get professional consultation on how to address it. The leading cause of lead poisoning is known to be lead paint and, in some areas, environmental legacy hot spots where lead is present in soils. However, I will say it again: when homes are fitted with lead plumbing or plumbing fixtures containing lead, homeowners should assume there is some varied level of interaction between water and pipes that results in lead exposure.

Brad:
I left a message with Mike Prysby on Tuesday, Sept. 1, but wanted to reach out to you also because of stories we are working on about the extent to which lead is becoming an issue in Flint drinking water.
Today, Sept. 2, researchers at Virginia Tech posted the results on an experiment with Flint water online. The report concludes that Flint River water leaches much more lead from plumbing than does Detroit.
"On average, Detroit water is 12 times (or 12X) less corrosive than the Flint River water currently in use … This is creating a public health threat in some Flint homes that have lead pipe or lead solder," the report says.
An earlier post by the same researchers says that initial water tests show "a serious lead in water problem" in Flint, partly because Flint River water is so corrosive to pipes.
Given the state's role in oversight of the city's drinking water system through DEQ and its overall oversight by state emergency managers during the past several years, I wanted to make sure I'm reaching out to the right person to respond to this information.
Could you let me know who that is?
I expect to post the first story about the experiment today and expect the issue will be getting more attention as the VT study of 300 water test kits from Flint is completed.

Cc: Busch, Stephen (DEQ)
Subject: RE: flint water

Ron,

As we discussed last week, the state DEQ is just as perplexed by Edwards' results as he seems to be by the city's test results, which are done according to state and federal sampling guidelines and analyzed in certified labs.

When I said we were unsure how the Virginia Tech team got its results, that's not the same as being surprised that they got them. There are a conservatively estimated 15,000 old homes with lead plumbing in Flint alone, and this group specializes in looking for high lead problems. They pull that rabbit out of that hat everywhere they go. Nobody should be surprised when the rabbit comes out of the hat, even if they can't figure out how it is done.

It's scientifically probable a research team that specializes in looking for lead in water could have found it in Flint when the city was on its old water supply. We won't know that, because they've only just arrived in town and quickly proven the theory they set out to prove, and while the state appreciates academic participation in this discussion, offering broad, dire public health advice based on some quick testing could be seen as fanning political flames irresponsibly. Residents of Flint concerned about the health of their community don't need more of that.

As I mentioned last week, the issue here isn't Flint's water source or water plants. It's the high number of older homes with lead pipes and lead service connections. Anyone with lead plumbing in their homes should recognize there's some communication of lead from that.

The state and the EPA are working together in Flint -- have been from the start, and we are in regular communication with federal counterparts to discuss Flint water. The state's program has been in place, protecting community water supplies for more than 40 years around the state. The reason this conversation began is because we have lead and copper rules; the city met the state and federal

standard, and has agreed to further optimize its system to even further reduce lead levels, but let's be clear: lead pipes means some lead in water, at some level. Folks who have concerns should get a water specialist to take a look at their home and see what they need to do to achieve peace of mind, because lead and copper are home plumbing problems that no water source can eliminate entirely.

Special Presentation to City Council on Water to be Included in City Council Meeting Agenda for Monday, September 14, 2015

Flint, Michigan – September 14, 2015 – The agenda for the regular City Council meeting scheduled for Monday, September 14, 2015 at 6:00pm will include a special presentation to update residents on water. The presentation will include the steps taken thus far to address the quality, safety and affordability of the water as well as upcoming plans to make improvements to the water system. This is a public meeting and residents are encouraged to attend.

Senator Ananich has formed a new coalition to speak on the water issues in Flint. Hurley hospital will be a member of that coalition. This coalition may be competitive with the existing Clean Water Coalition where a lot of the grassroots types participate. Hurley will also work to get more residents water filters, and that may be apart of the announcement today.

Paul, between you and me, we have concerns about the MLive story. I'm happy to give you the information first hand.

The administration has worked closely with the Concerned Pastors group on the water issue, and the members are passionate about supporting their parishioners and the Flint community as a whole. We certainly share their concern that everyone in Flint should have safe, clean water. Flint water does meet state and federal safety standards. People have complained about the color and the odor, and faucet filters will help with those challenges as well as improving water quality overall.

About two months ago, the governor's office worked with a corporate donor to provide 1,500 of the faucet filters. We're appreciative of the efforts of the donor, which didn't want recognition. We respect those wishes. We are talking with other businesses and groups that might be able to expand the effort.

We worked with the pastors group to distribute the filters, and asked that members respect the donor's wishes not to be identified. We told the group that were not looking for credit, and appreciated the pastors' efforts in working with the community.

The governor continues to work with state, federal and city staff members and agencies on a variety of steps to build upon what we've already done to help Flint city leaders with their water infrastructure challenges.

Subject: RE: Grant

I don't recall either grant being related to "the existence of lead and copper pipes, and the impact…of Flint River water" (Nancy's words) as neither had surfaced as an issue that I am aware of. Brad?

The grants…which the City submitted applications for (which I do not have access to tonight)…were to be used for exactly what was described in the Gov's release:

$1.1 million for water system enhancement through improved waste management and $900k for system enhancement through leak detection and pipe assessments.

The other $2.24 million you are asking about came from the state-approved (Treasury & DEQ) restructuring of Flint's Drinking Water Revolving Fund loans. The restructuring saved the city the $2.24m…with $1.5m used to pay for the installation of a Granulated Active Charcoal filter (GAC) at the Water Treatment Plant.

Below is a section from the Flint Water TPs distributed in late January-early February 2015.

The City has received significant financial assistance through both grant programs and bond restructuring initiatives administered by the MI Department of Treasury. This financial assistance has allowed the City to replace miles of aged pipeline and begin efforts to install a specialized filter at the Water Treatment Plant.

In February, Flint was awarded a total of $2 million through two Financially Distressed Cities, Villages, and Townships Grants. $1.1 million was awarded for water system enhancements through improved waste management while $900,000 was awarded for water system enhancements through leak detection and pipe assessments.

On April 8th, the City announced that it was moving forward with a series of actions to ensure the continued safety of Flint drinking water and address issues of discoloration and odor. The most significant step will be the installation of a Granulated Active Charcoal filter (GAC) at the Water Treatment Plant. The GAC filter will help block or eliminate the formation of TTHM during the filtration process.

A contract for the filter installation was approved by the State Treasurer with the project targeted for completion by mid-July. The $1.5 million project will be funded with proceeds from the state-approved restructuring of Flint's Drinking Water Revolving Fund loans ($2.24 million).

The City is undertaking a number of other improvements to the water system including the acceleration of valve replacements, targeted hydrant flushing, the replacement of two miles of water main in a critical area of the city, and acceleration of the project to automate plant operations.

Subject: PRESS RELEASE: EM Authorizes DWRF Bond Restructuring

Flint Emergency Manager Authorizes Bond Restructuring to Afford Additional $2.24 Million toward Capital Improvements in Water

Flint, Michigan – March 19, 2015 – Flint Emergency Manager Jerry Ambrose today authorized a restructuring of four outstanding Drinking Water Revolving Fund (DWRF) bonds to allow postponing current principal payments in the total amount of $2.24 million. This action will allow the $2.24 million budgeted for debt service to be utilized for expenses associated with maintaining safety and improving quality of the Flint water supply. Approval of the State Treasurer is required before the restructuring can occur.

Flint has recently received a final report from Veolia, its water expert advisor, making a series of recommendations to maintain and improve the Flint water supply. These recommendations, and other items identified in the City's current capital improvements plan, will be considered as the City develops and implements its action plan to maintain and improve the Flint water supply. Discussion on the development of the action plan will begin today, March 19, 2015 at the Water Advisory Committee meeting, scheduled to begin at 2:00 pm at the Flint Public Library.

The State of Michigan was instrumental in allowing the restructuring, as approvals are required by both the State Treasurer and the Director of the Michigan Department of Environmental Quality. "At all levels, the State of Michigan has been most cooperative in assisting the City of Flint as it addresses the many issues confronting the Flint water system", said Ambrose. "Access to $2.24 million at this time will be very helpful in moving forward with our action plan."

The proposed restructuring will free up funds to enable the City to more quickly begin implementing recommended improvements to its water treatment and distribution system. Several recommendations for

improvement are currently unbudgeted and the $2.24 million will help assure that the most important can be performed.

Recommendations to be considered include the addition of a Granulated Activated Carbon Filter, estimated at as much as $1.5 million; acceleration of the repair and replacement of values, estimated at an additional $120,000 annually; additional pipeline replacement, estimated at $1 million per mile; and acceleration of the project to automate plant operations, estimated at $450,000. $1.315 million will become available in the City's current fiscal year, and the remaining $925,000 will be available in the next fiscal year.

The bonds are currently financed at a rate of 2.5%, and postponement of the principal payment will incur some additional interest expense over the life of the issue. While the interest rate will not increase, the total interest cost will increase by approximately 2% ($228,000) over the 20 year life of the issues.

Subject: Lead Information for Flint Water Website

Hi Josh,

Attached are a few documents, and below is the text that you can use for the Flint Water website. We may have one more document coming but for the time being, this is it:

Lead Poisoning Prevention and Reducing Exposure Risks

Parent Handbook: Is Your Child Safe From Lead Poisoning?
Blood Lead Level (BLL) Quick Reference for Primary Care Providers
Lead Screening & Testing for Safe, Healthy Michigan Kids

Lead exposure can occur from a number of different sources (such as paint, gasoline, solder, and consumer products) and through different pathways (such as air, food, water, dust, and soil). Although there are several exposure sources, lead-based paint is still the most widespread and dangerous high-dose source of lead exposure for young children in the US and Michigan. In housing built before 1978, it can be assumed that the paint in the home has lead unless tests show otherwise. To reduce lead exposure in your home, there are a number of steps you can take.

- Make sure your child does not have access to peeling paint or chewable surfaces painted with lead-based paint.
- Children and pregnant women should not be present in housing built before 1978 that is undergoing renovation. They should not participate in activities that disturb old paint or in cleaning up paint debris after work is completed.
- Create barriers between living/play areas and lead sources. Until environmental clean-up is completed, you should clean and isolate all sources of lead.
    - Close and lock doors to keep children away from chipping or peeling paint on walls. You can also apply temporary barriers such as contact paper or duct tape, to cover holes in walls or to block children's access to other sources of lead.
- Regularly wash children's hands and toys. Hands and toys can become contaminated from household dust or exterior soil. Both are known lead sources.
- Regularly wet-mop floors and wet-wipe window components. Because household dust is a major source of lead, you should wet-mop floors and wet-wipe horizontal surfaces every 2-3 weeks.
    - Windowsills and wells can contain high levels of leaded dust. They should be kept clean. If feasible, windows should be shut to prevent abrasion of painted surfaces or opened from the top sash.
- Take off shoes when entering the house to prevent bringing lead-contaminated soil in from outside.

- Prevent children from playing in bare soil; if possible, provide them with sandboxes. Plant grass on areas of bare soil or cover the soil with grass seed, mulch, or wood chips, if possible.
    - Until the bare soil is covered, move play areas away from bare soil and away from the sides of the house. If you have a sandbox, cover the box when not in use to prevent cats from using it as a litter box. That will help protect children from exposure to animal waste.
- Avoid using makeup, containers, cookware, or tableware to store or cook foods or liquids that are not shown to be lead free.
- Remove recalled toys and toy jewelry immediately from children.
- Use only cold water from the tap for drinking, cooking, and making baby formula. Hot water is more likely to contain higher levels of lead. Most of the lead in household water usually comes from the plumbing in your house, not from the local water supply.
- Shower and change clothes after finishing a task that involves working with lead-based products such as stained glass, making bullets, or using a firing range.

Flint Drinking Water
Media Q&A

Is the city going back to DWSD?
That's something we're leaving open. It's certainly an option, but there are no moves at this time to do so. If it becomes something city leadership is interested in doing, the state is willing to act as a facilitator between Flint and DWSD to help come to conclusion that's best for the residents of Flint.

How did the state not see or fix this problem sooner?
Right now, we're focusing on addressing the problem at hand. Every household in the city of Flint is going to receive a water filter. The Flint Water Treatment Plant is going to fully optimize its corrosion controls by Nov. 1. And we're going to accelerate water system improvements to address the replacement of lead service lines.

In the long term, we will work with the U.S. EPA to look at water testing protocol.

Is the water safe?
The water leaving the Flint Water Treatment Plant is safe to drink and meets federal guidelines for lead. However, we recognize some residents experience higher levels of lead in the water that comes out of their faucets because of lead plumbing in the home. We will expand water testing to better determine which areas have a problem; however, in the meantime, every home will receive a filter to ensure their drinking water is safe.

Does this mean Marc Edwards was right?
We aren't familiar with his testing protocol and have not seen his data. All we know is the state's data and the data Hurley Medical Center provided indicate a need to take action.

Why didn't you require corrosion controls from day one?
When the city switched water sources, they did begin using lime softening as a corrosion control. DWSD used phosphates, which is another form of corrosion control, but far from the only one. Flint was within federal protocols when it chose to use lime, and this is consistent with what every other community was required to do.

With more data in hand, the city can now work to optimize their corrosion control system, and has pledged to do so by Nov. 1.

How do you feel about the state and federal testing protocols now that you know there was a problem?
We're going to be taking a look at that, because what weren't seeing is concerning. But in the meantime, we're going to…

Why are you requiring optimization now?
What will you do if the schools you are testing come back with lead?
Is the Governor going to give the city the $30 million it asked for? Or the $13 million state Sen. Ananich wants to include in the budget?
Why did the Governor and the state ignore city residents who have been saying there's a problem for six months?
Why did the Governor hide the fact that he was involved in distributing filters previously?
Will you meet with Marc Edwards?
Do you trust the city's data?
Why did the Governor allow the city to switch away from DWSD initially?
Has the city/Governor put residents at risk?
What will the state do about my children? Lead poisoning causes irreversible damage.
Is lead just a problem in Flint?
Why isn't the Governor here today?
Does the Flint River have lead? Is it more corrosive than the water from DWSD?
If the lead is in individual homes' plumbing, how long will it take to fix this problem? Will the move to KWA fix it, or will we still see lead?
Will testing start over when we move to KWA?
Why aren't Kildee and Ananich here?
How much are we paying all these new consultants – Dr. Wells and the EPA expert?
Did the DEQ provide any advice to the emergency manager about the switch from DWSD?
How long has lead been a problem in Flint? If the problem is in people's home, does that mean they have always been poisoned by this?
Why aren't you declaring a state of emergency?
Why aren't you providing bottled water?
How long does it take for the system to be fully optimized once the corrosion control treatment begins?

PREGNANT AND NURSING MOTHERS

WHAT YOU NEED TO KNOW ABOUT LEAD POISONING

What causes lead poisoning?

There are many factors that can put a pregnant woman or nursing mother at risk for lead poisoning.

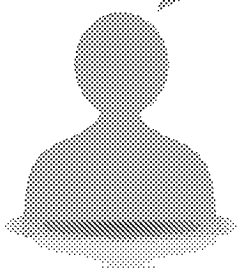
In Michigan, lead paint is still the #1 cause of lead poisoning. It is often found in homes built before 1978 and the older the home, the more likely that painted surfaces like windows, cupboards, doors and porches will contain lead paint.

Other sources of exposure may include soil and water or jobs and hobbies using lead such as factory work, soldering, ammunitions or jewelry making. Some pottery glazes, imported spices and home remedies may also contain lead.

Should I get tested?

Routine blood testing is NOT recommended for all pregnant women or nursing mothers. Talk to your doctor or local health department to learn more.

If I test positive for lead poisoning, can I continue to breastfeed?



In most cases, breastfeeding is safe. However, if your blood lead level goes above 40 ug/dl *or* your level is greater than 20 ug/dl and your baby has a level above 5 ug/dl, you should talk with your doctor about continuing to breastfeed.

Childhood LEAD POISONING prevention program

What can I do to protect myself from lead?

- Wash hands, bottles, pacifiers and toys often.
- Always take off shoes before going into the house.
- Flush your pipes before drinking, and only use cold water for drinking or mixing formula. Flush pipes by running the water for approximately 5 minutes.
- Watch your diet carefully. Foods high in calcium and iron help keep lead from being absorbed by your body.
- Avoid using power sanders, open-flame torches, heat guns, dry scrapers and dry sandpaper on painted surfaces.
- Fix peeling or chipping paint.
- Use a certified Repair and Remodeling Professional when making updates to your home.
- Practice safe cleaning methods.

Subject: HIGH PRIORITY: Updated Flint water action plan
Importance: High

Hi all –

Attached are several items pulled together to help announce the new comprehensive action plan related to Flint water tomorrow. This build upon past efforts and as aimed to be a real collaborative effort with local, state and federal agencies, along with city and community leaders. These items are:

- News release
- Infographics – one to summarize action plan and one to help highlight the tips for Flint residents
- High level points

The Governor, along with Dan Wyant, Nick Lyon, and Dr. Eden Wells are slated to do an embargoed media conference call with select reporters at 11:15 a.m. tomorrow.

This will be followed by a 1:30 p.m. press conference in Flint led by Directors Wyant and Lyon, moderated by Harvey, and including Dr. Wells and Flint Mayor Dayne Walling. EPA Region 5 Administrator Susan Headman dropped out late today due to some pending litigation. It's possible that Cong. Kildee and/or State Sen. Anaich and State Reps. Neely and Phelps may be participating as well.

There will also be a clearinghouse of Flint water information available at a new web site – www.michigan.gov/FlintWater. It will be live at 1 p.m. tomorrow.

Please review and let us know of any Qs, concerns, last edits, of if anything else is needed at all.

They are going through last review and refinement now. Please do not share materials until we know they are final.

Thanks much,
SW

Subject: RE: Flint water filter paragraph for website

We made an edit to the last bullet point. How's this look, everyone?

"To ensure safe drinking water, the state of Michigan is providing water filters for free.

1) Governor Snyder has identified $1 million in funding to secure filters for Flint residents.
2) The Michigan Department of Health and Human Services will provide filters for free to Flint DHHS clients* in 25,000 households.
3) Working with United Way, community partners, and corporate sponsors to secure additional filters and distribute them.

Please check mi.gov/FlintWater for regular updates regarding water filters for Flint residents.

*The eligible programs are: Family Independence Program (FIP), Food Assistance Program (FAP), Child Development and Care (CDC), State Disability Assistance (SDA) or Social Security Insurance (SSI) recipients."

Subject: Re: Flint water filter paragraph for website

Hi Josh:

2nd point -- can we say "The Michigan Department of Health and Human Services will provide filters for free to Flint DHHS clients in 25,000 households."?

We would like to stay away from "identified funds" until the amount is finalized.

One other thought -- should we put an asterisk after Flind DHHS Clients* and list which program participants are eligible as a footnote at the end? I'll leave it up to you, but those eligible are those who were former DHS clients -- not necessarily all MDHHS clients. We can clarify if asked but it might be better to avoid initial confusion -- we wouldn't want to mislead all HMP enrollees, for example.

The eligible programs are: Family Independence Program (FIP), Food Assistance Program (FAP), Child Development and Care (CDC), State Disability Assistance (SDA) or Social Security Insurance (SSI) recipients.

A,

Water filters available for MDHHS clients, all Flint residents beginning Tuesday

LANSING, Mich. – Free water filters will be available to current Michigan Department of Health and Human Services clients and Flint residents at four locations beginning Tuesday, October 6, at 9 a.m. through a partnership between the MDHHS and the Genesee County Community Action Resource Department. Free National Sanitation Foundation certified water filters are being provided to Flint residents as part of the administration's comprehensive approach to addressing water concerns in the area.

Current MDHHS clients are encouraged to visit either the 125 E. Union St. or 4809 Clio Road MDHHS office location to obtain a free, certified home water filter. Residents who are not currently enrolled in MDHHS assistance programs should visit the Genesee County Community Action

Resource Department offices located at 2727 Lippincott and 601 North Saginaw in Flint. Staff will be onsite at all four locations from 9 a.m. to 4 p.m., Monday through Friday, to distribute filters and assist residents who have questions about proper installation.

"Ensuring that families in the Flint area have access to resources that will help reduce the potential for lead exposure is our top priority," said Nick Lyon, director of the MDHHS. "I want to thank our partners who have mobilized to make water filters available – a point that highlights the importance of continued collaboration at the local, state and federal level as we move forward."

MDHHS clients in the city of Flint who are active Family Independence Program (FIP), Food Assistance Program (FAP), Child Development and Care (CDC), State Disability Assistance (SDA), or Social Security Insurance (SSI) recipients should bring valid identification and a copy of their water bill to their local MDHHS office to receive their filter free of charge. Flint residents who are not active MDHHS clients should bring identification and their water bill to the GCCARD location.

Although blood lead levels throughout the city of Flint have remained steady, last week, MDHHS data was found to be consistent with a recent Hurley Children's Hospital study indicating increased blood lead levels in children residing in two Flint ZIP codes after a 2014 change in water source. While lead paint remains the number one cause of lead poisoning in Michigan, the recent data prompted MDHHS to take action to reduce potential lead exposures through water sources.

MDHHS is urging parents in Flint and throughout the state to do their part in preventing elevated blood lead levels in children. For more information about steps you can take now, visit www.michigan.gov/lead, or contact your local health department. For updates on Flint water and available resources, visit www.michigang.gov/flintwater.

Subject: Flint Water FY 2016 Supplemental Budget Request

This went to SBO moments ago

DRAFT Flint Water FY 2016 Supplemental Budget Request

1. $1 Million for Filters

The $1 million for filters will be used to purchase filters for households in Flint that do not qualify for assistance under any of the DHHS assistance programs. Filters for those residents will be paid for out of funding already in place in DHHS' budget. Each filter cost $20 and were ordered in bulk through Home Depot. Filters are being distributed through local public health, with documentation filed for each filter handed out.

2. $6 Million for switch from Flint River to DWSD

It will cost the City of Flint an additional $1.3 million per month to use DWSD instead of the Flint River. The State and the City agreed to split the cost until June 2016, when the new Karegnondi Water Authority will be completed and Flint will switch to that water source. ($1.3 million for 9 months)

3. $1.5 Million for 12 additional staff to do community Lead Exposure Testing

DEQ, DHHS and LARA are assembling a team to go into schools and high risk homes to test for lead exposure. The request is for 8 staff for DHHS, 2 staff for DEQ and 2 staff for LARA.

4. $1 Million for evaluating sample results at the State Lab

The new testing protocols for schools will require each faucet in the school to be tested and evaluated at the State lab. In addition, lead exposure testing in homes will result in tens of thousands more samples that will be need to processed. Each sample costs $26 to process.

Total Ask: $9.5 Million

Subject: Flint water outreach list

Attached is the outreach list for announcement for tomorrow. Please note that Kildee has been assigned to Governor tonight, and Ananich tomorrow.

I was not sure who we were contacting for Local Public Health- Geralyn can you help fill in that piece?

My understanding is this the outreach for the lead in the schools, and that outside of legislators, we are not telling anyone about the DWSD deal. Are we telling all legislators about the DWSD deal, or just the leadership team?

Thanks,

Maggie

Subject: Re: FW: Draft run of show and release

Thank you. Please do use Jason as the City public information officer and press contact. Release looks great!

Couple things and my quote

This sentence is not accurate: Flint city leaders requested the state's help to fund the reconnection after a Wednesday meeting of Flint's Technical Advisory Committee.

I made my request to the Governor and COS on 10/2 and the Governor asked me about a funding arrangement prior to the advisory committee meeting.

I think you could use a more general line such as: Flint city leaders requested the state's help to fund the reconnection and to assist with health and infrastructure issues.

Then my quote:
"Reconnecting to Detroit is the fastest way to deliver clean, safe water to Flint and stabilize the infrastructure system. I appreciate the State, the Mott Foundation, Detroit, and the County's participation in a solution for Flint's water problems. The health and safety of Flint's families, children and seniors is my top priority and reconnecting to Detroit is a major step that the City could not take alone given budget constraints."

Finally, I have heard debate among the technical staff about the term optimized corrosion control. In particular, I understand that optimization actually takes place over time and Flint's system may not be optimized with the dosage of phosphate based corrosion control currently in the Detroit system, which is at a maintenance level.
INstead of: Additionally, the Great Lakes Water Authority has already fully optimized its corrosion control
Could say: Additionally, the Great Lakes Water Authority water already has additional corrosion control

Nice working with you too and see you tomorrow
Dayne

Greetings Mayor and Jason –

Here is proposed run of show for tomorrow, along with the draft release. Again, per earlier conversations, highly confidential and not for sharing as dependent on final details getting worked out at tomorrow's 9 a.m. meeting.

On the release, please note in particular the placeholder for the Mayor's quote.

Please review and let us know of any edits or concerns you may have. We look forward to your feedback. If there's a chance you can get us the quote sometime yet this evening, that'd be fantastic.

Also, we'd like to put a city media contact here as well. Assuming that's Jason. Just wanted to verify which contact info should we use?

Thanks again. Glad to be working and collaborating with the city on this very challenging issue.

Best regards,

SW

Release:

Gov. Rick Snyder: Move back to Detroit water provides best protection for public health in Flint

State, Mott Foundation and city form partnership to fund switch

FLINT, Mich. – Flint families and children will be better protected by reconnecting with the Great Lakes Water Authority as the source of the city's drinking water, Gov. Rick Snyder said.

Snyder said Thursday that he will request the state Legislature to provide half, or $6 million, of the $12 million needed to reconnect with the authority. The Flint city government will provide $2 million and the Charles Stewart Mott Foundation will donate $4 million.

"All Flint residents need clean, safe drinking water," Snyder said. "The technical experts helping the city on its water advisory all agree this move back to the Great Lakes Water Authority provides the best public health protection for children and families. This effort today is the result of people coming together to solve a problem. I appreciate Detroit's willingness to reconnect with Flint, the Mott Foundation's generous donation, and the dedication of all parties to come together to protect Flint families and children."

The Michigan Departments of Environmental Quality and Health and Human Services today also committed an additional $3.5 million for water filters, free lead testing through the state laboratory for Flint water customers, and hiring additional staff to conduct health exposure monitoring for lead in drinking water.

Flint city leaders requested the state's help to fund the reconnection after a Wednesday meeting of Flint's Technical Advisory Committee. Flint's move to the Great Lakes Water Authority is expected to cost about $1.3 million per month until the Karegnondi Water Authority is completed next summer.

INSERT MAYOR QUOTE HERE

The move to Detroit water, which is drawn from Lake Huron, carries many public health benefits. As large bodies of water, the Great Lakes are naturally prone to fewer problems from large rain events and other runoff issues that can be present in shallower rivers. Additionally, the Great Lakes Water Authority has already fully optimized its corrosion control, using phosphates to help coat the insides of pipes and prevent lead from leaching into the water.

However, reconnecting with the authority will not completely resolve the city's problem with lead service lines or aging infrastructure. It will take time for pipes in Flint to become coated with the phosphate corrosion control. Additionally, some households in the city could experience lead in their drinking water until all lead pipes and plumbing are replaced.

INSERT MOTT FOUNDATION QUOTE HERE

To best protect public health, Snyder said state and local authorities will continue to carry out steps outlined on Oct. 2 in a comprehensive action plan, including continued testing, the use of faucet filters and providing residents with accurate information about steps to eliminate lead exposure.

Free filters are available for current MDHHS clients at the 125 E. Union St. or 4809 Clio Road MDHHS office locations. For residents who are not currently enrolled in MDHHS assistance programs, free filters are available at the Genesee County Community Action Resource Department offices at 2727 Lippincott and 601 North Saginaw in Flint. Staff will be at all four locations from 9 a.m. to 4 p.m., Monday through Friday, to distribute filters and assist residents who have questions about proper installation. At the Lippincott location only, extended hours will be offered this weekend, including until 7 p.m. on Thursday and Friday and from 10 a.m. to 2 p.m. on Saturday.

Other good practices for residents concerned about lead include turning on the cold water tap and running the water until it's as cold as it will go. Additionally, only use cold water for cooking, drinking and especially mixing baby formula.

School test results released; more investigation planned

The state today also released the first results from its lead screening program in schools and homes. Of 37 total samples taken at 13 buildings, four samples spread over three buildings exceeded the federal action level of 15 parts per billion.

However, this sampling provides only an initial screen, and the state is committing to further testing water and inspecting plumbing at these schools. Until testing is complete, schools are advised to continue using bottled water and filtration as a precaution to protect children.

In addition, free testing is still available for any other Flint school, including daycares and Head Starts. Free testing is also available for any Flint resident.

Additional information, including more detailed lead screening results, is available at www.michigan.gov/flintwater.

Gov. Rick Snyder: Move back to Detroit water provides best protection for public health in Flint

State, Mott Foundation, city form partnership to fund switch until KWA is ready

FLINT, Mich. – Flint families and children will be better protected by reconnecting with the Great Lakes Water Authority as the source of the city's drinking water until the Karegnondi Water Authority pipeline is completed, Gov. Rick Snyder said.

Snyder said Thursday that he will request the state Legislature to provide half, or $6 million, of the $12 million needed to reconnect with the authority through next summer, when the KWA is expected to be completed. The Flint city government will provide $2 million and the Charles Stewart Mott Foundation has committed $4 million.

"All Flint residents need clean, safe drinking water," Snyder said. "The technical experts helping the city on its water advisory all agree this move back to the Great Lakes Water Authority provides the best public health protection for children and families. This effort today is the result of people coming together to solve a problem. I appreciate Detroit's willingness to reconnect with Flint, the Mott Foundation's generous commitment, and the dedication of all parties to come together to protect Flint families and children."

The Michigan Departments of Environmental Quality and Health and Human Services today also committed an additional $3.5 million for water filters, free lead testing through the state laboratory for Flint water customers, and hiring additional staff to conduct health exposure monitoring for lead in drinking water.

Flint city leaders requested the state's help to fund the reconnection and to assist with health and infrastructure issues. Flint's move to the Great Lakes Water Authority is expected to cost about $1.3 million per month until the Karegnondi Water Authority is completed next summer.

"It's heartening to know so many people are working at so many levels to bring safe, clean water back to Flint," Mott Foundation President Ridgway White said. "We believe that reconnecting the city's water supply to Lake Huron is the right and necessary thing to do, and we're glad we could help the state and the city make it happen."

"Reconnecting to Detroit is the fastest way to deliver clean, safe water to Flint and stabilize the infrastructure system," Flint Mayor Dayne Walling said. "I appreciate the state, the Mott Foundation, Detroit, and the county's participation in a solution for Flint's water problems. The health and safety of Flint's families, children and seniors is my top priority and reconnecting to Detroit is a major step that the city could not take alone given budget constraints."

To best protect public health, Snyder said state and local authorities will continue to carry out steps outlined on Oct. 2 in a comprehensive action plan, including continued testing, the use of faucet filters and providing residents with accurate information about steps to eliminate lead exposure.

Free filters are available for current MDHHS clients at the 125 E. Union St. or 4809 Clio Road MDHHS office locations. For residents who are not currently enrolled in MDHHS assistance programs, free filters are available at the Genesee County Community Action Resource Department offices at 2727 Lippincott and 601 North Saginaw in Flint. Staff will be at all four locations from 9 a.m. to 4 p.m., Monday through Friday, to distribute filters and assist residents who have questions about proper installation. At the Lippincott location only, extended hours will be offered this weekend, including until 7 p.m. on Thursday and Friday and from 10 a.m. to 2 p.m. on Saturday.

Other good practices for residents concerned about lead include turning on the cold water tap and running the water until it's as cold as it will go. Additionally, only use cold water for cooking, drinking and especially mixing baby formula.

School test results released; more investigation planned

The state today also released the first results from its lead screening program in schools and homes. Of 37 total samples taken at 13 buildings, four samples spread over three buildings exceeded the federal action level of 15 parts per billion.

Sent: Thursday, October 08, 2015 10:14 AM
To: Murray, David (GOV); Wurfel, Sara (GOV)
Subject: Flint water

Importance: High

Dan Wyant called Brian Whiston last night to let him know of the questionable lead levels they found in three Flint elementary schools and that further screening will be done…

I know that the Gov and Dan Wyant are going to be having a press conf in Flint today. Is there an embargoed press release or other background that we can prepare Brian with, if we get calls?

Thanks.

Subject: FLINT WATER : New form letter- questions

Hi Team,

Please see below the proposed Flint Water form letter….

For our knowledge/ not the letter:
If someone can give me information on the initial switch that would be helpful- when, why.

Also, the action timeline from when the state found out about the lead, up to today.

Let me know if we are good to go on the letter.

Thank you,

Laura

Thank you for your recent correspondence sent to Governor Rick Snyder regarding the water in Flint. As a member of Governor Snyder's staff, I am responding on his behalf.

Flint families and children will be better protected by reconnecting with the Great Lakes Water Authority as the source of the city's drinking water until the Karegnondi Water Authority pipeline is completed. Governor Snyder has asked the state Legislature to provide half, or $6 million, of the $12 million needed to reconnect with the authority through next summer, when the KWA is expected to be completed. The Flint city government will provide $2 million and the Charles Stewart Mott Foundation has committed $4 million.

Governor Snyder said "Flint residents need to have access to safe, clean, water now and long into the future." The technical experts helping the city on its water advisory all agree this move back to the Great Lakes Water Authority provides the best public health protection for children and families. The Governor appreciates Detroit's willingness to reconnect with Flint, the Mott Foundation's generous commitment, and the dedication of all parties to come together to protect Flint families and children.

Flint city leaders requested the state's help to fund the reconnection and to assist with health and infrastructure issues. Flint's move to the Great Lakes Water Authority is expected to cost about $1.3 million per month until the Karegnondi Water Authority is completed next summer.

The move to Detroit water, which is expected to carry, carries many public health benefits. As large bodies of water, the Great Lakes are naturally prone to fewer problems from large rain events and other runoff issues that can sometimes be present in shallower rivers. Additionally, the Great Lakes

Water Authority water already has additional corrosion control, using phosphates to help coat the insides of pipes and limit lead from leaching into the water. However, reconnecting with the authority will not completely resolve the city's problem with lead service lines or aging infrastructure. It will take time for pipes in Flint to become coated with the phosphate corrosion control. Additionally, some households in the city could experience lead in their drinking water until all lead pipes and plumbing are replaced.

To best protect public health, Governor Snyder, state, and local authorities will continue to carry out steps outlined on Oct. 2 in a comprehensive action plan, including continued testing, the use of faucet filters and providing residents with accurate information about steps to eliminate lead exposure. The Michigan Departments of Environmental Quality (DEQ) and Health and Human Services (MDHHS) also committed an additional $3.5 million for water filters, free lead testing through the state laboratory for Flint water customers, and hiring additional staff to conduct health exposure monitoring for lead in drinking water.

Free filters are available for current MDHHS clients at the 125 E. Union St. or 4809 Clio Road MDHHS office locations. For residents who are not currently enrolled in MDHHS assistance programs, free filters are available at the Genesee County Community Action Resource Department offices at 2727 Lippincott and 601 North Saginaw in Flint. Staff will be at all four locations from 9 a.m. to 4 p.m., Monday through Friday, to distribute filters and assist residents who have questions about proper installation. At the Lippincott location only, extended hours will be offered this weekend, including until 7 p.m. on Thursday and Friday and from 10 a.m. to 2 p.m. on Saturday.

Other good practices for residents concerned about lead include turning on the cold water tap and running the water until it's as cold as it will go. Additionally, only use cold water for cooking, drinking and especially mixing baby formula.

School test results released; more investigation planned

The state also released the first results from its lead screening program in schools and homes. Of 37 total samples taken at 13 buildings, four samples spread over three buildings exceeded the federal action level of 15 parts per billion.

However, this sampling provides only an initial screen, and the state is committing to further testing water and inspecting plumbing at these schools. Until testing is complete, schools are advised to continue using bottled water and filtration as a precaution to protect children.

In addition, free testing is still available for any other Flint school, including daycares and Head Starts. Free testing is also available for any Flint resident.

Please visit Michigan.gov/Flintwater for additional resources.

Thank you, again, for taking the time to share your concerns with our office. Should you have any further comments, questions or concerns regarding this or any other state-related matter, I've included my contact information below.

Sincerely,

Laura Stoken

Nick has put in calls to our subcommittee chairs and wanted to pass along the feedback he got.

All agree from the health side that the DHHS action is the right way to move forward. However they had some negative feedback on the $6 million.

--Representatives MacGregor and Poleski both feel this should be a loan to the City of Flint instead of direct payment of $6 million

--Senator Marleau complained about the lack of legislative input before the decision was made to switch back to Flint water from Detroit in the first place.

He left messages for Verheulen, Santana, Shirkey and Hertel.

Hi Jennifer,

I am looping in Wurfel on this as I just provided her with the attached spreadsheet. There is some confusion out there on the $3.5 million and Jonathon Oosting also called on this. Sara, do you want me to just call Eggert and walk him through the spreadsheet so he understands? Oosting just called me directly and I explained it to him, so I can do the same with Eggert.

Jennifer,

I thought I heard Snyder mention spending $4M separately from the $6M to switch back. News release says $3.5M. Can you clarify? Thx.

FYI.

I just received this from Natasha regarding the City's request to reconnect to DWSD.

The City is asking that the RTAB consider this tomorrow. I am in the process of sending this to the Board.

It appears that the City is planning on taking the $2M from Fund Balance.

Memorandum
To: Receivership Transition Advisory Board
From: Natasha L. Henderson, City Administrator
Date: Tuesday, October 13th
Re: Emergency Additions to the Agenda

Members of the Receivership Transition Advisory Board:

This memorandum respectfully requests the inclusion of two urgent items on the agenda for the October 14 Receivership Transition Advisory Board Meeting.

As you may be aware, the Genesee County Health Department has issued a public health advisory in regard to the high amount of lead contamination in City water in response to the findings of physicians at Hurley Hospital. This was followed by a similar advisory declared by the City.

Seeking to address this emergency, I requested that the City explore the possibility of ceasing the use of the Flint River as the City's water source and to reconnect to the Detroit Water and Sewerage Department (DWSD) until the KWA pipeline can be completed in 2016. This request was followed by a recommendation by the Mayor's Technical Advisory Committee to reconnect to DWSD to improve the City's water quality, thereby safeguarding public health. On October 8, 2015, the Governor pledged to provide financial assistance to Flint for the reconnection, in the amount of six million dollars. The Mott Foundation graciously offered to provide an additional four million. Combined with two million dollars provided by the City, a total amount of $12 million can be utilized to reconnect the City to DWSD for a nine month period.

In the interests of the public health and welfare, I request that the first item added to the agenda be a resolution (#150872) making available two million dollars from general fund balance to reconnect to DWSD. The second item requested to be added to the agenda is a resolution (#150875) granting the City Administrator the Authority to enter into a contract with DWSD. These items have been attached for your review.

I apologize for the sudden request for changes to the agenda, however the City is facing a critical emergency requiring immediate attention. The Administration has had to react with reflexive speed and remain adaptable to try to mitigate the serious consequences already affecting the residents of this community. I ask that you please consider my request to add and approve these items so that we may address this emergency in a timely and responsive manner.

Respectfully,

Natasha L. Henderson, City Administrator

RESOLUTION NO.: 150872

PRESENTED: _____

ADOPTED: _____

RESOLUTION AUTHORIZING A BUDGET AMENDMENT TO INCREASE THE WATER AND SEWER BUDGET BY $12,000,000.00 AND TO ALLOW FOR EXPENDITURES FROM THOSE FUNDS TO FACILITATE THE SWITCH BACK TO THE DWSD WATER SUPPLY

BY THE CITY ADMINISTRATOR:

Due to the serious health threat facing the residents of the City of Flint, the Administration has been diligently working toward a feasible and speedy resolution to the City's water crisis; and

Through the commitment of $6 million from the State of Michigan and $4 million from the C.S. Mott Foundation, a total of $10 million in contributions have been pledged to assist the City with the cost of purchasing water from the Detroit Water and Sewerage Department and its successor, the Great Lakes Water Authority, until the City is able to receive water from the Karegnondi Water Authority (KWA).

The City Administrator and the Mayor have agreed to the acceptance of these funds. At this time, the KWA reports that construction is on schedule to be completed by June 30, 2016. The City estimates that the total cost to purchase water through DWSD will be $12 million for 9 months. The balance of $2 million not covered by the generous pledges of State and Local resources is the responsibility of the City.

A budget amendment is necessary to reflect both an increase in revenues for the receipt of $10 million in assistance and $2 million of budgeted Use of Fund Balance and an increase in expenditures of $12 million for the purchase of DWSD water supply.

IT IS RESOLVED that the Finance Department is authorized to process a budget amendment to the appropriate Water and Sewer funds to facilitate the switch back to the Detroit water system as soon as practicable. Specific revenue and expenditure line items will be provided by the Chief Financial Officer.

RESOLUTION STAFF REVIEW

DATE: October 12, 2015

Agenda Item Title: **RESOLUTION AUTHORIZING A BUDGET AMENDMENT TO INCREASE THE WATER AND SEWER BUDGET BY $12,000,000.00 AND TO ALLOW FOR EXPENDITURES FROM THOSE FUNDS TO FACILITATE THE SWITCH BACK TO THE DWSD WATER SUPPLY**

Prepared By: Jody N. Lundquist

Background/Summary of Proposed Action: As a result of the ongoing concern for the health and wellbeing of the City of Flint's residents, City Administration has worked to negotiate the reconnection to Detroit Water and Sewerage Department (DWSD) supply until the Karegnondi Water Authority (KWA) pipeline construction is complete. Per KWA representatives, KWA construction remains on schedule with a final completion date of June 30, 2016.

Financial Implications: The purchase of water from DWSD is estimated to cost approximately $12 million through June 30, 2016 based on average usage of 16 million gallons per day. $10 million in support has been pledged from State and Local sources. The City proposes a budget amendment for Use of Fund Balance in the Water Fund in the amount of $2 million to cover the cost of purchasing DWSD water through fiscal year end.

While the City continues to grapple with the financial impact of the Preliminary Injunction Order issued on August 7, 2015, in the short term, both the shortfall in revenues as a result of the Order and the additional cost of responding to the health and safety of the City's water supply are exactly the type of events for which the City's Fund Balance Reserve policies were designed. To the extent that the City Water Fund Reserve is projected to fall below the required balance of 25% of current year operating expenses and one year's annual debt service, the City will propose a reserve replenishment plan to accompany adoption of the next fiscal year's operating budget.

Budgeted Expenditure? Yes No Please explain if no: Prior to the emergent concerns regarding the safety of Flint's water supply, the FY2016 budget reflects the cost of supplying Flint River water.

Account No.: n/a

Pre-encumbered? Yes No Requisition #: n/a

Other Implications (i.e., collective bargaining): None.

Staff Recommendation: **Approve FY2016 $2 million Use of Fund Balance budget amendment**

Staff Person: Jody N. Lundquist Approval: Natasha Henderson

ADOPTED:_____

RESOLUTION AUTHORIZING THE CITY ADMINISTRATOR TO TAKE NECESSARY ACTION TO CONVERT TO THE DETROIT WATER SYSTEM

BY THE CITY ADMINISTRATOR:

In order to promote the health, safety and welfare of this community, it is in the best interests of the City of Flint for the Detroit Water and Sewer Department (DWSD) to supply the City with treated water pending completion of the Karegnondi Water Authority; and

In order for DWSD to supply the City with water, it will be necessary to utilize pipe owned by the Genesee County Drain Commission (GCDC); and

The City, DWSD and GCDC are actively negotiating the terms of the necessary agreements to ensure this transition occurs as soon as possible; and

IT IS RESOLVED that the City Administrator is hereby authorized to enter into agreements with DWSD and GCDC for conversion to the Detroit Water System.

APPROVED AS TO FORM:

Mayor Dayne Walling Expresses Gratitude to State Legislature for Approval of Funding to Support Flint Water Needs

Flint, Michigan – October 15, 2015 – Flint Mayor Dayne Walling is expressing his gratitude to the Michigan Legislature for their quick response by approving a bill that provides over $9 million in funding for Flint. Both the State House and the Senate voted unanimously to pass bill HB 4102 to allow for the City of Flint to temporarily reconnect to Detroit water.

"I would like to thank the legislature for taking swift and decisive action to come to the aid of the citizens of Flint in time when they need it most," said Mayor Dayne Walling. "We can now move to secure a reconnection to Detroit and provide Lake Huron water until the KWA pipeline can be completed next year."

In addition to the $6 million asked for by Governor Snyder, the legislature approved an additional $3.5 million for support services related to water, including in-home plumbing testing, health testing and services for those affected by lead and the provision and distribution of water for vulnerable individuals.

Subject: Three key messages

1. It is increasingly clear through internal review at DEQ that staff overseeing drinking water mistakenly applied the wrong federal protocol when the city of Flint switched to the Flint River.

2. Today's announcement of new leadership in that division aligns with the states goal: make sure the public health is protected in Flint and elsewhere in the state, and ensure we learn from this so it never happens again.

3. The governor's action plan continues to protect kids and families in Flint, with the switch back to Detroit water last week, free water filtration for all city residents, and inspection of all Flint schools for lead exposure.

4. Flint families who are concerned are encouraged to take advantage of free home water testing through the city and blood lead level testing for children.

Mayor Dayne Walling Response to MDEQ's Admission of Fault in Flint's Water Emergency

Flint, Michigan – October 19, 2015 – The following is a response from Mayor Dayne Walling regarding the MDEQ's statement admitting fault in the Flint water emergency:

Today, the Michigan Department of Environmental Quality (MDEQ) acknowledges its leading role in the decision-making that led to the contamination of Flint's drinking water. The people of Flint hear this admission and we demand that the State fully fix this problem they caused. While the State taking responsibility and the switch to Detroit water are steps in the right direction for

Flint, actions speak louder than words. Now, the Governor and the State need to provide tens of millions of dollars to fix Flint's water and infrastructure as well as to provide for the families, children and schools affected. I will continue to push for changes and advocate for our City until every drop of water is 100% safe.

The MDEQ assured Flint that the switch was being handled safely and responsibly. We relied on the information from MDEQ, and clearly that information was wrong. My heart goes out to the children and families who are affected by this issue.

This morning our local Senator Jim Ananich said the following: "We do not know whether the misapplication of federal rules was intentional or due to negligence. That's why the Legislature needs to have a robust role in any investigation, and in ensuring those responsible for Flint's water crisis are held accountable." I applaud Senator Ananich's Statement and I urge the Governor and State Officials to take the necessary steps to ensure accountability so that this never happens again to any community.

To: Wurfel, Sara (GOV); Murray, David (GOV)
Subject: PROPOSED flint journal response.

The DEQ felt it important to acknowledge its responsibility for misinterpreting a federal protocol. We believe it is a critical step to rebuilding trust and confidence in the community.

That recognition is coupled with our demonstrated commitment to actions – near-term and long-term, to do what is necessary to ensure city residents have safe drinking water.

The Governor's after-action review is expected to bring more clarity and provide more answers on what has already happened. The DEQ is now focused on helping implement the Governor's plan – an unprecedented effort to bring resources to protecting the community and addressing lead concerns.

The MDEQ assured Flint that the switch was being handled safely and responsibly. We relied on the information from MDEQ, and clearly that information was wrong. My heart goes out to the children and families who are affected by this issue.

This morning our local Senator Jim Ananich said the following: "We do not know whether the misapplication of federal rules was intentional or due to negligence. That's why the Legislature needs to have a robust role in any investigation, and in ensuring those responsible for Flint's water crisis are held accountable." I applaud Senator Ananich's Statement and I urge the Governor and State Officials to take the necessary steps to ensure accountability so that this never happens again to any community.

RICK SNYDER
GOVERNOR

STATE OF MICHIGAN
EXECUTIVE OFFICE
LANSING

BRIAN CALLEY
LT. GOVERNOR

Contacts: Sara Wurfel or Dave Murray 517-335-6397	**FOR IMMEDIATE RELEASE** Wednesday, Oct. 21, 2015

Gov. Rick Snyder announces Flint Water After Action Report Commission to review state actions, offer recommendations

Experts in health, policy will provide ongoing monitoring of city water system

LANSING, Mich. – Gov. Rick Snyder today announced a new task force to review the state's actions regarding water usage and testing in Flint and offer recommendations on future guidelines for water testing.

The commission also will monitor the transition of Flint's city water system back to the Great Lakes Water Authority, and its eventual transition to the Karegnondi Water Authority pipeline.

Commission members include experts in policy, public health and medicine from both sides of the aisle, and will be co-chaired by Ken Sikkema of Public Sector Consultants and Chris Kolb, of the Michigan Environmental Council. Also serving will be Dr. Matthew Davis of the University of Michigan Health System, Eric Rothstein, of the Galardi Rothstein Group and Dr. Lawrence Reynolds of Hurley Medical Center.

"Transitioning back to the Great Lakes Water Authority is a good first step to protecting public health in Flint, but it's not the last step," Snyder said. "Bringing in outside experts to evaluate our actions and help monitor and advise on technical issues will be key to continuing work on the comprehensive action plan and ensuring safe drinking water for all the citizens of Flint."

Ken Sikkema is a senior policy fellow at Public Sector Consultants, where he specializes in public finance, environment, and energy policy. Prior to joining the firm, Sikkema served in both the Michigan House and Senate, culminating with four years as Senate majority leader. He has also served as both an adjunct and visiting professor at Grand Valley State University.

Chris Kolb is president of the Michigan Environmental Council, a statewide coalition of 70 environmental, public health and faith-based nonprofit groups. Before joining the MEC, Kolb represented Ann Arbor in the state House for six years and served eight years on the Ann Arbor City Council. He has been president of the MEC for eight years.

Matthew Davis, M.D., M.A.P.P., is professor of pediatrics and internal medicine at the University of Michigan Health System and Professor of Public Policy at the Gerald R. Ford School at the University of Michigan, having joined the faculty in 2000. He is the founding Director of the C.S. Mott Children's Hospital National Poll on Children's Health

and the National Voices Project. Davis also previously served as the chief medical executive of the Michigan Department of Community Health/Department of Health and Human Services.

Eric Rothstein is a national water issues consultant and principal at the Galardi Rothstein Group. He served as an independent advisor on the creation of the Great Lakes Water Authority. Rothstein also has served as Jefferson County, Alabama's rate consultant and municipal adviser for litigation related to the county's bankruptcy and issuance of $1.7 billion in sewer warrants and led strategic financial planning for the City of Atlanta's Department of Watershed Management. He has more than 30 years of experience in water, wastewater and stormwater utility finance and rate-making assessments.

Lawrence Reynolds, M.D., is a pediatrician in Flint affiliated with Hurley Medical Center. He received his medical degree from Howard University College of Medicine and has been in practice for 36 years. Reynolds previously was affiliated with Mott Children's Health Center. He has served as president of the Genesee County Medical Society and the Michigan Chapter of the American Academy of pediatrics.

Snyder has said reconnecting with the authority will not completely resolve the city's problem with lead service lines or aging infrastructure. It will take time for pipes in Flint to become coated with the phosphate corrosion control.

To best protect public health, state and local authorities will continue to carry out steps outlined on Oct. 2 in a comprehensive action plan, including continued testing, the use of faucet filters and providing residents with accurate information about steps to eliminate lead exposure. The Michigan Departments of Environmental Quality and Health and Human Services are continuing to provide free water filters, free lead testing through the state laboratory for Flint water customers, and hiring additional staff to conduct health exposure monitoring for lead in drinking water.

Re: EPA Review Needed on Flint, Michigan Water Treatment

Administrator McCarthy and Regional Director Hedman,

Today Congressman Dan Kildee requested that the United States Environmental Protection Agency conduct an investigation into the water system in Flint, Michigan. I agree that such an investigation is vital to ensuring that the people responsible for Flint's dangerous water quality are held accountable. Similar to Congressman Kildee's request, I am requesting the EPA conduct a review of the Michigan Department of Environmental Quality's (MDEQ) oversight of water treatment in Flint as provided for in the Lead and Copper Rule, 40 CFR Sec. 141.80.

After decades of relying on water from the Detroit Water and Sewerage Department (DWSD), Flint began treating its own water from the Flint River in April 2014 at the behest of state-appointed Emergency Managers. DWSD had used — and continues to use — anti-corrosion treatments in its water to prevent lead leaching from an aging infrastructure into residents' drinking water. For a number of reasons, raw water from the Flint River is significantly more corrosive than the lake water that DWSD uses. Despite this, Flint chose not to treat the raw Flint River water by any method traditionally associated with preventing lead corrosion. Multiple consultants and the EPA advised the city to use additional corrosion control measures, but that advice went unheeded by the City of Flint and the MDEQ.

Foreseeably, lead has been seeping into Flint's drinking water for more than a year, causing an alarming rise in the number of children in Flint with elevated blood lead levels. Independent research conducted by Virginia Tech professor Marc Edwards indicated high lead levels in tap water, and a study led by Hurley Medical Center pediatrician Dr. Mona Hanna-Attisha revealed that in high-risk areas of the city, the rate of lead overexposure among children more than doubled since switching water sources. State data have confirmed these results.

Additionally, several questions remain regarding how Flint and state officials conducted water sampling under the Lead and Copper Rule. Allegedly, officials did not target samples in high-risk Tier 1 locations or repeat locations in subsequent tests. Consumers were also instructed to pre-flush their taps prior to collecting samples, resulting in lower lead level results. It is unclear whether a sufficient number of samples were taken or why MDEQ excluded two high lead level samples from Flint's July 2015 water quality report.

SENATE MINORITY LEADER
JIM ANANICH

517.373.0412
senjananich@senate.michigan.gov
senatedems.com/ananich

/jimananich @jimananich

The State of Michigan has pledged to help reconnect the City of Flint to DWSD and take additional steps to help remediate the lead problem. However, these are stopgap measures that will never undo the damage already done.

Ultimately, the EPA retains the ability and responsibility to oversee the state's efforts to obtain and maintain safe drinking water for its residents. As such, I appreciate that the EPA has established the Flint Safe Drinking Water Task Force. However, it also is within the EPA's power to review the actions of MDEQ and the City of Flint as they pertain to lead testing and treatment under the Lead and Copper Rule. We want to ensure Flint remains compliant once it switches its permanent water source to the Karegnondi Water Authority.

I respectfully request that, under 40 CFR Sec. 142.19, Regional Administrator Hedman review MDEQ's determinations regarding corrosion control for lead in Flint, Michigan. Regardless of the findings, I am also requesting that Regional Administrator Hedman make public all evidence gathered during the course of that review. Michigan citizens deserve to know whether MDEQ is operating safely and effectively.

If you have any questions, please contact my office at senjananich@senate.mi.gov or (517) 373-0142. Thank you for your consideration.

Sincerely,

Jim Ananich

Ms. Gina McCarthy
Administrator
Environmental Protection Agency
1200 Pennsylvania Ave. NW
Washington, D.C. 20460

Administrator McCarthy:

As you know from our phone call last week, the Flint water crisis remains a critically important issue. It has become clear to me that unacceptable lead levels were a failure of government at every level. This includes both at the Michigan Department of Environmental Quality (MDEQ) and the U.S. Environmental Protection Agency (EPA). Despite evidence presented indicating the water quality was unsafe, repeated assurances were given by both the MDEQ and EPA that the water was safe to consume. Now we have learned that lead levels for months have been at dangerous levels that could potentially cause irreparable harm to Flint residents, particularly children, the elderly and those with weak immune systems.

In order to restore confidence, and to ensure that these failures never happen again, I believe that the EPA needs to conduct a thorough investigation into the causes of the water problems in Flint. The failure of government to provide safe drinking water to Flint is unacceptable, and there must be accountability.

Specifically, I am requesting assurances that, at a minimum, the EPA conduct a full review of its oversight of state programs, given delegated authority through the Safe Drinking Water Act and whether the MDEQ properly enforced the Lead and Copper Rule (LCR) and other safe drinking water programs. Additionally, an investigation that fully answers the following questions:

- Was the EPA aware that the MDEQ was using guidelines under the LCR that applied to cities with a population of less than 50,000 and not for the population of Flint, which is 99,000?

- Did the EPA notify MDEQ that the city of Flint should add a corrosion control treatment (CCT) to their drinking water following the switch to the Flint River?

- When did the EPA become aware that the city of Flint was using a lime softening agent as a CCT?

- What actions did the EPA take once they learned MDEQ was not requiring the city of Flint to use a proper CCT?

- Did EPA evaluate the testing guidelines that MDEQ was using in the city of Flint?

- When did the EPA first become aware of the potential elevated lead levels in Flint's water?

- After becoming aware of the potential elevated levels of lead, was the EPA required to notify anyone? If the EPA is not required to notify anyone, why not?

- Is there anything that prevents the EPA from notifying federally elected officials of potentially unsafe water in the city of Flint?

- Since switching to the Flint River, has EPA verified the city of Flint's compliance with the LCR themselves?

- Has EPA reviewed MDEQ's performance in regards to its delegated authority to enforce the LCR and other Safe Drinking Water Act regulations? If not, how come?

Unfortunately, the citizens of Flint are the victims in this situation. They deserve a thorough investigation and answers to these questions.

Due to the immediate need of the community, I am requesting a response by Tuesday, October 27, 2015. If you are unable or unwilling to conduct a thorough and independent review, I ask that you inform me by that date so I can move forward in seeking the answers my community deserves.

I look forward to hearing from you on this critical and important matter.

Sincerely,

Dan Kildee
MEMBER OF CONGRESS

Team,

Here's the planned release about Flint Water Task Force that is expected to be issued this afternoon. Please consider stakeholders you might want to notify.

Dave

Gov. Rick Snyder announces Flint Water Task Force to review state, federal and municipal actions, offer recommendations

Experts in public health, water management, environmental protection to focus on steps to protect residents

LANSING, Mich. – Gov. Rick Snyder today announced the creation of an independent advisory task force charged with reviewing actions regarding water use and testing in Flint and offer recommendations for future guidelines to protect the health and safety of all state residents.

Task force members include experts in public health and medicine, water management, and environmental protection from both sides of the aisle, and will be co-chaired by Ken Sikkema of Public Sector Consultants and Chris Kolb, of the Michigan Environmental Council. Also serving will be Dr. Matthew Davis of the University of Michigan Health System, Eric Rothstein, of the Galardi Rothstein Group and Dr. Lawrence Reynolds of Mott Children's Health Center in Flint.

"Transitioning back to the Detroit Water and Sewerage Department-Great Lakes Water Authority is a good first step to protecting public health in Flint, but it's not the last step," Snyder said. "Bringing in outside experts to evaluate our actions and help monitor and advise on potential changes to law, procedures and practices will be key to continuing work on the comprehensive action plan and ensuring safe drinking water for all the residents in Flint and all of Michigan."

Snyder said the administration will fully cooperate with task force members, saying he wants an unbiased report focusing on steps taken in the past and recommendations that could improve practices to ensure all residents have access to safe, clean water.

Ken Sikkema is a senior policy fellow at Public Sector Consultants, where he specializes in public finance, environment, and energy policy. Prior to joining the firm, Sikkema served in both the Michigan House and Senate, culminating with four years as Senate majority leader. He has also served as both an adjunct and visiting professor at Grand Valley State University.

Chris Kolb is president of the Michigan Environmental Council, a statewide coalition of 70 environmental, public health and faith-based nonprofit groups. Before joining the MEC, Kolb represented Ann Arbor in the

state House for six years and served six years on the Ann Arbor City Council. He has been president of the MEC for six years.

Matthew Davis, M.D., M.A.P.P., is professor of pediatrics and internal medicine at the University of Michigan Health System and professor of public policy at the Gerald R. Ford School at the University of Michigan, having joined the faculty in 2000. Davis also is a professor of health management and policy at the School of Public Health. He previously served as the chief medical executive of the Michigan Department of Community Health/Department of Health and Human Services.

Eric Rothstein is a national water issues consultant and principal at the Galardi Rothstein Group. He served as an independent advisor on the creation of the Great Lakes Water Authority. Rothstein also has served as Jefferson County, Alabama's rate consultant and municipal adviser for litigation related to the county's bankruptcy and issuance of $1.7 billion in sewer warrants and led strategic financial planning for the City of Atlanta's Department of Watershed Management. He has more than 30 years of experience in water, wastewater and stormwater utility finance and rate-making assessments.

Lawrence Reynolds, M.D., is a pediatrician in Flint who serves as president of the Mott Children's Health Center. He received his medical degree from Howard University College of Medicine and has been in practice for 36 years. He has served as president of the Genesee County Medical Society and the Michigan Chapter of the American Academy of Pediatrics. He has been honored for his humanitarian and advocacy efforts on behalf of children from the Community Foundation of Greater Flint.

Snyder has said reconnecting with the authority is a critical step to resolving water quality issues and addressing related health concerns. It will not immediately resolve the city's problem with lead service lines or aging infrastructure. It will take time for pipes in Flint to become coated with the phosphate corrosion control.

To best protect public health, state and local authorities will continue to carry out steps outlined on Oct. 2 in a comprehensive action plan, including continued testing, the use of faucet filters and providing residents with accurate information about steps to eliminate lead exposure. The Michigan Departments of Environmental Quality and Health and Human Services are continuing to provide free water filters, free lead testing through the state laboratory for Flint water customers, and hiring additional staff to conduct health exposure monitoring for lead in drinking water.

He has served as president of the Genesee County Medical Society and the Michigan Chapter of the American Academy of Pediatrics. He has been honored for his humanitarian and advocacy efforts on behalf of children from the Community Foundation of Greater Flint.

Snyder has said reconnecting with the authority is a critical step to resolving water quality issues and addressing related health concerns. It will not immediately resolve the city's problem with lead service lines or aging infrastructure. It will take time for pipes in Flint to become coated with the phosphate corrosion control.

To best protect public health, state and local authorities will continue to carry out steps outlined on Oct. 2 in a comprehensive action plan, including continued testing, the use of faucet filters and providing residents with accurate information about steps to eliminate lead exposure. The Michigan Departments of Environmental Quality and Health and Human Services are continuing to provide free water filters, free lead testing through the state laboratory for Flint water customers, and hiring additional staff to conduct health exposure monitoring for lead in drinking water.

*Gov. Rick Snyder announces Flint Water Task Force to review state, federal and municipal actions, offer recommendations [http://www.michigan.gov/snyder/0,4668,7-277-57577_57657-367761--,00.html] *

"Experts in public health, water management, environmental protection to focus on steps to protect residents"

LANSING, Mich. – Gov. Rick Snyder today announced the creation of an independent advisory task force charged with reviewing actions regarding water use and testing in Flint and offer recommendations for future guidelines to protect the health and safety of all state residents.

Task force members include experts in public health and medicine, water management, and environmental protection from both sides of the aisle, and will be co-chaired by Ken Sikkema of Public Sector Consultants and Chris Kolb, of the Michigan Environmental Council. Also serving will be Dr. Matthew Davis of the University of Michigan Health System, Eric Rothstein, of the Galardi Rothstein Group and Dr. Lawrence Reynolds of Mott Children's Health Center in Flint.

"Transitioning back to the Detroit Water and Sewerage Department-Great Lakes Water Authority is a good first step to protecting public health in Flint, but it's not the last step," Snyder said. "Bringing in outside experts to evaluate our actions and help monitor and advise on potential changes to law, procedures and practices will be key to continuing work on the comprehensive action plan and ensuring safe drinking water for all the residents in Flint and all of Michigan."

Snyder said the administration will fully cooperate with task force members, saying he wants an unbiased report focusing on steps taken in the past and recommendations that could improve practices to ensure all residents have access to safe, clean water.

Ken Sikkema is a senior policy fellow at Public Sector Consultants, where he specializes in public finance, environment, and energy policy.
Prior to joining the firm, Sikkema served in both the Michigan House and Senate, culminating with four years as Senate majority leader. He has also served as both an adjunct and visiting professor at Grand Valley State University.

Chris Kolb is president of the Michigan Environmental Council, a statewide coalition of 70 environmental, public health and faith-based nonprofit groups. Before joining the MEC, Kolb represented Ann Arbor in the state House for six years and served six years on the Ann Arbor City Council. He has been president of the MEC for six years.

Matthew Davis, M.D., M.A.P.P., is professor of pediatrics and internal medicine at the University of Michigan Health System and professor of public policy at the Gerald R. Ford School at the University of Michigan, having joined the faculty in 2000. Davis also is a professor of health management and policy at the School of Public Health. He previously served as the chief medical executive of the Michigan Department of Community Health/Department of Health and Human Services.

Eric Rothstein is a national water issues consultant and principal at the Galardi Rothstein Group. He served as an independent advisor on the creation of the Great Lakes Water Authority. Rothstein also has served as Jefferson County,

Alabama's rate consultant and municipal adviser for litigation related to the county's bankruptcy and issuance of $1.7 billion in sewer warrants and led strategic financial planning30 years of experience in water, wastewater and stormwater utility finance and rate-making assessments.

Lawrence Reynolds, M.D., is a pediatrician in Flint who serves as president of the Mott Children's Health Center. He received his medical degree from Howard University College of Medicine and has been in practice for 36 years. He has served as president of the Genesee County Medical Society and the Michigan Chapter of the American Academy of Pediatrics. He has been honored for his humanitarian and advocacy efforts on behalf of children from the Community Foundation of Greater Flint.

Snyder has said reconnecting with the authority is a critical step to resolving water quality issues and addressing related health concerns.
It will not immediately resolve the city's problem with lead service lines or aging infrastructure. It will take time for pipes in Flint to become coated with the phosphate corrosion control.

To best protect public health, state and local authorities will continue to carry out steps outlined on Oct. 2 in a comprehensive action plan, including continued testing, the use of faucet filters and providing residents with accurate information about steps to eliminate lead exposure. The Michigan Departments of Environmental Quality and Health and Human Services are continuing to provide free water filters, free lead testing through the state laboratory for Flint water customers, and hiring additional staff to conduct health exposure monitoring for lead in drinking water.

Subject: state money for detroit water

Sara:
I was at a City Council meeting last night when Flint City Administrator Natasha Henderson said the state has only wired Flint $2 million of the $6 million approved by the state Legislature.
She said the city has been told it will receive an additional $2 million in January and another $2 million in April.
Henderson said she's asked that the money be sent immediately because the city was required to pay Detroit the entire $12 million upfront, before the water was reconnected, and its water and sewer fund balance has dropped significantly as a result.
Several council members also spoke about this, and Council President Josh Freeman called the payment plant "beyond ridiculous" given the city's financial position.
Is there someone who can talk to us about this?

Just spoke with Wayne. He has calls in to Flint and we are awaiting written confirmation that the city made the up-front payment to DWSD.

If you need to respond before we receive that (from the city admin. or the mayor) he suggests something along the lines of the following:

Our understanding of the original plan to re-connect with DWSD called for monthly payments from the city. Without consulting the State or the Mott Foundation, the city agreed to an up-front payment to DWSD (of the full amount).

Upon receiving written confirmation that the full payment was made to DWSD, the State will wire to the city, the remainder of the $6m appropriation for the reconnection to DWSD.

Changes to Flint Water System Made By Local Leaders, Not Emergency Managers
Author: Darnell Earley, ICMA-CM, MPA

It is critically important that the record be set straight about the decision-making and approval processes that led to Flint joining the Karegnondi Water Authority (KWA) with the use of Flint River water as the interim water supply. The fact is, that the river has served and been used as the back-up supply for decades, and this was the rationale given to me by staff and Mayor Walling, who also serves as chairperson of the KWA board. Contrary to reports in the media and rhetoric being espoused by individuals, the decision was made at the local level, by local civic leaders.

The decision to separate from Detroit Water and Sewerage Department and go with the KWA, which included the decision to pump Flint River water in the interim, were both a part of a long-term plan that was approved by Flint's Mayor, and confirmed by a City Council vote of 7-1 on March 25, 2013. This plan was presented to me when I was appointed as Flint Emergency Manager in October 2013 - a full seven months after City Council's affirmative vote.

Genesee County Drain Commissioner Jeff Wright also made the affirmative vote by the City Council a necessary condition of joining the KWA, and applauded the decision in a March 26, 2013 news release, saying, "…I have said from the beginning that this decision must be made by Flint's City Council and Mayor…I am glad that the residents of Flint were able to have their voices heard via their elected officials."

The Mayor's approval of the plan, and the subsequent near unanimous vote by City Council were in no way coerced, forced or demanded by the State, nor any Emergency Manager. Council's affirmative vote was supported and officially signed into EM Executive Order by then Emergency Manager Edward Kurtz on March 29, 2013. A subsequent order Kurtz signed on June 26, 2013, speaks specifically to the, "… upgrading of the Flint Water Plant to ready it to treat water from the Flint River to serve as the primary drinking water source for approximately two years and then converting to KWA delivered lake water."

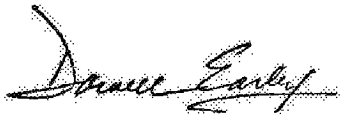
When I began my term as Emergency Manager, it fell to me to oversee the implementation of the previously accepted and approved plans, as the DWSD terminated the contract with Flint in April 2014. It did not fall to me to question, second guess or to invalidate the actions that were taken prior to my appointment.

At the time the decision was made there was no way to predict such an unfortunate outcome. I would also offer that had local leaders known then what they know now, parts of their decision may have been entirely different. What the City of Flint and the State of Michigan are now dealing with is the management of an unintended consequence resulting in a negative outcome from an otherwise sound public policy decision. There is no "blame" to affix on any Emergency Manager for that.

As the solutions are put into place to address the serious concerns at hand, I believe that everyone's attention should now turn toward another serious concern -- what is being done in the long-term to replace the aged and crumbling water distribution systems that exists throughout Flint and Genesee County, which was a major contributing factor to this serious issue in the first place.

I am a strong believer that the truth supported by fact, speaks for itself. This was a local decision that was made by local civic leaders. Anyone who says otherwise is being disingenuous for whatever reason.

Sincerely,



Darnell Earley, ICMA-CM, MPA

Dear ,

The Flint water crisis is a failure of government at every level, and I am committed to increasing transparency and finding answers to ensure that these failures never happen again. That's why I have called for an investigation into the causes of water problems in Flint.

Simply put, high lead levels in Flint's drinking water are unacceptable, and there must be accountability.

As part of my ongoing efforts, I am holding a **telephone town hall with constituents on Wednesday, October 28th, at 7 p.m. ET** to provide an update on my efforts. I'll be joined by both Dr. Mona Hanna-Attisha and Dr. Marc Edwards, who both conducted critical tests that exposed unacceptable lead levels in Flint. On the live call, we will also answer questions from Flint residents.

If you're interested in joining our conversation, please RSVP here, or fill out the form below.

What is your preferred Prefix (Mr./Mrs./Ms./Dr., etc)?

For months, I have been pressing state and federal agencies for immediate resources and action to improve and restore confidence in water quality. At the federal level, I am pushing for resources to ensure the safety of water, but also make much-needed repairs to our city's aging water system and infrastructure. *The Flint Journal* covered these federal efforts in March. You can view them here.

Additionally, I welcome the announcement recently that the U.S. Environmental Protection Agency will send technical advisors to Flint to assist the city and state. I have repeatedly asked the EPA to send these much-needed experts to help improve the water quality and hopefully restore some public confidence in the safety of our water.

Serious issues remain, and there is a long way to go before complete confidence in the city's drinking water is restored. I am committed to working to ensure that Flint residents get a thorough investigation and answers to their questions.

I hope you'll join me next Wednesday for a telephone town hall update on Flint water.

Sincerely,

Dan Kildee

PROVIDER DRAFT LETTER V.2
October 22, 2015
LoRocco Edits,Travis Edits,Attisha Edits, Peeler Edits
Cross checked with parent letter

Dear Provider:

As you may be aware from recent news reports, elevated levels of lead have been found in the City of Flint's water system.

To help protect the children of Flint from the current lead in water exposure, the Genesee County Health Department and Michigan Department of Health and Human Services are contacting you to assist you in providing guidance to support your families.

Children can be exposed to lead from drinking water in lead pipes, old lead paint, soil, pottery, cosmetics and toys and some home remedies. Adult jobs and hobbies, like auto repair, stained glass and jewelry making, and ammunitions handling can also put children at risk if they touch clothing or play in areas where lead is found.

As a primary care provider, you play a critical role in helping to ensure that children and families exposed to lead receive the care and reassurances they need to manage the potential health impacts of lead poisoning.

Identification. Children suffering from lead poisoning often fail to present outward symptoms. However, early clinical symptoms can include anemia, anorexia, abdominal pain and constipation. Lead is a neuro-toxin, and exposure can result in violent and aggressive behaviors, lead to learning disorders, may cause Attention Deficit Hyperactivity Disorder (ADHD) and has been known to reduce IQ by as many as 5-8 points with levels as low as 10 ug/dL. Lead is metabolized through the gastrointestinal system similar to iron and calcium, with uptake rates depending on the size and weight of the child. The blood half-life of lead is short (approximately 1 month) but the bone half-life can extend into decades.

Due to multiple risk factors facing many residents in the City of Flint (including aging housing conditions and water quality), we recommend that all children under age 6 living in the City of Flint or living in homes that use Flint water, attending school or childcare in Flint, or who spend time with a caregiver in the City of Flint, receive a blood lead test. Blood lead testing should be done through a child's primary care doctor to ensure adequate short-term and long-term follow-up. ***Families should be encouraged to have their children tested immediately either at their doctor's office or the Genesee County Health Department***.

Management of Blood Lead Levels. The following guidance is provided for management of childhood blood lead levels:

- **BLL < 5 ug/dL**
  - A lead level of less than 5 mcg/dL is not typically cause for concern.
  - Provide education and anticipatory guidance to ensure that lead levels do not rise.
  - Consider retesting in 12 months based on risk factors or concerns.
- **BLL >5 ug/dL**
  - **Children with capillary results of 5 ug/dL and higher must have a confirmatory venous blood draw.**
  - Families should receive anticipatory guidance, nutrition counseling, instruction on safe cleaning techniques and appropriate follow-up care from their primary care provider.
  - In-home services including case management and environmental investigations are available for all children with lead levels greater than 5 ug/dL. Refer patients to the Genesee County Health Department for this service.
  - Children with confirmed venous testing results greater than 5ug/dL within the past 18 months must be retested based on Medicaid policy and AAP guidelines. (See attached "Provider Quick Reference). If a child has not been retested within these timeframes, retesting is recommended as soon as possible.
- **BLL > 44 ug/dL.**
  - **Children with capillary results of 5 ug/dL and higher must have a confirmatory venous blood draw.**
  - Lead levels over 44 ug/dL may require hospitalization. Consult with an expert at the Children's Hospital of Michigan in Detroit for additional guidance.
  - Families should receive anticipatory guidance, nutrition counseling, instruction on safe cleaning techniques and appropriate follow-up care from their primary care provider.
  - In-home services including case management and environmental investigations are available for all children with lead levels greater than 5 ug/dL. Refer patients to the Genesee County Health Department for this service.
  - Children with confirmed venous testing results greater than 5ug/dL within the past 18 months must be retested based on Medicaid policy and AAP guidelines. (See attached "Provider Quick Reference). If a child has not been retested within these timeframes, retesting is recommended as soon as possible.

Reminder: All children covered by Medicaid must be tested at age 1 and 2.

Follow-up Care. As providers, there are steps you can take to help support your families:

1. Continue to educate families regarding lead risks and preventative steps that they can take to minimize their risks.
2. Encourage your families to use filtered water for drinking, mixing formula and washing dishes. Families can contact 2-1-1 for information on free water filters.
3. Healthy nutrition is critical for lead-exposed children. Make sure your patients are consuming balanced diets high in iron, calcium and Vitamin C. If you have concerns about their nutrition, consider recommending a multivitamin with iron. WIC and SNAP provide assistance to parents and children who need fresh and healthy foods. Contact the Genesee County WIC office at (810) 237-4537 to learn more. In addition, SNAP offers a Double Bucks program that can provide healthy foods for less.
4. Breastfeeding is highly protective and encouraged. However, if the mother's blood lead level rises above 40ug/dL or her level is greater than 20 ug/dL and the baby has a level above 5 ug/dL breastfeeding is not recommended.
5. Because lead is a neuro-toxin, children with lead poisoning need longitudinal follow-up and may require developmental and behavioral health intervention services. Continue monitoring your patients' development at every visit.
6. Consider additional wrap-around and support services that will benefit your patients such as early childhood home visiting programs, early head start and head start. Call 2-1-1 for more information.

Local Resources. Several local resources are available to you and your patients:

- Blood Testing. Patients are encouraged to contact their primary care provider for testing. The Genesee County Health Department also administers lead tests. Patients in need of transportation should contact 2-1-1 for assistance.
- Water Testing. Water testing is free through the City of Flint Water Testing Plant. Patients can call 810-787-6537 to learn more.
- WIC and SNAP provide assistance to parents and children who need fresh and healthy foods. Contact the Genesee County WIC office at (810) 237-4537 to learn more.
- Child Development. If you have concerns about a child's growth, development or learning contact 2-1-1 for a Home Visiting Program in your area.

draft 3

October 22, 2015

Dear Parent,

To help make sure the children of Flint are safe from lead exposure, the Genesee County Health Department and the Michigan Department of Health and Human Services want to help you understand:

- Where does lead come from?
- What can I do to protect my family?
- Should I get my child tested for lead?
- Where can I find more information about lead?

Where does lead come from?

Lead is a serious health hazard, especially for small children who become lead poisoned when they eat, drink or breathe lead. Elevated levels of lead have been found in the drinking water from lead pipes in the City of Flint. Kids can also be exposed to lead from old lead paint, soil, pottery, cosmetics and toys and some home remedies. Adult jobs and hobbies, like auto repair, stained glass, jewelry making and ammunitions handling can also put children at risk if they touch clothing or play in areas where lead is found.

Should my child get a blood lead test?

Children who live in the City of Flint, live in a home using City of Flint water, or who attend school, childcare or often spend time with a caregiver in the City of Flint should be tested for lead poisoning. *This should be done as soon as possible.*

Where should I go to get a blood lead test for my child?

The best place to get your child's blood lead test is your doctor's office. Your pediatrician will follow up with you on lab tests and provide you with information on what to do next. You can also have a lead test at the Genesee County Health Department. If you need transportation, contact 2-1-1 for help.

Understanding your child's lead test result.

A lead level below 5 means there is little or no lead in your child's blood. Use the tips below to help keep your child safe. Your doctor may suggest retesting your child within the next 12 months to make sure the level does not go up.

Draft 5

A lead level of 5-14 means that your child has had some exposure to lead. Work with your doctor and local health department for further guidance on how to limit your lead exposure. Your doctor may retest your child in 1-3 months to make sure the level does not go up.

Children with very high levels of lead **(over 40)** may require treatment at the hospital.

What Can I Do to Keep My Family Safe?

The following steps should be taken right away to help protect you and your child.

Protecting your family from lead in the water:

- Get your water tested for lead. It's free. Call 810-787-6537 to learn more.
- Use a water filter in your home. Call 2-1-1 for information on free water filters.
- If you do not have a water filter, use bottled water for drinking and mixing formula.
- When cooking or washing the dishes use filtered water. If using unfiltered water, run the water for at least five minutes before you use it.
- Always use cold water when cooking.

Safe cleaning:

Safe Cleaning is Important. Keeping your home clean and safe from lead hazards will help to protect your family.

- Keep children away from lead paint and dust.
- Use wet paper towels to clean up lead dust. Be sure to clean around windows, play areas and floors.
- Wash hands and toys often, using soap and water

Good nutrition:

Some foods will help keep lead from being stored in a child's body. These are foods with a lot of calcium, iron and vitamin C. These foods include:

Calcium Rich Foods	Iron Rich Foods	Foods with Vitamin C
➢ Milk	➢ Beans	➢ Oranges
➢ Cheese	➢ Lean meats like fish and chicken	➢ Orange juice
➢ Yogurt	➢ Whole grain cereals	➢ Grapefruits
➢ Tofu	➢ Peanut butter	➢ Tomatoes
➢ Spinach		➢ Green peppers

Always wash your fruits with filtered water. If you are concerned about your child's diet, talk with your pediatrician who may also recommend a daily multivitamin.

Draft

WIC and SNAP provide assistance to parents and children who need fresh and healthy foods. Contact the **Genesee County WIC office at (810) 237-4537** to learn more. SNAP also offers a Double Bucks program to purchase even more healthy food for no additional costs.

Where can I get more information on lead?

Subject: Robin Erb Interview - Dr. Wells

Hello –

Today Dr. Wells had a phone interview with Robin Erb regarding blood lead levels in Flint. Robin said she's hearing concern from parents who feel like they don't know what to do. Robin heard about the parent letter and wanted to know what it contains, when it will be going out, and what other steps we're taking to provide clear direction to residents. Dr. Wells confirmed that yes, we are working with the local health department to finalize a letter that will be distributed to parents in the next couple of days. Dr. Wells reminded her of the www.michigan.gov/flintwater website that has been up since the first week of October, and said that many of those documents are being distributed through various channels by our partner and provider networks. She also acknowledged that in some areas this can be a difficult to reach population, and so it's important that we think creatively about how to reach them – that we cannot rely solely on the news or internet. Dr. Wells emphasized that our priority population is children 0 – 6 years old, which is why the parent letters will be so beneficial.

Once the letter is ready to go, I told Robin we would share it with her. This is for a Sunday story.

Subject: Journal and Darnell's guest column.

http://www.mlive.com/news/flint/index.ssf/2015/10/ex-emergency_manager_says_loca.html#incart_river_home

Interesting that instead of running Darnell's guest column as a guest column, the Journal instead calls it a "statement" and runs two paragraphs of it, instead allowing the others to continue criticizing Earley.

Curious why they would take that approach on this when they run intact guest columns from just about anyone else. Seems to me that after the near-daily attacks, the fair thing would have been to run his full statement in the way it was intended.

He should complain.

Bryn and Ron,

Please help. We're confused by the part of my statement that directly addresses the concerns raised by Rev Bulloch was omitted from the story.

Rev. Bulloch says: "There doesn't seem to be a sense of urgency around responsibility and accountability" for Flint's water emergency, Bullock said.

The omitted part of my quote says: "The task force expects to complete its work within three months. It would be premature to take any action until after the task force submits its report."

Leaving this out appears I was dodging the question. I instead addressed it head on. Can you please add that important detail to the story?

Thanks,

Dave

Subject: RE: change agent consortium

We had a good, respectful meeting with a small group from Flint that included pastors, concerned residents and Councilman Mays.

Gov. Snyder has assembled a third-party task force that includes respected experts in public health, water management and environmental protection for an unbiased review of all actions of the city, state and federal governments regarding water use and testing in Flint.

That task force is expected to look at what occurred as well as make recommendations for what should happen moving forward because we believe that Flint residents need clean, safe water. The task force expects to complete its work within three months. It would be premature to take any action until after the task force submits its report.

Meanwhile, the Department of Environmental Quality and the Department of Health and Human Services continue to work with city leaders, educators and residents to continue testing and carrying out other aspects of the governor's action plan.

Dave: I just spoke to Rev. Bullock, who said he spoke with you as his group called for the governor to fire Dan Wyant today.
We also have some video from our Lansing hub.
The pastor indicated the group raised questions with you about the task force on Flint water and said he left the conversation feeling, "There doesn't seem to be a sense of urgency around responsibility and accountability."
Would you want to comment on the group's request and/or your conversation with them today.

Subject: RE: reporter inquiry

Specific questions: Is the DEQ aware that nearly 90 percent of Flint's water samples submitted from the first half of this year are not Tier 1 test sites?
City officials have said they distributed water bottles in collecting samples without regard for whether homes had lead service lines. Is that an acceptable collection procedure?
Is the state developing any guidelines for Flint and/or other communities about collection methods to insure the homes at the highest risk of high lead levels are the ones tested in the future?

Subject: NPR Interview-Road Salt

Today I was interviewed by Rebecca Thiele of public radio WKAR-Kalamazoo.
The interview was prompted by the findings of Western Michigan University, Carla Koretsky, regarding the impact of road salt on a small deep kettle lake within the City of Kalamazoo. We are funding a CMI monitoring grant for Dr. Koretsky to conduct additional assessment of several urban lakes and the associated watersheds. I provided the reporter with the 2 attached reports and the link for a another report prepared by the USGS (http://pubs.usgs.gov/sir/2011/5233/). These reports all have sections devoted to chlorides and correlate high chloride concentrations in lakes and streams with urban land use.
Questions-roughly & answers- briefly-no particular order

1. From the 2007 NLA report, Mi lakes have higher conductivities and chloride concentrations than lakes nationally and within the upper Midwest ecoregion. Why? Speculated that compared to the rest of nation, particularly compared to the southern states, we have more sources including road salt. Compared to other states in the upper Midwest ecoregion we have more lakes in urbanized watersheds.
2. Will monitoring be conducted at other Kettle Lakes with urbanized watersheds to document the extent of the problem? Acknowledged that elevated chloride levels have been documented in urbanized areas of Michigan and concentrations in Woods Lake in Kalamazoo are problematic which is why we are funding additional work to document the extent of the problem and sources. We will routinely continue to monitor Michigan's resources for chlorides but the site specific nature of the problem precludes specific sampling for the issue. We do not have a Water Quality Standard for chloride but we have not identified toxicity issues where elevated concentrations have been found.
3. Will construction of roadside retention ditches solve the problem? Explained that best management practices for the typical NPS pollutants our agency addresses may not be appropriate for salt. I made sure the reporter had a contact in MDOT.

Air date for the story is unknown.

Subject: RE: FW: EPA Region 5 to Audit State of Michigan's Drinking Water Program

DEQ welcomes this announcement from EPA, and we've already signaled to them that they can count on our full cooperation and transparency.
We've appreciated the federal government's support on the situation in Flint -- including its announcement last week that the Lead and Copper rule speaks ambiguously on the corrosion control issue. Nobody wants to see a situation like Flint, and we look forward in working with our federal partners going forward because we share the goal of making sure the Flint situation is not repeated -- in Michigan, or anywhere else.

EPA Environmental NEWS RELEASE

EPA Region 5 to Audit State of Michigan's Drinking Water Program

Contact Information: Anne Rowan, rowan.anne@epa.gov 312-353-9391

For Immediate Release No. 15-OPA167

CHICAGO (November 10, 2015) -- U.S. Environmental Protection Agency Region 5 Administrator Susan Hedman today announced that the agency will conduct an audit of the Michigan Department of Environmental Quality (MDEQ) drinking water program. Region 5 will examine MDEQ's implementation of the Safe Drinking Water Act and related rules on lead and copper, total coliform, nitrates and ground water.

"EPA is conducting this audit to ensure that MDEQ maintains reliable drinking water supplies that meet all of the requirements of the Safe Drinking Water Act," Hedman said. "This comprehensive audit will provide Flint residents and the people of Michigan with more information about MDEQ oversight of public water supplies and will identify actions that may be needed to strengthen the Michigan drinking water program."

During the audit, EPA Region 5 staff will go to MDEQ offices to review state files on public water system compliance with the Safe Drinking Water Act. EPA will also review MDEQ oversight of public water systems. The audit will consist of a full programmatic review that supplements the reviews of the Michigan drinking water program that EPA conducts each year.

The on-site audit will take several months. As soon as it is complete, EPA will prepare an audit report and make the report available to the public.

Ron, here's the EPA link to its page on requirements for schools. I excerpted and bolded the important language. Schools that are part of a municipal supply don't have separate requirements. Those that have their own building water supply are already subject to all the SDWA requirements.

If there's a requirement for education and outreach, perhaps DHHS would know. I've included them here to loop them in.

Our folks are still looking into this, but the day is growing late. If I come up with something further, I'll share it along.

http://water.epa.gov/infrastructure/drinkingwater/schools/upload/2006_1_11_schools_lead_sqrg_lcr_schools.pdf

*"Schools and child care facilities **that have their own water supply** **and are considered non-transient, non-community water systems (NTNCWSs)** (emphasis added) are subject to the Lead and Copper Rule (LCR) requirements.*

The LCR was developed to protect public health by minimizing lead and copper levels in drinking water. The most common source of lead and copper in drinking water is corrosion of plumbing…"

Sent: Monday, November 16, 2015 12:23 PM
To: Wurfel, Brad (DEQ)
Subject: nrdc/aclu lawsuit

Brad:
I've asked Dave Murray for a comment on the notice of intent to sue that was filed this morning by the ACLU/NRDC, naming officials from the state and city as potential defendants.
Separate from the story about the potential legal action, I'm following up on an allegation that's specific to the DEQ on page 14.
The notice says the SDWA requires each state to establish a program "to assist" schools and day care centers in "testing for, and remedying, lead contamination in drinking water."
The notice says test results must be made available at schools, with notification to parents and teachers.
It says Michigan does not maintain such a program, which is in violation of SDWA's schools provision.
Can you or someone from the department talk to me about this claim?
Thanks,

Hi Andy: Why did the state and city opt to go with KWA for Flint water supply when the study you commissioned from Tucker, Young, Jackson, Tull found that going with KWA would be more costly than staying with DWSD? (Here is excerpt from p. 17):

"Based on the analysis, it is prudent to assume the KWA water supply option costs would be somewhere

between the KWA-1 and KWA-2 options. Therefore, the analysis indicates that the two DWSD options

of supplying 8 MGD on a maximum day and up to 8 MGD on average are the least cost options for Flint.

These options allow Flint to maximize the use of existing assets; the City of Flint's (the Flint WTP) and

DWSD's (the existing 72-inch main)."

How would you describe your role in the chain of decisions that led to Flint drawing its water supply from the Flint River?

The Flint City Council opted to go with the KWA on the evening of March 25, 2013. Your schedule shows you had a 5 p.m. phone conversation at 5 p.m. that day with Dennis Muchmore "regarding Flint Water Supply alternatives."

The next day, March 26, 2013, your schedule shows a 9 a.m. meeting at Treasury "regarding Flint water, a 1:30 p.m. phone call with Dan Wyant "regarding Flint/KWA," and a w p.m. meeting in Lansing with Flint Mayor Dayne Walling?

What do you recall about these conversations/meetings? Did Muchmore sign off on the switch to KWA on behalf of the governor?

Thanks, Paul Egan

Talked with Gov about this briefly. He def indicated preference waiting until early next week to ensure best messaging and outreach.

They took this long - let's get this right.

I don't think this should happen today at all. Governor is at an important event in Southeast Michigan this morning, and I think we need some direction from him and others on this issue.

Subject: Flint blood level data

Good evening, MDHHS friends,

Here are suggested changes to the press release. I think it's vitally important to have our "people first" approach, and be very up front about the results. I also think it's important to show up high what we will do with this data. Please consider the changes. I also think it's worth a conversation about whether we want to release this on a Friday morning. This is a challenging situation to be sure, but I think these results are fairly encouraging considering some of the heated rhetoric on this issue.

Thank you,

Dave

FOR IMMEDIATE RELEASE CONTACT: Jennifer Eisner
DRAFT
(517) 241-2112

MDHHS releases October data outlining blood lead levels in Flint

Results show 24 of 963 people tested had elevated levels

LANSING, Mich. – Blood lead level testing results released today revealed that 24 of 963 adults and children tested in Flint in October had elevated levels, according to the Michigan Department of Health and Human Services.

MDHHS is working closely with the Genesee County Health Department to reach out to families testing with higher levels and help them reduce their exposure to lead sources.

Information was gathered from tests administered citywide to 963 children and adults between October 1 and October 30. Eighteen people age 17 or younger had elevated blood lead levels. Six adults over the age 18 were identified with elevated blood lead levels.

The report is intended to inform residents about blood lead level testing efforts in Flint and provide cumulative total numbers.

"Our goal is to help families reduce their exposure to lead sources," said Dr. Eden Wells, chief medical executive with the MDHHS. "We have made progress in testing and identifying those with elevated blood lead levels, and the department will continue to work closely with county health department to reach these families. We will update these numbers on a regular basis and remain diligent in our ongoing outreach and education."

The data in the report include the total number of tests conducted and the total number of elevated blood lead levels greater than 5 micrograms per deciliter, and captures both capillary and venous blood tests. People who have had multiple tests are counted only once. The full report is posted online at www.michigan.gov/flintwater and will be updated as more data becomes available.

The testing is part of the state's action plan to address health concerns related to Flint's water infrastructure.

Last month, MDHHS collaborated with the county health department and local partners to distribute educational resources and informational letter to Flint parents regarding lead testing. GCHD nursing staff are conducting direct outreach to families when an elevated blood lead level has been detected, serving as an important resources by addressing questions and concerns, providing information, and meeting them in their home environment.

MDHHS continues to provide free water filters and replacement cartridges to Flint residents at four locations including the MDHHS Flint offices and the Genesee County Community Action Resource Department. For a full list of locations and hours of distribution, visit www.michigan.gov/flintwater.

To help residents properly install water filters, and to demonstrate how to replace the original when it expires, MDHHS has created an instructional on the MDHHS YouTube channel. For additional updates on Flint water including updates on blood lead levels and testing results, visit www.michigan.gov/flintwater.

I am providing my comments below based on my memory of events that transpired over two years ago. I have not reviewed the reports, emails, memos relating to these events and my recollections would likely change after refreshing my memory with the relevant documents.

First, it is important to understand Flint's decision to join the KWA was a separate and distinct decision from using the Flint River. After we signed off on Flint joining the KWA, Flint was to negotiate with the DWSD regarding using their water during the construction of the KWA. If they were unable to negotiate a fair deal, I recall their back up plan was to use the Flint River. I don't recall Treasury being involved in the negotiations with DWSD or being advised that the negotiations broke down and Flint switched to the Flint River.

Treasury held two and possibly three lengthy meetings to go over the Tucker Young report with the DEQ. The DEQ didn't agree with TY's report and identified several flaws in their assumptions which TY was unable to refute. The reason for the multiple meetings was to make sure our siding with the DEQ over TY was the correct decision. The reports were dependent upon engineering/construction related issues which were not the forte of Treasury so we relied on the advice and counsel of both TY and DEQ where the appropriate expertise resided to assist us in making this decision.

TY's largest customer was the DWSD and DWSD did not like the KWA project. We didn't assume that factored into the TY findings but it was on our radar. We didn't believe the DEQ had any agenda so their conclusion together with TY's reliance on some flawed assumptions, led us to side w/ the DEQ's opinion. The flawed assumptions related as best I can recall on redundancy requirements that TY assumed the DEQ would demand which the DEQ said would not be required. Once eliminated, the TY reports findings were undermined.

I recall Treasury needed to approve the EM's decision to join the KWA (again not to approve Flint using the Flint River).

I recall we were getting a lot of pressure from County and City officials to approve Flint joining the KWA. The decision had a deadline because whether Flint joined the project affected the size of the pipe that would bring in the water and the KWA needed to know if Flint would participate to purchase the correct pipe size.

I recall advising the Governor's office of these events because my initial instincts were not to authorize Flint joining the KWA for two reasons: 1) Flint was not in a financial position to assume any financial risk re: the project; and 2) Detroit was also in financial distress and I didn't think DWSD losing approximately 5% of their revenues was a good thing for them.

Because I thought Treasury would go against local sentiment that heavily favored KWA, I thought the Governor's office should be aware of the potential political fallout.

I also wanted the Governor's office involved because I didn't think Treasury had the expertise to make this decision and as such we would need help from the DEQ and I wanted them to support the collaboration between the two departments.

I never received any pressure from the Governor's office to decide one way or the other on approving the KWA. We followed the process described above and made a decision based upon what we thought was in the best interests of Flint. The decision to support KWA was influenced by our conclusion that there was no financial risk to Flint for the project and the DEQ's

conclusion that it was more economical for Flint to join KWA (again a separate and distinct decision from using the Flint River). The fact this conclusion was what the local officials wanted was a bonus.

I don't recall specific conversations on the dates and times you referenced. I do know there were many discussions regarding this topic between Treasury, DEQ and the Governor's office and the facts and circumstances re: KWA led to a clear consensus that the state should not block Flint's desire to join the KWA.

Michigan leaders announce action plan for Flint drinking water

Local, state and federal leaders today announced a comprehensive action plan for drinking water in Flint, designed to address both the short- and long-term needs of residents.

Gov. Rick Snyder, the Michigan Departments of Environmental Quality, and Health and Human Services, the Environmental Protection Agency, and the City of Flint released an~~The~~ action plan focuses on increasing water testing, offering additional precautions for families with lead plumbing in their homes, and providing long-term solutions to address the city's water infrastructure.

"We are deeply concerned by the lead results we are seeing in parts of Flint," Snyder said. "Although we know the water leaving Flint's drinking water system is safe to drink, some families with lead plumbing on their property experience higher levels of lead in the water that comes out of their faucets. We are concerned for those families, and we created this action plan to address their immediate needs as well as the long-term needs of all Flint residents."

The city and the state also are working together to gather more data to ensure the water that leaves the treatment plant as well as the water that arrives in Flint homes is safe for all residents. The plan includes:

- Immediately test Flint public schools to ensure that drinking water is safe. Testing also will be available at no cost to any other school in Flint.

- Expand health exposure testing of individual residences.
- Offer water testing at no cost to Flint residents to assure water is safe.
- Begin optimizing corrosion controls in the Flint drinking water system.
- Convene a "Safe Drinking Water Technical Advisory Committee" to ensure the best technology, practices and science are being utilized, and add an expert from the EPA's Office of Research and Development to the group.
- Accelerate water system improvements to address replacement of lead service lines.
- Expedite completion of Karegnondi Water Authority.
- Gov. Rick Snyder names Dr. Eden Wells as the Flint Drinking Water Public Health Advisor.
- Provide water filters to residents of Flint.
- Expand a comprehensive lead education initiative.

In addition to the action plan, zip code-level data does show that there has been an increase in elevated childhood blood lead levels in specific communities. Initial analysis of MDHHS data found that blood lead levels of children in Flint have followed an expected seasonal trend. While this analysis for Flint as a whole remains true, after a comprehensive and detailed review down to the zip code level, MDHHS data state analysis is consistent with that presented by Hurley Children's Hospital.

"While we cannot conclusively say that the water source change is the sole cause of the increase, this analysis supports our efforts as we take active steps to reduce all potential lead exposures in Flint," said MDHHS Director Nick Lyon. "As part of this, we are working closely with our public and private partners to provide Flint residents with water filters and educate families about the steps they can take to reduce all lead exposures in their home."

Local, state and federal leaders announced the plan at a press conference today at Kettering University's Innovation Center in Flint. Participants included:

- Harvey Hollins, Director of Snyder's Office of Urban Initiatives
- Dan Wyant, Director of the Michigan Department of Environmental Quality
- Nick Lyon, Director for the Michigan Department of Health and Human Services
- Dr. Eden Wells, Flint Drinking Water Public Health Adviser

- Dayne Walling, Mayor of Flint

"This action plan offers concrete steps we will take in a local, state and federal partnership to ensure all Flint residents have safe water to drink," Wyant said. "The DEQ will work closely with the city to gather further data to ensure the water that leaves Flint's system as well as the water that arrives in Flint homes is safe to drink."

To have your water tested, call 810-787-6537 and press 1, or email flintwater@cityofflint.com. For more information, visit www.michigan.gov/flintwater.

Sigh of relief and good news on stream.

Also, Mott comms apparently said their building team recommended the name that appears on the outside of the building to help avoid confusion, which has a slightly revised address too.

Commerce Center/Mott Foundation Building - Conference Center, Ground Floor
519 S. Saginaw Street

We should add note about credentialed media as well.

Team—

Below is the media advisory for tomorrow. The Livestream portion is highlighted because we are still checking to make sure the venue has livestreaming capabilities.

Wednesday, Oct. 7, 2015
Contact: Sara Wurfel or Dave Murray
Office: 517-335-6397

Editor's note: Media must present valid press credentials on site.

Thursday, Oct. 8 at 10 a.m.
Gov. Rick Snyder will make an announcement regarding the Flint water system. He will be joined by Flint Mayor Dayne Walling, Director of Environmental Quality, Dan Wyant, Director of the Department of Health and Human Services, Nick Lyon, Dr. Eden Wells, Chief Medical Executive at DHHS, and Ridgway White of the Charles Stewart Mott Foundation.

A livestream option is also available at [redacted]. If you wish to embed the event please visit [redacted] for more information.

Location:
Mott Foundation Building – Ground Floor
503 S. Saginaw St.
Flint, MI

Thursday, Oct. 8 at 7 p.m.
Snyder will offer remarks at the Celebration of Life Gala supporting Magen David Adom (Israel's national 911 and emergency services).

Location:
Adat Shalom Synagogue
29901 Middlebelt Rd.
Farmington Hills, MI

Subject: Follow-up questions re: Flint water

Hi Sara and Dave,

I asked the Governor some questions about this in the Detroit scrum this morning. He told me everybody is still working on it, no specifics,waiting on "getting all the facts," but something should be announced this week.

I do understand that, but it does raise a couple of other question in the meantime:

--What "facts" are you still trying to get? What, specifically, is the factual dispute here at this point?
--Even if we don't have specifics yet, how much responsibility do the Governor and state ultimately bear for fixing the whole problem? Especially since the city had an EM when the water switch was made?

Thanks so much,

Sarah

Senate Minority Leader Jim Ananich Urges Governor, State Action in Flint

FLINT, Mich.—Senate Minority Leader Jim Ananich (D-Flint) issued the following statement:

"My constituents and I believe the state must act urgently to provide concrete solutions to the public health crisis in the City of Flint. In speaking with Governor Snyder and his key aides today, I stressed the need to work together on a number of initiatives that will ensure safe water for Flint residents.

"My formal request included immediate and long-term solutions, including strong consideration for switching back to the Detroit water source until the Karegnondi Pipeline Authority project is complete. Anything less than an aggressive, comprehensive approach is simply unacceptable."

A copy of Senator Ananich's letter to Governor Snyder can be viewed here.

Subject: FW: FOR IMMEDIATE RELEASE: Senate Minority Leader Jim Ananich Urges Governor, State Action in Flint

Sara,
Got a deadline question here about Senator Ananich's letter to the governor. Does he support having the city switch back to Detroit water until the Karegnondi pipeline is complete? Is there a plan being put together by the administration to deal with these elevated levels of lead in Flint children found by researchers at Hurley Medical Center? Can your characterize the governor's conversation with Senator Ananich today? Did he make any kind of commitment to take action?

Subject: RE: Flint Water

Hi there Ryan –

Gov. Snyder spoke with Sen. Ananich this morning about how the state can continue working with Flint city leaders. We believe protecting public health is paramount and safe, clean, accessible drinking water is essential . That's what we are focused on helping ensure and deeply share the Senator's commitment to helping address the issue. We just received the letter from the senator and are reviewing his ideas.

The governor and state agencies have been closely working with Flint leaders on their infrastructure challenges for months, including providing $4.2 million in grants and restructured loan financing to provide resources needed to locate and fix infrastructure problems and add the carbon filtration system, additional testing and helping identify and provide filters.

It's also important that people have accurate information about their health and water. The MI Depts of Environmental Quality and Health and Human Services are testing water and working with local agencies and Flint residents on issues related to what they can do if they have concerns about the pipes in their homes.

Thanks and hope this helps.

I want to second Nancy's disappointment with the lack of response to our questions here.. We are asking about a major public health situation in a major city...

At minimum, I'd like to see our queries answered today; it might even make sense to get some time with the governor to discuss...

I doubt this is an issue that we are likely to lose interest in anytime soon.

Hello Ryan,

Gov. Snyder continues to work with Sen. Ananich and others about the concerns raised about Flint's water and the city's challenges with its infrastructure. We are working closely with federal and state agencies as well as city leaders and we expect an announcement about some additional steps later this week.

Gov. Snyder believes all state residents to have access to clean, safe water.
The governor and the state agencies have played a highly visible role in working with Flint city leaders with their infrastructure challenges -- and will continue to do so. We understand why people are frustrated, and also want to make sure people have accurate information and know where they can go if they have questions about their health and the water connections in their home. The health and safety of Flint residents is always the first priority, and that includes ensuring there is clean, safe drinking water -- especially for children.

We're working to build upon existing state efforts to work with Flint leaders on their infrastructure needs. The state so far has provided $4.2 million in grants and restructured financing to help the city locate and fix some of the problems with its water infrastructure and add the carbon filtration system. Several state agencies continue to work with Flint leaders on their water challenges including through Mayor Walling's technical advisory board. That board includes outside experts and members will study data and offer recommendations.

The Department of Environmental Quality and the Department of Health and Human Services also are testing water and working with Flint residents on issues related to what they can do if they have concerns about the pipes in their homes.

It's important to remember that the emergency manager had the final say on making the change, but did so at the strong urging of Flint city leaders.

Decisions about changes to the water system were not forced upon the city. Emergency managers often try to work closely with mayors and city councils, getting recommendations from the local communities they are serving. The decision to make the switch to the Karegnondi pipeline came after an 8-1 vote by the City Council and strong endorsement by the mayor and Genesee County leaders. The move also came after a series of upgrades to Flint's water treatment plant.

It's also important to remember that switching back to Detroit water will not necessarily have the effect that some expect. Flint has long-term challenges with its water infrastructure that need to be addressed.

I urge you to contact Angela Minicuci at MDHHS, who can discuss how state blood test data is different than what has been reported.

Dave

Subject: RE: Grant

I'm a little confused about this press release … it sounds like the majority of that grant is to replace an incinerator, and $900k is create a map of leaks in pipes so that the city can prioritize repair, and provide a pipe thickness assessment that will contribute to the city's water main replacement program … was any of this directly prompted by the existence of lead and copper pipes, and the impact to those pipes of the more-corrosive Flint River water?

Hi there Jim –

Would say this issue is one that we've been actively engaged on and our administration will be outlining a collaborative, comprehensive action plan tomorrow afternoon. We believe protecting public health is paramount and safe, clean, accessible drinking water is essential . That's what we are focused on helping ensure and working together across local, state and federal levels to bring all resources and ideas to bear.

Would add that the governor and state agencies have been closely working with Flint leaders on their infrastructure challenges for a while, including providing $4.2 million in grants and restructured loan financing to provide resources needed to locate and fix infrastructure problems and add the carbon filtration system, additional testing and helping identify and provide filters.

Hope that helps.

Thanks and best,
SW

That's absolutely right, Damon.

You and the station should have gotten a media advisory from the DEQ and DHHS teams. A cut and paste version is below just in case. This event is for media only.

Also, for your planning purposes only, we're looking at hosting a conference call with the Governor to walk through some highlights on a fully EMBARGOED (all hold and not reported/aired until the press conference begins) basis. Please let me know if that's workable and WJRT agrees to that. And if so, who would be representing the station.

Michigan leaders to announce action plan for Flint drinking water

Friday, Oct. 2 at 1:30 p.m.
Local, state and federal leaders will host a press conference to announce a comprehensive action plan for addressing drinking water concerns in Flint. Participants will include:

* Harvey Hollins, Director of the Office of Urban Initiatives for Gov. Rick Snyder
* Dan Wyant, Director for the Michigan Department of Environmental Quality
* Nick Lyon, Director for the Michigan Department of Health and Human Services
* Dr. Eden Wells, Chief Medical Executive for the Michigan Department of Health and Human Services
* Dayne Walling, Mayor of Flint
* Other local, state and federal officials

Location:
Kettering University, Innovation Center
1300 Bluff St.
Flint, MI 48504

This is a media event open to credentialed news media only. Media who plan to attend this event should RSVP by noon Friday. Contact Rosemarie Olszewski at 517-284-6700 or olszewskir@michigan.gov.

Sara or Dave,

Quick follow-up question: In reference to the plan to immediately test water coming out of the faucets of all schools in Flint Community Schools, will the water at Flint's public charter schools be tested as well? I don't have an exact count, but I'm guessing there are a half-dozen or more charter schools in Flint.

Hi there Jim and Chad –

Per earlier conversations, below is information for a media conference call with Gov. Snyder and Cabinet leaders – MI Dept of Environmental Quality Director Dan Wyant of the, MI Dept of Health & Human Services Director Nick Lyon of the, and Dr. Eden Wells, the state's Chief Medical Executive – to outline a comprehensive action plan to further address Flint water concerns.

They will also be available to answer Qs.

As agreed by you and your team, this information is fully embargoed until when the 1:30 p.m. press conference later today in Flint begins.

SPECIFIC CALL-IN DETAILS:
Topic: Flint water action plan
Date: Friday, Oct. 2
Time: 11:15 a.m.
Conference Line call-in number: PPI

Conference line passcode: PPI
** To ask a question during that portion of the call, please press "0." (but please refrain from pressing zero until opening remarks are completed to help ensure you don't miss any of the details).

****NOTE**:** This invitation is for planning purposes only and meant for you and/or your outlet as there are a limited number of participant lines. Please let us know if you wish to have someone else participate so we can work to accommodate.

Please let us know if who from Detroit News plans to participate or if you need anything else at all in interim.

Thanks so much,
SW

Sierra Club Calls For Urgent Action on Snyder Water Plan, Probe of Michigan Department of Environmental Quality

FOR IMMEDIATE RELEASE

Friday, October 2, 2015

Media Contact: David Holtz, david@davidholtz.org/313-300-4454

LANSING—Sierra Club today called on Gov. Rick Snyder to act decisively and urgently to implement plans to end the public health crisis in Flint and to support an independent

investigation into the Michigan Department of Environmental Quality's oversight of federal drinking water laws.

"Given the clear risks to vulnerable populations and the state's public health responsibilities this is a time for strong leadership and accountability from state public health authorities and the governor," said **David Holtz**, **Sierra Club** Michigan Chair. "The governor, finally, is assuming direct responsibility for responding to a crisis that every day is damaging the health of Flint's children. His actions should be much stronger, however, and he needs to find out how we got to the point where Flint children are drinking lead and what the MDEQ's role was in those decisions and actions."

The Snyder administration today outlined a series of steps they will take to address Flint's public health crisis. They include accelerated and expanded water treatment, providing filters to some residents, expanded testing of residents and an examination of whether to temporarily switch back to the Detroit water system. Replacing Flint's lead pipes over time were also on the administration's to-do list.

Sierra Club Michigan Director **Gail Philbin** said only independent testing of Flint's water for lead will be credible because of questions raised regarding the city and MDEQ's handling of past test results.

"Parents need to know drinking water is safe for their children," said Philbin. "Immediately they need credible testing for lead and alternatives to contaminated water. The likely best way to ensure safe drinking water in Flint is to change to a safe and reliable drinking water source and that's Detroit's water system and to eliminate lead pipes."

Investigations by the ACLU and nationally recognized drinking water expert Marc Edwards at Virginia Tech University have pointed to failures in testing and enforcement of federal drinking water standards by the Michigan Department of Environmental Quality. An MDEQ spokesman reportedly attacked Virginia Tech's results and complained about the "near-hysteria" over Flint's water supply. The Virginia Tech researcher documented what he called "mistakes and deception" involving the MDEQ's handling of Flint's drinking water problem.

"Along with ensuring Flint residents aren't drinking lead, we need for the governor to ensure that the public gets answers to what happened and why we ended up with a public health crisis in Flint," said Holtz. "That will require an independent investigation. If that's something Governor Snyder is unwilling to do we need federal authorities to determine to what extent, if any, state officials who are responsible for implementing federal drinking water standards are accountable for the public health crisis in Flint."

The Greater Flint Health Coalition, a group of health professionals in the Flint community, has concluded that Flint's drinking water is unsafe because of elevated lead blood levels. The city of Flint began using the Flint River as a water source in April 2014 following a decision made by emergency manager Darnell Earley.

Centers for Disease Control and Prevention studies show that lead in drinking water can cause serious health problems and that the greatest risk of lead exposure is to infants, young children and pregnant women. Scientists have linked the effects of lead on the brain with lowered IQ in children.

Subject: RE: national guard water tanker suggestion

Ron,

The governor's comprehensive action plan is in effect to ensure Flint residents have access to safe, clean water. State agencies and the governor's office continue to work in Flint with local leaders and organizations on a variety of approaches to give Flint residents accurate information about their homes and health, and provide assistance where needed.

Any requests for the guard would start with the FEMA local emergency manager. That local person already is working closely with the Michigan State Police, the United Way and other community groups to provide city residents with assistance as we help city leaders with their water infrastructure challenges.

Dave

Nora --

Would say that we believe protecting public health is paramount and safe, clean, accessible drinking water is essential. The Governor and Administration, through both DEQ and the MI Dept of Health & Human Services, have outlined a collaborative, comprehensive action plan to help ensure just that as well as public confidence, and that we're all working together across local, state and federal levels to bring all resources and ideas to bear.

Thanks and best,
SW

Subject: Follow-up questions
Importance: High

- Reviewing my notes, I'm not sure I got a definitive answer from Wyant about corrosion control at the Flint water treatment plant.
  Was corrosion control in use? I'd like a simple yes or no, here – if no, obviously, why not – if yes, what was it, and why was – if any – what sounds like a lesser degree of corrosion control being used? I would like the names of the specific technologies/chemicals that were in use in the past, if in fact corrosion control was being used at the Flint plant, and the specific technologies that will be used going forward.
- Was the MDEQ unaware that there were aging lead service lines in Flint, and that those would increase the lead risk? Were the Flint water treatment folks? Why was this not taken into account in developing the water treatment plan?
- Wyant said that "two consecutive back to back tests" showed there was a problem; when were those tests performed and when were the results available?

Obviously I would like to use this information in a piece we'll have ready to go at 1:30p so ASAP would be great.

Sara -

I've attached what I've written on Ananich's comments on the podcast. Let me know how you want to respond. Appreciate it!

Kyle

Ananich: Feels Like State Is Dragging Its Feet Because Flint Is Poor

Senate Minority Leader Jim **[ANANICH]** (D-Flint) said he doesn't know why state officials are not aggressively pushing to hook Flint's municipal water supply back to the Detroit Water and Sewerage Department (DWSD), but it feels like the city's impoverished residents is a factor.

State and local officials said Friday they would be testing more Flint water and sinking $1 million more in filters to address higher lead levels in the water coming from the city's relatively new water source -- the Flint River (See "State Plan For Flint Water Includes More Testing, $1 Million For Filters," 10/2/15).

http://www.mirsnews.com/capsule.php?gid=4683#44579

Previously, Flint residents had been receiving their water from DWSD from 1968 to 2014 until the Flint emergency manager, at the urging of many community leaders, made the switch as a cost saving measure until a pipeline carrying "raw" water from Port Huron was finished.

Ananich was asked he believes this type of situation would still be going on if questions were raised about the quality of water in West Bloomfield or Birmingham -- two of the state's more affluent areas.

"No, I think it would have been resolved a long time ago," Ananich said. "There's this saying about people in Flint that we're resilient.

"But at what point in time is it acceptable that we have to be resilient over things that in 21st Century in the most advanced country in the world surrounded by the freshest water in the world that we have questions about whether we are poisoning our kids? It's just unacceptable to me."

Asked to respond to whether efforts to move Flint back to the DWSD water -- which didn't react to the lead in Flint's pipes, causing the elevated lead readings -- was based on Flint being a poor city, Ananich said he didn't know, but it feels like it.

"I can tell you how that it feels. 'These are poor folks. Well, we'll get to it when we get to it,'" he said. "The outrage needs to come from everybody. The citizens are outraged and I think they need to be more so."

On the logistics of switching Flint back to DWSD water, Ananich said it's "absolutely possible." From talking to Detroit officials, Ananich was told it could be done on either the "short-term" or "long-term" basis.

Genesee County still gets its water from DWSD so it would be a matter of buying more of it. However, Ananich couldn't speak in detail about how a switch would work, but stressed this is why an emergency coordinator needs to be activated as if the city had been hit by a tornado.

Every day that goes by without the water getting switched it another day children in Flint will be exposed to more lead in their water, leading to future health issues, he said.

"The lack of urgency that I've received from many departments of state government is alarming and unfortunate. It's not something I'm going to put up with," he said.

"The quicker the city and state moves toward making this happen, the quicker we can have a secure safe drinking water source again. The longer people delay, it's compounding the problem."

Sara:
Just making sure you received this.
And wondering, given all, whether someone from the state -- the gov or someone -- could talk to me about what's happened on this.
I want to be sure to get the state's view in here. And I feel like the city is pointing to the state as responsible since the emergency manager was in charge when the choice was made to go to the river.
You have time for a call? 312 543 4883.

Sara:

I'm doing a piece for tomorrow's paper about the Flint lead situation.

A few questions for you:
1) I listened to the governor's briefing last week and I believe he said this: "We all have a concern about Flint's drinking water in terms of what we're seeing on lead."
Others have quoted it differently, this way: "We all have a concern about Flint's drinking water in terms IN what we're seeing on lead."
Can you help me know which is accurate?

2) Any new developments from the state in terms of a return to Detroit or some other plan?

3)
Do these sentences seem factually accurate to you:
State officials last week called for the testing of drinking water at all Flint public schools and expedited efforts to replace lead service lines, and promised $1 million to provide filters for residents.

Also separately: And blood tests released by a local pediatrician – and corroborated last week by state officials analyzing their own testing – showed an increase in elevated levels of lead in children in some Flint neighborhoods since 2014 when the city began drawing water from the river.

4) The city said the decision to go to Flint River water was made under the state appointed emergency manager. Does the governor want to comment on the EM's role in this? And does he want to comment on the possibility of state funds for a return to Detroit water?

Thanks
Monica

Subject: Flint water committee

Hello. This is Mark Hicks, a reporter at The Detroit News. I am trying to reach representatives for Gov. Snyder's office tonight regarding a recommendation from a committee of experts on Wednesday to reconnect Flint to Detroit's water system to improve the drinking water quality. Has the governor's office received this recommendation, and does it impact the announcement tomorrow regarding Flint's water system?

Please feel free to let me know if you or another representative can reach me before 8:30 p.m. EST tonight for a brief phone interview or statement regarding this recommendation. I realize this is late and short notice after-hours, and some information might not be immediately accessible, but any help provided will be greatly appreciated and better inform our readers. Thank you for your time.

Hi there Mark –

Happy to help. What I'd say is that this is an option we're helping thoroughly review and consider with the city, and the technical advisory committee's work is much appreciated in this matter. We're also focused on working hard in collaboration with all and implementing the key action steps outlined on Oct. 2 to help protect public health and ensure safe, accessible drinking water for Flint residents.

As you noted, we have slated a time tomorrow morning for the Governor and administration with city and community leaders to provide an update on Flint water so hoping you got those details. Stay tuned.

Thanks and best,
SW

WWJ's Zahra Huber spoke with Professor Marc Edwards from Virginia Tech regarding his thoughts on the Flint Water situation as the lead researcher on the project and he had very harsh words about how the Flint Water situation had been handled. He said federal laws had been broken when the switch was made away from the Detroit River to the Flint River and that data was manipulated to show that Flint water was safe when it was not. Can we get a comment from the Governor on this interview? I've attached the audio, uncut, for you to listen to for comment.

Let us know. Thanks!

Greetings, Rona --

Just got back from Flint. Various versions of this Q came up during today's presser. I would recommend you take a listen. http://www.michigan.gov/snyder/0,4668,7-277-60112-268720--,00.html

State was following all nationally set standards and protocols for testing, and has some of the most dedicated and professional drinking water and public health experts in the country working off the best information available at the time. We have acted quickly and took detailed concrete actions steps as new information and data came in.

To: Eggert, David
Subject: Flint Water

Hi Dave,

Jennifer passed your note along to me so I wanted to get back to clarify for you. The supplemental request will include $6 million for reconnection to Detroit, and then almost another $3.5 million for filters, testing, and additional agency support…so the total supplemental request will be for $9.35 million. The confusion is coming from the fact that we already announced $1 million in money from filters last week and that money does not require a supplemental appropriation. The actual total commitment from the state is $10.6 million…but some of the money won't require a supplemental appropriation. Call me if you have questions. Thanks!

Jennifer,

I thought I heard Snyder mention spending $4M separately from the $6M to switch back. News release says $3.5M. Can you clarify? Thx.

MDP Statement: Those Responsible for Flint Water Crisis Must Be Held Accountable

LANSING – The Michigan Democratic Party issued the following statement today, on behalf of Party Chair Brandon Dillon, demanding those responsible for the Flint water crisis be held accountable and calling on Governor Snyder to immediately fire former Flint EM, and current EM for Detroit Public Schools, Darnell Earley:

"Accountability in government means answering to the people you serve, not just cleaning up your mistakes using their money," said Brandon Dillon, Chair of the Michigan Democratic Party.

"This catastrophe began with the governor's appointed emergency manager, and as much as Governor Snyder would like to pretend, this is not a matter of negotiating at the boardroom table. This is a situation where you pay for your mistakes and put those responsible on the chopping block.

"That is why we are calling for the immediate firing of the governor's handpicked emergency manager for Flint, Darnell Earley. Earley was in charge when the decision was made to switch the city to unsafe drinking water. If poisoning

children wasn't bad enough, after Earley failed the citizens of Flint, the governor inexplicably rewarded him with another appointment – emergency manager for Detroit Public Schools – where he is now responsible for the education of nearly 50,000 students.

"The children of Flint and Detroit are being robbed of what most of us take for granted – safe drinking water and a quality education. The wholesale theft of our children's futures must end now. That begins with the removal from power all those that would sacrifice the future of a single child in Michigan – let alone thousands – in order to add a few extra dollars to the bottom line."

*Gov. Rick Snyder announces Flint Water Task Force to review state, federal and municipal actions, offer recommendations [http://www.michigan.gov/snyder/0,4668,7-277-57577_57657-367761--,00.html] *

"Experts in public health, water management, environmental protection to focus on steps to protect residents"

LANSING, Mich. – Gov. Rick Snyder today announced the creation of an independent advisory task force charged with reviewing actions regarding water use and testing in Flint and offer recommendations for future guidelines to protect the health and safety of all state residents.

Task force members include experts in public health and medicine, water management, and environmental protection from both sides of the aisle, and will be co-chaired by Ken Sikkema of Public Sector Consultants and Chris Kolb, of the Michigan Environmental Council. Also serving will be Dr. Matthew Davis of the University of Michigan Health System, Eric Rothstein, of the Galardi Rothstein Group and Dr. Lawrence Reynolds of Mott Children's Health Center in Flint.

"Transitioning back to the Detroit Water and Sewerage Department-Great Lakes Water Authority is a good first step to protecting public health in Flint, but it's not the last step," Snyder said. "Bringing in outside experts to evaluate our actions and help monitor and advise on potential changes to law, procedures and practices will be key to continuing work on the comprehensive action plan and ensuring safe drinking water for all the residents in Flint and all of Michigan."

Snyder said the administration will fully cooperate with task force members, saying he wants an unbiased report focusing on steps taken in the past and recommendations that could improve practices to ensure all residents have access to safe, clean water.

Ken Sikkema is a senior policy fellow at Public Sector Consultants, where he specializes in public finance, environment, and energy policy.
Prior to joining the firm, Sikkema served in both the Michigan House and Senate, culminating with four years as Senate majority leader. He has also served as both an adjunct and visiting professor at Grand Valley State University.

Chris Kolb is president of the Michigan Environmental Council, a statewide coalition of 70 environmental, public health and faith-based nonprofit groups. Before joining the MEC, Kolb represented Ann Arbor in the state House for six years and served six years on the Ann Arbor City Council. He has been president of the MEC for six years.

Matthew Davis, M.D., M.A.P.P., is professor of pediatrics and internal medicine at the University of Michigan Health System and professor of public policy at the Gerald R. Ford School at the University of Michigan, having joined the faculty in 2000. Davis also is a professor of health management and policy at the School of Public Health. He previously served as the chief medical executive of the Michigan Department of Community Health/Department of Health and Human Services.

Eric Rothstein is a national water issues consultant and principal at the Galardi Rothstein Group. He served as an independent advisor on the creation of the Great Lakes Water Authority. Rothstein also has served as Jefferson County, Alabama's rate consultant and municipal adviser for litigation related to the county's bankruptcy and issuance of $1.7 billion in sewer warrants and led strategic financial planning30 years of experience in water, wastewater and stormwater utility finance and rate-making assessments.

Lawrence Reynolds, M.D., is a pediatrician in Flint who serves as president of the Mott Children's Health Center. He received his medical degree from Howard University College of Medicine and has been in practice for 36 years. He has served as president of the Genesee County Medical Society and the Michigan Chapter of the American Academy of

Pediatrics. He has been honored for his humanitarian and advocacy efforts on behalf of children from the Community Foundation of Greater Flint.

Snyder has said reconnecting with the authority is a critical step to resolving water quality issues and addressing related health concerns.
It will not immediately resolve the city's problem with lead service lines or aging infrastructure. It will take time for pipes in Flint to become coated with the phosphate corrosion control.

To best protect public health, state and local authorities will continue to carry out steps outlined on Oct. 2 in a comprehensive action plan, including continued testing, the use of faucet filters and providing residents with accurate information about steps to eliminate lead exposure. The Michigan Departments of Environmental Quality and Health and Human Services are continuing to provide free water filters, free lead testing through the state laboratory for Flint water customers, and hiring additional staff to conduct health exposure monitoring for lead in drinking water.

Subject: state money for detroit water

Sara:
I was at a City Council meeting last night when Flint City Administrator Natasha Henderson said the state has only wired Flint $2 million of the $6 million approved by the state Legislature.
She said the city has been told it will receive an additional $2 million in January and another $2 million in April.
Henderson said she's asked that the money be sent immediately because the city was required to pay Detroit the entire $12 million upfront, before the water was reconnected, and its water and sewer fund balance has dropped significantly as a result.
Several council members also spoke about this, and Council President Josh Freeman called the payment plant "beyond ridiculous" given the city's financial position.
Is there someone who can talk to us about this?

Subject: RE: state money for detroit water

Ok, Ron, here's our update and response.

Our understanding of the original plan and agreement to re-connect with GLWA-DWSD called for monthly payments from the city. Unbeknownst to the state, the city entered into an arrangement with GLWA-DWSD for one upfront sum and payment.

We want to help ensure that there are absolutely no complications or interruptions in Flint residents receiving water from GWLA-DWSD, so we are taking steps to immediately wire the remaining money to the city now that we are aware of, and have confirmed, this final arrangement. They should have all of the state funds within a business day or two.

Thanks for checking in and flagging this.

Best,
SW

Sent: Wednesday, October 28, 2015 9:59 AM
To: Murray, David (GOV)
Cc: Wurfel, Sara (GOV)
Subject: Flint Water Inquiry

There are several groups who are demanding the Governor issue a State of Emerfency related to the water & infrastructure situation in Flint. They claim it would open up the door for federal assistance.

My questions are...

DOES the governor have the power/authority to declare a State of Emergency for issues like what's happening in Flint?

IF such a declaration was made- does it open the doors to federal assistance for example... to replace old lead service lines... and/or other infrastructure?

Has the governor considered/discussed asking for additional monetary help from the federal government for infrastructure repairs/replacements in Flint?

Lastly, the governor has called for a third party review of the decision making that went into Flint's water source switch-problems that followed. What's the latest on that effort? Will the legislature have a role- Sen. Ananich says Legislature should have a role.

Thank you

Damon Maloney

Hi Jim,

Here's a link to the release about the task force, which was announced Oct. 21.

http://www.michigan.gov/snyder/0,4668,7-277-57577_57657-367761--,00.html

Co-chairs Ken Sikkema and Chris Kolb have agreed to serve as spokesmen, and seem to be very accessible, based on the coverage I've seen so far. Members are:

Ken Sikkema is a senior policy fellow at Public Sector Consultants, where he specializes in public finance, environment, and energy policy. Prior to joining the firm, Sikkema served in both the Michigan House and Senate, culminating with four years as Senate majority leader. He has also served as both an adjunct and visiting professor at Grand Valley State University.

Chris Kolb is president of the Michigan Environmental Council, a statewide coalition of 70 environmental, public health and faith-based nonprofit groups. Before joining the MEC, Kolb represented Ann Arbor in the state House for six years and served six years on the Ann Arbor City Council. He has been president of the MEC for six years.

Matthew Davis, M.D., M.A.P.P., is professor of pediatrics and internal medicine at the University of Michigan Health System and professor of public policy at the Gerald R. Ford School at the University of Michigan, having joined the faculty in 2000. Davis also is a professor of health management and policy at the School of Public Health. He previously served as the chief medical executive of the Michigan Department of Community Health/Department of Health and Human Services.

Eric Rothstein is a national water issues consultant and principal at the Galardi Rothstein Group. He served as an independent advisor on the creation of the Great Lakes Water Authority. Rothstein also has served as Jefferson County, Alabama's rate consultant and municipal adviser for litigation related to the county's bankruptcy and issuance of $1.7 billion in sewer warrants and led strategic financial planning for the City of Atlanta's Department of Watershed Management. He has more than 30 years of experience in water, wastewater and stormwater utility finance and rate-making assessments.

Lawrence Reynolds, M.D., is a pediatrician in Flint who serves as president of the Mott Children's Health Center. He received his medical degree from Howard University College of Medicine and has been in practice for 36 years. He has served as president of the Genesee County Medical Society and the Michigan Chapter of the American Academy of Pediatrics. He has been honored for his humanitarian and advocacy efforts on behalf of children from the Community Foundation of Greater Flint.

A full one-on-one will be tough this week, but the governor has a number of public events with scrums and I can make sure you get a question in there.

Dave

Residents of Flint, Michigan, to Sue City, State over Lead in Drinking Water

Natural Resources Defense Council, ACLU of Michigan Start Legal Process to Stop Ongoing Violations of the Safe Drinking Water Act

CHICAGO (November 16, 2015) – Residents of Flint, Mich., together with the ACLU of Michigan and the Natural Resources Defense Council, today announced their intention to sue state and city officials for ongoing violations of the federal Safe Drinking Water Act amid the city's widespread lead-contamination crisis. A lawsuit would force officials to address repeated, systemic failures to follow federal rules designed to protect the public health from dangerous levels of lead exposure.

"The community of Flint is strong and united in our commitment to repair the harm lead exposure has inflicted on our children and families. We are taking a stand so that our community can heal the damage that has been done and work together so that justice can prevail," said Pastor Allen Overton, a leader of the Concerned Pastors for Social Action.

"This action is about holding the government accountable for failing to protect the public health of an entire community," said Anjali Waikar, an environmental justice staff attorney at the Natural Resources Defense Council. "This case also highlights a troubling trend in which the government is willing to cut costs at the expense of its most vulnerable citizens," Waikar said.

"In their short-sighted effort to save a buck, the leaders who were supposed to be protecting Flint's citizens instead left them exposed to dangerously high levels of lead contamination," said Michael Steinberg, legal director for the ACLU of Michigan. "Not only were the city and state's actions dangerous and misguided. They were illegal, too."

Dangerous amounts of lead leached out of the city's pipes and into the drinking water of Flint's homes and schools for more than a year following a decision by Flint officials to eschew Detroit's water supply in favor of using the Flint River as the City's primary drinking water source. Not long after the switch, residents began to complain about the smell and discoloration of the water and, later, physical ailments stemming from the tainted water.

Officials working on behalf of Flint insisted for several months that the water was safe. However, water tests conducted by experts from Virginia Tech proved those assurances to be wrong, and a study by a local pediatrician that showed that the

proportion of Flint kids with elevated blood lead levels had doubled since the City switched water sources. After officials could no longer deny that the community's drinking water was contaminated, Michigan Gov. Rick Snyder finally conceded that Flint should stop using the river water and return to the Detroit water system.

Despite this move, though, city and state officials have continued to violate federal legal requirements for monitoring and sampling tap water for lead, notifying the public about water-testing results and maintaining corrosion control from Flint's lead pipes.

"So much irreparable harm has been done as a direct result of the failures and lack of oversight perpetrated by the City of Flint and Michigan officials who are the very people we relied on to keep us safe. This lawsuit gives me hope that this will stop and no other city will have to endure the physical, property, and emotional damage that Flint residents have," said Melissa Mays of Water You Fighting For, a Flint-based organization.

There is no safe level of lead exposure. The toxic effects of lead on virtually every system in the body, and particularly on the developing brains of young children, are well documented. It can also contribute to high blood pressure and other health problems in adults. Even low levels of lead in the blood have been shown to affect IQ, ability to pay attention, and academic achievement, effects that are irreversible.

The Notice of Intent to Sue was served on behalf of Concerned Pastors for Social Action, an association of religious leaders from Flint; Melissa Mays, a Flint resident; the ACLU of Michigan; and the Natural Resources Defense Council. The groups assert that since April 2014, the City of Flint and Michigan state officials have failed to monitor and control for lead in Flint's drinking water and maintain a program to assist Michigan schools with lead testing and remediation, in violation of the federal Safe Drinking Water Act. If City of Flint and Michigan state officials – including Governor Rick Snyder and Dan Wyant, Director of Michigan Department of Environmental Quality - do not remedy violations under the Safe Drinking Water Act within sixty days, the groups intend to file a lawsuit in federal court.

Flint and state officials have known since 2011 that choosing the Flint River as a drinking water source could result in lead contamination issues, due to its highly corrosive properties. Yet state and city officials insisted that the water was safe to drink - even after testing found dangerously high lead levels in some residents' tap water. Citizen concerns about high lead levels were dismissed by state and city officials as "near hysteri[cal]" and "irresponsible," despite well-established evidence that there is no safe level of lead exposure, and that even low levels of lead in the blood have been shown to affect IQ, ability to pay attention, and academic achievement, effects that are irreversible.

The Notice of Intent to Sue is required under the Safe Drinking Water Act as a prerequisite to filing suit.

###

For nearly 100 years, the ACLU has been our nation's guardian of liberty, working in courts, legislatures, and communities to defend and preserve the individual rights and liberties that the Constitution and the laws of the United States guarantee everyone in this country. The ACLU of Michigan was officially established in 1959 as part of that mission.

The Natural Resources Defense Council (NRDC) is an international nonprofit environmental organization with more than 2 million members and online activists. Since 1970, our lawyers, scientists, and other environmental specialists have worked to protect the world's natural resources, public health, and the environment. NRDC has offices in New York City, Washington, D.C., Los Angeles, San Francisco, Chicago, Bozeman, MT, and Beijing. Visit us atwww.nrdc.org and follow us on Twitter @NRDC.

Subject: seeking comment on lawsuits concerning Flint water

Dave:
I'm covering a news conference at 11 a.m. concerning a federal lawsuit filed by Melissa Mays and others concerning Flint water.
The lawsuit names city and state officials, including the governor.
Here is a link to that lawsuit.
We are seeking your comment.
http://pittlawpc.com/wp-content/uploads/2015/11/Mays-vs.-Snyder-et-al.-Complaint-and-Jury-Demand-Final-1.pdf

I've also attached an intent to sue notice from the ACLU and NDRC, which is also concerning Flint water and which also names governor and other state officials.
Seeking your comment on that as well.
Thanks,

Ron Fonger

Hi there Ron –

Sure – can do now.

We haven't been served yet so can't comment on specific details. What would say is that we're focused on moving forward and ensuring public health and clean, safe drinking water. The governor has outlined a detailed multiple step action plan for both immediate, mid and long term. He has also appointed a task force doing a very important job of reviewing all past actions. They are a bipartisan group of people of the highest integrity, experts in their fields and widely respected who are going to do a very thorough, objective review.

Just let me know if anything more needed at all.

Thanks and best,
SW

Residents of Flint, Michigan, to Sue City, State over Lead in Drinking Water

Natural Resources Defense Council, ACLU of Michigan Start Legal Process to Stop Ongoing Violations of the Safe Drinking Water Act

CHICAGO (November 16, 2015) – Residents of Flint, Mich., together with the ACLU of Michigan and the Natural Resources Defense Council, today announced their intention to sue state and city officials for ongoing violations of the federal Safe Drinking Water Act amid the city's widespread lead-contamination crisis. A lawsuit would force officials to address repeated, systemic failures to follow federal rules designed to protect the public health from dangerous levels of lead exposure.

"The community of Flint is strong and united in our commitment to repair the harm lead exposure has inflicted on our children and families. We are taking a stand so that our community can heal the damage that has been done and work together so that justice can prevail," said Pastor Allen Overton, a leader of the Concerned Pastors for Social Action.

"This action is about holding the government accountable for failing to protect the public health of an entire community," said Anjali Waikar, an environmental justice staff attorney at the Natural Resources Defense Council. "This case also highlights a troubling trend in which the government is willing to cut costs at the expense of its most vulnerable citizens," Waikar said.

"In their short-sighted effort to save a buck, the leaders who were supposed to be protecting Flint's citizens instead left them exposed to dangerously high levels of lead contamination," said Michael Steinberg, legal director for the ACLU of Michigan. "Not only were the city and state's actions dangerous and misguided. They were illegal, too."

Dangerous amounts of lead leached out of the city's pipes and into the drinking water of Flint's homes and schools for more than a year following a decision by Flint officials to eschew Detroit's water supply in favor of using the Flint River as the City's primary drinking water source. Not long after the switch, residents began to complain about the smell and discoloration of the water and, later, physical ailments stemming from the tainted water.

Officials working on behalf of Flint insisted for several months that the water was safe. However, water tests conducted by experts from Virginia Tech proved those assurances to be wrong, and a study by a local pediatrician that showed that the proportion of Flint kids with elevated blood lead levels had doubled since the City switched water sources. After officials could no longer deny that the community's drinking water was contaminated, Michigan Gov. Rick Snyder finally conceded that Flint should stop using the river water and return to the Detroit water system.

Despite this move, though, city and state officials have continued to violate federal legal requirements for monitoring and sampling tap water for lead, notifying the public about water-testing results and maintaining corrosion control from Flint's lead pipes.

"So much irreparable harm has been done as a direct result of the failures and lack of oversight perpetrated by the City of Flint and Michigan officials who are the very people we relied on to keep us safe. This lawsuit gives me hope that this will stop and no other city will have to endure the physical, property, and emotional damage that Flint residents have," said Melissa Mays of Water You Fighting For, a Flint-based organization.

There is no safe level of lead exposure. The toxic effects of lead on virtually every system in the body, and particularly on the developing brains of young children, are well documented. It can also contribute to high blood pressure and other health problems in adults. Even low levels of lead in the blood have been shown to affect IQ, ability to pay attention, and academic achievement, effects that are irreversible.

The Notice of Intent to Sue was served on behalf of Concerned Pastors for Social Action, an association of religious leaders from Flint; Melissa Mays, a Flint resident; the ACLU of Michigan; and the Natural Resources Defense Council. The groups assert that since April 2014, the City of Flint and Michigan state officials have failed to monitor and control for lead in Flint's drinking water and maintain a program to assist Michigan schools with lead testing and remediation, in violation of the federal Safe Drinking Water Act. If City of Flint and Michigan state officials – including Governor Rick Snyder and Dan Wyant, Director of Michigan Department of Environmental Quality - do not remedy violations under the Safe Drinking Water Act within sixty days, the groups intend to file a lawsuit in federal court.

Flint and state officials have known since 2011 that choosing the Flint River as a drinking water source could result in lead contamination issues, due to its highly corrosive properties. Yet state and city officials insisted that the water was safe to drink - even after testing found dangerously high lead levels in some residents' tap water. Citizen concerns about high lead levels were dismissed by state and city officials as "near hysteri[cal]" and "irresponsible," despite well-established evidence that there is no safe level of lead exposure, and that even low levels of lead in the blood have been shown to affect IQ, ability to pay attention, and academic achievement, effects that are irreversible.

The Notice of Intent to Sue is required under the Safe Drinking Water Act as a prerequisite to filing suit.

November 13, 2015

Governor Rick Snyder
Executive Office of the Governor
P.O. Box 30013
Lansing, Michigan 48909

Governor Snyder:

I would like to provide you an update with some of the work we are doing in response to your letter on October 2, 2015 letter. I also have three requests of the state that are necessary to provide relief to the victims of the Flint water crisis.

First, Senator Stabenow, Senator Peters and I wrote a letter to the U.S. Environmental Protection Agency (EPA) asking for clarification on whether federal law permits states to use Safe Drinking Water State Revolving Funds (Revolving Funds) to finance the replacement of privately owned lead water service lines (attached). The EPA responded that the Revolving Funds can in fact be used for this purpose. My office immediately notified both your office and the Michigan Department of Environmental Quality of this fact.

Secondly, the three of us also wrote to Secretary Tom Vilsack requesting that the U.S. Department of Agriculture (USDA) provide greater clarification on the availability of "Ready to Feed" formula for recipients of Special Supplemental Nutrition Program for Women, Infants and Children (WIC) in Flint. Additionally, the letter asks to identify resources to improve the nutrition of Flint residents specifically as it relates to lead, because a certain diet can reduce some of the impact of exposure. The USDA is currently reviewing the letter.

Third, I have been working with the EPA on important revisions to the Lead and Copper Rule that would prevent a public health crisis like the one in Flint from happening again in other communities. I will be providing testimony at a meeting of the National Drinking Water Advisory Council next Wednesday, November 18 on what we have learned firsthand in Flint and the necessary improvements to the Lead and Copper Rule.

I will continue to pursue all of these avenues in order to find assistance for the people of Flint. There are, however, additional steps that need to be taken to remediate the damage done to the people of Flint due to the failures at the state government level, alongside the forgiveness of Flint's Revolving Funds loan debt if that becomes available. I urge state and local partners to work in coordination to fulfill the following requests.

- First, I request that the state of Michigan use its Revolving Funds and other state resources such as the rainy day and general funds to repair the damage done to Flint's water distribution system.

Due to the corrosive nature of the water, conservative estimates show there has been hundreds of millions of dollars of damage done to Flint's water distribution system. The damage to the system will increase maintenance costs resulting in higher rates for Flint water users, who already are burdened by the highest water rates in the state. Furthermore, the presence of over 15,000 lead service lines continues to threaten the quality of the water and creates the potential for future lead exposure through drinking water. As stated previously, the EPA has said that using the Revolving Funds for this purpose is allowed under federal law, and I request the state do so.

- Second, I request the state create a fund for ongoing assistance to the people of Flint to respond to the impacts of lead exposure.

The effects of lead are serious and permanent, with especially harmful impacts on young children and those with weakened immune systems. In discussions with health professionals, they have expressed the need for significant investments in the local health system in order to respond to the widespread exposure of lead to the people of Flint, including monitoring of future lead exposure. This fund should include support for, at a minimum, continuous health monitoring, early education programs, nutrition education, support services for children to succeed in school, and continued exposure prevention efforts. The investments we make now to combat the negative impacts of lead exposure will pay dividends in avoided costs in the future.

- Finally, I again ask that the state immediately reverse course and rescind Flint's obligation to provide $2 million for the cost of connecting to the Detroit water system and refund any money the city of Flint has had to pay.

Requiring a financially distressed city and its people to pay for the state's failures is an abdication of clear responsibility by the state. The state-appointed emergency manager was in charge of the city of Flint during the time that the decision to leave the Detroit system was made. The state – not Flint – created this water crisis, and the state needs to pay to fix it. The $2 million Flint spent to reconnect to the Detroit water system could be used for many other essential services in Flint, such as hiring policemen and firefighters, improving schools and maintaining parks.

In addition to state investments, I encourage the state to request assistance from federal agencies. They have extensive experience working with health, education and nutrition systems nationwide and could provide critical resources to state officials. Specifically, the Centers for Disease Control and Prevention has offered resources if the state requests it. I will work to support any efforts for federal assistance the state makes.

I look forward to working with the state and federal governments to not only provide clean drinking water to the people of Flint immediately, but also repair the damage done to the city's water system and give local health professionals the resources they need to combat the long term impacts of lead exposure.

Sincerely,

Dan Kildee
MEMBER OF CONGRESS

Subject: Questions

Sarah, there are only two questions for tomorrow's interview:

Question 1: Please tell us about the DPS legislation that is being proposed and how it will help better educate the Detroit Students.

Question 2: How are you going to fix Flint's water system problems and how will you keep a situation like this from happening again.
Please note, I am not going after the "why" of Flint. I just want to hear the solution.

> # Freeman Elementary water testing shows lead exposure limited to fixtures
> *Experts release water testing results on schools and homes in Flint*
>
> As part of Gov. Rick Snyder's action plan for Flint drinking water, the DEQ today released water testing data from nearly 400 homes and businesses in Flint as well as comprehensive sampling results from Freeman Elementary School.
>
> Both sets of data indicate the problems with lead are localized to individual buildings or even individual faucets, rather than system-wide issues.
>
> "The results from this data underline the need for water testing at all homes, businesses, schools and other buildings in Flint," said George Krisztian, the DEQ's Flint Action Plan Coordinator. "Problems with lead exposure appear to be localized to individual service lines or plumbing fixtures, and we want to see all families in Flint take advantage of free water testing from the state."

Freeman Elementary testing results
At Freeman Elementary, 31 faucets were tested using a series of four samples each. Twenty-two outlets did not show elevated lead exposure, but nine faucets came back with initially high results.

Those nine outlets involve brass components, indicating the problem involves the fixtures or plumbing immediately surrounding the fixture. When the faucets and fountains were operated for several minutes, lead levels fell significantly, in some cases to non-detectable levels.

Additional testing designed to look deep into the school's plumbing did not suggest larger, systemic issues.

Freeman Elementary has several options for remedying the issues at these nine faucets and fountains. The school can elect not to use those particular fountains, or implement a formalized flushing regimen. The sampling results indicate that for all but one tap, a 3- to 4-minute flushing period each morning would drastically reduce lead exposure.

For a permanent solution, the school should opt to replace the faucets and fountains of concern.

"The safety and health of our students are our primary concern at Flint Community Schools, so we will start work as soon as possible to replace faucets, aerators and other related components where high lead levels were detected," FCS Superintendent Bilal Tawwab said. "Once those fixes have been made, the DEQ has offered to provide additional testing of the water at Freeman Elementary to ensure the water from every sample is safe for our students. Flint Community Schools appreciates the efforts by the DEQ, working with all stakeholders to make sure our water continues to be tested and that our students have access to safe, clean drinking water."

For Freeman Elementary's complete sampling results and more information about how sampling was conducted, visit www.michigan.gov/flintwater.

The DEQ and the DLARA also have conducted sampling at other Flint schools, and results will soon be available on the DEQ's website. Additionally, the state will test every other school in the Flint Community Schools district, as well as any school or daycare in the city. Interested schools and daycare centers should contact George Krisztian at krisztiang@michigan.gov.

Homeowner and other customer-requested testing results
Results from the 381 samples from homes, businesses, schools and other facilities that took advantage of free water testing through the state showed similar, localized results. More than 75 percent of the samples analyzed demonstrated lead results of 5 parts per billion or less, and more than 91 percent demonstrated lead results of 15 parts per billion or less.

This data suggests that while some homes experience elevated lead level results due to lead service lines or in-home plumbing, many other homes experience little to no lead. This can make it difficult for homeowners and businesses to predict their lead exposure.

"Since it's not easy to predict if an individual home's water is at risk for lead, the best thing all residents can do is get their water tested," Krisztian said. "It's a free test that provides valuable information for families."

Testing is available for free by contacting the Flint Water Plant at 810-787-6537 and pressing 1, or by emailing flintwater@cityofflint.com.

For more information about water samples received through the state's free testing program, visit www.michigan.gov/flintwater.

How school sampling was conducted
To conduct this comprehensive sampling, the DEQ and Michigan Department of Licensing and Regulatory Affairs began on Oct. 23 with a thorough plumbing assessment of the school to gain a comprehensive understanding of how water moves through the building and what types of plumbing materials are used. The assessment also identified 31 faucets or fountains in the school that provide water for drinking, cooking and/or food preparation.

On Oct. 24, the DEQ and DLARA took four, 125-milliliter samples from each of the 31 identified faucets and fountains. The first two samples were taken immediately after turning on the faucet, followed by a 30-second flush and then the third sample, followed by a 2-minute flush and then the fourth sample. These samples provided information on the impact of any lead sources in or around each specific faucet and fountain as well as its connecting plumbing.

On Oct. 31, the DEQ and DLARA took an additional 30 samples, 10 each from three sites in the school. These 1-liter samples were taken consecutively, and provided information about the impact of any lead sources deep in the building's plumbing.

Gov. Rick Snyder: Comprehensive action plan will help Flint residents address water concerns

Collaborative effort with state, federal and city leaders focuses on testing, assistance

FLINT, Mich. – Flint residents need to have access to safe, clean, water now and long into the future, Gov. Rick Snyder said, announcing a comprehensive action plan created with state, federal and city leaders to address concerns about drinking water.

The water leaving Flint's drinking water system is safe to drink, but some families with lead plumbing in their homes or connections might experience higher levels of lead in the water that comes out of their faucets.

The action plan focuses on increasing water testing, offering additional precautions for families with lead plumbing in their homes, and providing long-term solutions to address the city's water infrastructure challenges. The plan was created at Snyder's direction by the Michigan Department of Environmental Quality, and the Department of Health and Human Services, the U.S. Environmental Protection Agency, and the City of Flint.

"People are worried about their health and their families, and they need to have accurate information and know that help is available," Snyder said. "Today's action plan builds upon ongoing work with state and federal agencies and our partnership with city and community leaders. Together, we are working to ensure that all Flint residents can feel safe and address potential problems."

The city and the state also are working together to gather more data to ensure the water that leaves the treatment plant as well as the water that arrives in Flint homes is safe for all residents. The plan includes:

- Testing in Flint public schools immediately to ensure that drinking water is safe, with testing also available at no cost to any other school in Flint.
- Expanding health exposure testing of individual homes.
- Offering free water testing to Flint residents to assure their drinking water is safe.
- Accelerating an optimization of corrosion controls in the Flint drinking water system.
- Expanding a Safe Drinking Water Technical Advisory Committee to ensure the best technology, practices and science are being followed by adding an expert from the Environmental Protection Agency's Office of Research and Development to the group.
- Accelerating water system improvements to address replacing lead service lines.
- Naming Dr. Eden Wells, chief medical executive for the Michigan Department of Health and Human Services, as the Flint drinking water public health adviser.
- Providing water filters to residents with concerns or who are included in state assistance programs.
- Creating a comprehensive lead education program to make sure residents have detailed information about how to protect themselves and their homes.
- Expediting the completion of the Karegnondi Water Authority pipeline.

Residents can have their water tested by calling 810-787-6537 and pressing 1, or emailing flintwater@cityofflint.com. Additional information is available at www.michigan.gov/flintwater.

State leaders have been working closely with state and federal lawmakers to tap resources at all levels of government to address concerns.

State health experts said there has been an increase in elevated childhood blood lead levels in some specific communities. Initial analysis of MDHHS data found that blood lead levels of children in Flint have followed an expected seasonal trend. While this analysis for Flint as a whole remains true, a comprehensive and detailed review breaking down data by ZIP codes with the city revealed that MDHHS data is consistent with a study presented recently by Hurley Children's Hospital.

"While we cannot conclusively say that the water source change is the sole cause of the increase, this analysis supports our efforts as we take active steps to reduce all potential lead exposures in Flint," MDHHS Director Nick Lyon said. "As part of this, we are working closely with our public and private partners to provide Flint residents on MDHHS assistance programs with water filters and educate families about the steps they can take to reduce all lead exposures in their home."

As a part of the action plan, MDHHS is making National Sanitation Foundation certified water filters available to clients who are active Family Independence Program, Food Assistance Program, Child Development and Care or Social Security Insurance recipients.

"This action plan offers concrete steps we will take in a local, state and federal partnership to ensure all Flint residents have safe water to drink," DEQ Director Dan Wyant said. "The DEQ will work closely with the city to gather further data to ensure the water that leaves Flint's system as well as the water that arrives in Flint homes is safe to drink."

>
> **Safety & Quality**
>
> - 100% Safety is the standard
> - City of Flint releases testing data to assure safety and expands testing to households with support from the Michigan Department of Environmental Quality
> - Support alternatives for those advised not to drink the water by their doctors through the Michigan Health Endowment Fund and community partners to protect the vulnerable like seniors and infants
> - Bring on experienced river water treatment operational management in the City of Flint
> - Require water testing data to be released quarterly by law in all Michigan communities
>
> **Access**
>
> - Announce an amnesty program for turn-ons and reduce the turn-on cost in Flint
> - Develop a revised payment plan policy to allow customers to come back on to the Flint system

- New Federal and State partnership to establish new Drinking Water Emergency Assistance Fund for customers (modeled on Federal and State energy utility programs: Low Income Home Energy Assistance Program; Michigan Energy Assistance Program; State Emergency Relief)

Investment

- Accelerate water system improvements outlined in the City of Flint Capital Improvement Plan through Federal and State Investments
- State approves City of Flint's Distressed Cities Fund applications
- Federal and State forgiveness of payment to Drinking Water Revolving Loan Fund
- Federal and State financing for future improvements
- City Water Department implements budgeted FY15 projects including leak detection, valve repairs, new pipes and meter replacements

Education

- Develop a community partnership to provide household and business customers with information on testing and conservation
- Ongoing partnership with Michigan Department of Human Services, United Way, Salvation Army and community organizations to provide information on water assistance
- Expand youth energy initiative to assist households with conservation and efficiency (piloted in summer 2014 with Northwestern High School students, EcoWorks and Consumers Energy)

The struggle with our water has gone on for too long. The state must take action and do its part.

Please ask Gov. Snyder to take action immediately to implement my plan and ensure Flint's water is safe.

Thank you for your ongoing support.

Sincerely,

Dayne

> > That's why I just sent Gov. Snyder my Flint Water Improvement Plan. It focuses on the areas of safety, quality, access, investment and education. My letter urges the governor to quickly implement these ideas so that Flint's water is 100% safe.

Please contact Gov. Snyder by calling (517) 335-6397 (or by clicking here) and ask him to take action immediately to implement my plan and ensure Flint's water is safe.

My plan offers new ideas and also builds on successful models of utility, energy and assistance programs at the state and federal levels. Here is my plan:

Safety & Quality

- 100% Safety is the standard
- City of Flint releases testing data to assure safety and expands testing to households with support from the Michigan Department of Environmental Quality
- Support alternatives for those advised not to drink the water by their doctors through the Michigan Health Endowment Fund and community partners to protect the vulnerable like seniors and infants
- Bring on experienced river water treatment operational management in the City of Flint
- Require water testing data to be released quarterly by law in all Michigan communities

Access

- Announce an amnesty program for turn-ons and reduce the turn-on cost in Flint
- Develop a revised payment plan policy to allow customers to come back on to the Flint system
- New Federal and State partnership to establish new Drinking Water Emergency Assistance Fund for customers (modeled on Federal and State energy utility programs: Low Income Home Energy Assistance Program; Michigan Energy Assistance Program; State Emergency Relief)

Investment

- Accelerate water system improvements outlined in the City of Flint Capital Improvement Plan through Federal and State Investments
- State approves City of Flint's Distressed Cities Fund applications
- Federal and State forgiveness of payment to Drinking Water Revolving Loan Fund
- Federal and State financing for future improvements
- City Water Department implements budgeted FY15 projects including leak detection, valve repairs, new pipes and meter replacements

Education

- Develop a community partnership to provide household and business customers with information on testing and conservation
- Ongoing partnership with Michigan Department of Human Services, United Way, Salvation Army and community organizations to provide information on water assistance
- Expand youth energy initiative to assist households with conservation and efficiency (piloted in summer 2014 with Northwestern High School students, EcoWorks and Consumers Energy)

The struggle with our water has gone on for too long. The state must take action and do its part.

Please ask Gov. Snyder to take action immediately to implement my plan and ensure Flint's water is safe.

Thank you for your ongoing support.

Sincerely,

Dayne

P.S. -- Please send this to friends and family so they can take action too!

Dave:
I'm attaching an op-ed that Flint Mayor Dayne Walling has given MLive-The Flint Journal. I'm writing a story about his request that the governor visit Flint.
I did hear back from Terry Stanton the last time we asked for a response to the mayor's water improvement plan and I used his comments, however Walling has told me since that he's expecting a response from the governor himself and I'll probably be using that in the story I'm working on also.

By Flint Mayor Dayne Walling

Access to safe and clean water is a basic human right. And a citizen's right to safe drinking water should not be based on how much money you earn, the neighborhood you live in or if your local government is under the control of an emergency manager.

All citizens have a fundamental right to know that such a critical resource as their water supply is safe and accessible. But that is not happening in Flint at the moment.

That is why, on January 18th, I forwarded a request that Governor Snyder adopt my Flint Water Improvement Plan. My plan, focused on the areas of safety, quality, access, investment and education, starts by calling for 100 percent safety as the standard for water.

The plan calls for reporting of water testing to the public by city officials, an amnesty program to reduce fees for Flint water turn-ons, accelerated water system capital improvements and partnerships with community organizations to help with water payment assistance. I'm also reaching out to other state and elected officials for support.

The request comes as residents, as evidenced in a series of recent community meetings, continue to have concerns about the quality of Flint's water. Earlier in 2014, several boil-the-water advisories were issued by the city because of issues with bacteria found in water in some parts of Flint. Gov. Snyder's appointed emergency manager recently told customers that Flint was in violation of the Safe Drinking Water Act because of the high level of trihalomethane (TTHM) -- a byproduct of chlorination -- in drinking water samples last year.

A contradictory order from the city saying the water was safe but could present risks for infants, the elderly and those with compromised immune systems confused residents further and compounded the worries of Flint's vulnerable populations. Marry that with costly water rates that have threatened individuals' access and you have the crisis of concern and confidence swirling in Flint today.

Sadly, because Flint is under Michigan's controversial emergency manager system of governance, locally elected officials have been largely limited to serving as sounding boards to justifiably worried Flint residents.

This is unacceptable. Not only should Governor Snyder visit Flint in the midst of this ongoing crisis, but his administration should make it the priority that the community expects.

It's time for the Snyder administration to do what is best for the citizens of Flint---immediately. There is nothing more important in Flint right now than fixing the water problems.

This will take time and money so the sooner the new investments are made, the better.

Subject: Rep Neeley's Release

Sara –

Just wanted to give you a heads up that Rep Neeley sent a letter to the Gov and asked that I send out the following press release re the water situation in Flint.

FOR IMMEDIATE RELEASE
Friday, Jan. 30, 2015

Contact: Rep. Sheldon Neeley
Phone: (517) 373-8808

Neeley Sends Letter to Governor Concerning Flint Water Crisis

Legislator asks Gov. Snyder to consider plans to fix water system

LANSING – State Representative **Sheldon Neeley** (D-Flint) has sent a letter to Gov. Rick Snyder, as well as his chief of staff, Dennis Muchmore, and his senior advisor, Dick Posthumus, to inform them of the current crisis affecting the city of Flint's water supply. Residents have spoken out about the quality of the water, calling it unsafe to drink. Photos taken by residents and Flint media have shown the water to be brownish in color, with sediment and other foreign bodies floating in it.

"In light of the rising and continuous concerns in the Flint community, it is imperative that the governor explores all options in his power to come to the aid of the community," Neeley said.

In the letter, Rep. Neeley asks for an executive decision by the governor to forgive Flint's water fund loan balance of nearly $20.8 million so that those funds may be used to help the city rebuild the infrastructure as well as provide a cost-effective water delivery system.

With this loan forgiveness, Rep. Neeley explains the city will be able to upgrade wastewater treatment processes, improve safe drinking water upgrades and maintain a water system that provides better water to the citizens of Flint.

"The people of Flint elected me to serve them first, and when I see my constituents on the verge of civil unrest, I must act swiftly and with passion," Neeley said. "I am hopeful this letter will bring the concerns of Flint to Gov. Snyder, and that will in turn open a dialogue about what can be done to help the community I love so much."

3. **Flint Water:** had a meeting yesterday with a company Baird put in the room to discuss their ozone technology. It was a good conversation but a non-starter for several reasons (Flint already has an Ozone system to modify its water, this company hasn't had its system certified for use on public drinking water supplies, and the problem they propose to address is not at the water plant but throughout various sections of the distribution system). More broadly, Harvey is looking for a 'thing' the state can be doing for Flint that will position SOM / RS positively. Suggestions range from handing out home water filters (think Britta faucet mount) to passing out jugs of water. After consulting with our experts in the Drinking water program, what we've really come to at DEQ is that if there's funding from treasury (or some charitable donor foundation), the best short-term use of dollars would probably be to hire a company to 'pig' the lines in the distribution system. This is a routine maintenance activity in municipal systems that involves an in-line device under pressure that clears funk out of the lines. **The good news on Flint**: Flint EM Jerry Ambrose noted yesterday that the city has some work to do on its system in the weeks ahead; the TTHM issue is quickly going away; the 'brown water' folks are loud but really few in number; the consultants are doing their work to make suggestions to help the city prioritize its needs; and, broadly, nobody seems to be targeting the administration recently.

Emergency Manager Statement on Water: Spending Extra $12 Million on Detroit Water "Incomprehensible" When Flint Water Just as Safe

Flint, Michigan – March 24, 2015 – At the City Council meeting held on Monday, March 23, 2015, Flint City Council made a motion to "do all things necessary" to return to using water purchased from Detroit and discontinue use of the Flint River as a water source. The following statement from Emergency Manager Gerald Ambrose addresses that point:

"Flint water today is safe by all EPA and MDEQ standards and the City is working daily to improve its quality. Users also pay some of the highest rates in the state because of the decreased numbers of users and the age of the system.

"It is incomprehensible to me that 7 members of the Flint City Council would want to send more than $12 million a year to the system serving southeast Michigan, even if Flint rate payers could afford it. Water from Detroit is no safer than water from Flint.

"If $12 million annually were available for discretionary use, it would be far better spent reducing rates paid by Flint customers and/or modernizing the City's system."

CITY OF FLINT

OFFICE OF THE EMERGENCY MANAGER

Gerald Ambrose
Emergency Manager

TO: Wayne Workman, Deputy Treasurer
Treasury Department
State of Michigan

FROM: Jerry Ambrose, Emergency Manager
City of Flint

DATE: March 3, 2015

As the Emergency Manager for the City of Flint, I am charged with restoring the City government to financial solvency, and working to assure that the City moves forward on a financially sustainable basis. The steps taken over the past three years have been difficult. Taxes and fees have been raised, services and workforce reduced, and ongoing costs, including legacy costs, have been constrained.

The current controversy surrounding the provision of water, and the path for resolution, has a potentially significant impact on the progress that is being made. I am satisfied that the water provided to Flint users today is within all MDEQ and EPA guidelines, as evidenced by the most recent water quality results conducted for MDEQ. We have a continuing commitment to maintain water safety and to improve water quality, and have dedicated resources to assure this commitment will be made.

The oft-repeated suggestion that the City should return to DWSD, even for a short period of time, would, in my judgment, have extremely negative financial consequences to the water system, and consequently to the rate payers. By the most conservative estimates, such a move would increase costs by at least $12 million annually, with that amount achieved only by eliminating virtually all budgeted improvements in the system. For a system with Unrestricted Assets of only $740,745, according to the June 30, 2014 audited financial statements, the only recourse within the City's control would be to increase revenues significantly. And in my judgment, that would come from raising rates for water by 30% or more . Further, changing the *source* of the city's water would not necessarily change any of the *aesthetics* of the water, including odor and discoloration, since those appear to be directly related to the aging pipes and other infrastructure that carry water from the treatment facility to our customers.

This direction of discussion also deviates from what, in my judgment, should be the focus: How can we not only operate and maintain a system to assure the delivery of safe and quality water dependably, but significantly reduce the cost of water and sewer to the users? At an average of $149 per month for water and sewer service for a residential user, the cost is extremely high in comparison to surrounding areas, as well as most areas across the state, and creates a significant financial burden for many users. In my judgment, we should all be concentrating on how to reduce rates by 50% or more. Unfortunately, there are no easy or evident answers, and continuation of the status will be an impediment to the sustainable recovery of the City of Flint. It is a conversation that I expect we will have with the recently created Water Quality Advisory Committee.

My reasoning for this conclusion is as follows:

One of the decisions made in the context of beginning to eliminate deficits and to restore financial stability to the City of Flint was to increase water and sewer rates significantly – the only choice available to financially stabilize a system that as of June 30, 2012, had a deficit of $8,758,091. Another was to leave DWDS for the KWA because it offered the opportunity to lower future rate increases. A third decision was to utilize the Flint River on an interim basis when DWSD unilaterally terminated the City's contract for water purchase. That decision was made because it also offered an immediate cost savings opportunity which translated into the ability to upgrade the Water Treatment Plant without having to seek financing. It was a reasonable decision because of our experience in using the river in a back-up capacity, including test runs on a quarterly basis for several decades.

Unfortunately, the switch to the river as a primary source was more challenging than anticipated, and the harsh winter of 2013-2014 resulted in much more damage to the aging water infrastructure than in previous years. The result was the issuance of required notices that water exceeded established guidelines for safety as it could affect certain vulnerable populations, and some users of the system experienced unpleasant odors and discoloration. Some users also appeared to have had some negative reactions to the new source of water. However, as soon as the test results were known, City staff took immediate actions to address the concerns. These actions are evidenced today by the fact that MDEQ has certified that our most recent testing shows water from all testing sites to be well within acceptable guidelines. Additionally, the City is continuing to taking the necessary actions to assure that the water supply remains safe and that water quality continues to improve.

As the City has moved to address the situation, the suggestion continues to be made that the City should re-engage with DWSD and purchase water at least until the KWA pipeline is supplying water. As evidenced by the most recent letter from DWSD, such a decision would immediately increase the City's cost by $846,700 per month, or $10,160,400 per year, just for the fixed cost portion of the price. The actual *purchase* of water would be an additional fee, and dependent upon

the quantity purchased. We estimate the actual water purchase cost to average more than $1 million per month, for a grand total of approximately $22 million per year. Finally, the DWSD offer is conditioned upon the City (or presumably the KWA) agreeing to negotiate a long term contract (30 years) for back-up.

The $22 million annual estimate of increased costs to purchase water from DWSD would be minimally offset by an approximate $3 million in reduced operating costs, and could be further offset by an additional $9 million, but only if all funding for capital improvements to the system are eliminated. To eliminate all funding dedicated to repairing, stabilizing, and improving the system would be totally irresponsible and would have long term negative consequences to the City and to future rate payers.

As you are aware we have recently brought in outside expert assistance to evaluate the steps we have taken to assure that the water is safe and to continue to improve water quality. We are expecting specific recommendations within the next few weeks, and are committed to implementing those recommendations in a timely manner. Many steps have already been taken. I am confident that implementing their recommendations will assure a continuing supply of safe water as well as improved quality, and at far less cost than re-engaging DWSD.

We have also created a 40-member Water Advisory Committee and a 13-member Technical Advisory Committee to assure two-way communication with the public and users of the system. Those committees will begin to meet this week, and we look forward to answering their questions and receiving their input.

It is unfortunate that problems and concerns with quality have arisen, and we are working every day to address the issues that caused them. Maintaining safe water and improving quality is a top priority as we work to make the City of Flint an attractive place to live, work, study, and play.

Subject: PRESS RELEASE: Flint Water Improvements

For Immediate Release

City of Flint Announces Action Plan to Maintain Safety and Improve Quality of Flint Water

Flint, Michigan – April 8, 2015 – The City of Flint is proceeding with a series of actions to ensure the continued safety of Flint drinking water is maintained and that issues of discoloration and odor continue to be addressed. Most notably, the installation of a Granulated Active Charcoal filter (GAC) at the Water Treatment Plant is expected to be authorized this week by Emergency Manager Jerry Ambrose.

The introduction of the GAC to the treatment process at Flint's plant will absorb or reduce the chemical precursors which will block or eliminate the formation of TTHM during the filtration process. Engineering and design are underway and installation of the GAC is targeted for completion by mid-July. Cost of this improvement is projected at $1.5 million and will be paid for by the proceeds from the state approved restructuring of the City's Drinking Water Revolving Fund loans.

In addition to the installation of the GAC, the City of Flint is undertaking a number of other improvements to the water system in the coming months, including a water leak detection monitoring, completion of the hydraulic model and subsequent targeted hydrant flushing program, and the replacement of two miles of water main pipe in a critical area of the city. All of these improvements scheduled to occur within the next six months.

"The replacement of this two mile section of pipe along Dupont Street has been identified by a water reliability

study as a significant piece of infrastructure and will greatly improve the movement of water in that area of the city," said Dept. of Public Works Director Howard Croft. Increasing the circulation of the water in the system will immediately result in improvements in water aesthetics, such as discoloration and odor. The MDEQ has given its approval to the project and the process of bidding for construction will begin next week. Construction will take place during the summer of this year.

Ongoing repairs and maintenance also continue to improve the health of the system. To date, about 200 water main breaks have been repaired this year. Whenever major work that may disrupt service is scheduled, the City works to notify residents in the affected area with signage and with posts to cityofflint.com. Updates will include the area of work and the estimated time of completion.

Each main break repair stirs sediments in the line. "Residents should know that there is a chance of discoloration or odor any time work is being done on a main in their area," said Croft. "This is nothing to be alarmed about and it doesn't mean the water is unsafe." If discoloration of water or odor occurs due to repairs, residents are reminded that running the water for a few minutes should clear the line. Anyone with water questions should call 810-787-6537.

The City of Flint remains committed to addressing water related issues. Along with maintaining the safety of the water, addressing quality and affordability are top priorities. The steps outlined above are indicators of the City's progress in addressing the most pressing concerns surrounding water. Emergency Manager Ambrose reiterated that development of a contract with DWSD was not going to happen.

"Those advocating for a return to DWSD do not want to recognize the financial realities of such a move. Not only would such a move increase the City's costs by more than $1million per month, but the water from Detroit is no safer than Flint water, as both entities are measured by the same MDEQ standards that have been in place for years. Why anyone would want to send a million dollars a month to DWSD rather than make necessary repairs to the City's own system is beyond me."

Further updates on the progress being made to improve Flint's water system will released in regular updates to the media and in updates to the City's website, cityofflint.com. Anyone wishing to report an issue can do so under "Online Services". Anyone with questions about these or any other water issues should call the water treatment plant at 810-787-6537.

Subject: Reporter seeking a response to Virgnia Tech's Flint Water Study findings
Importance: High

Dear Mr. Wurfel,

After testing more than 250 homes in Flint, researchers at Virginia Tech have continued to find dangerously high levels of lead in many of the homes being sampled.

They are unequivocal in their findings, stating that: "Flint has a very serious lead in water problem."

These results run contrary to the city and MDEQ's assertions that the city of Flint is in compliance with U.S. EPA Lead and Copper Rule compliance standards. In fact, based on Virginia Tech's results – which are much more extensive, having tested nearly four times as many homes as the city tested during the first half of 2015, and the VT researchers have not specifically target high-risk homes, as the city is required to do for the LCR monitoring – the city is actually well out of compliance.

I was hoping you would be able to provide the MDEQ's position regarding VT researchers' purported findings, and the contradictory conclusions..

Virginia Tech's methodology and results have been posted on a web site dedicated to the project (flintwaterstudy.org/), so it is clear from their end how they have approached this project, and exactly what they've done, and what they've found.

It would be very helpful to have the MDEQ's views on all this for my upcoming story.

I am working on a deadline and would very much appreciate a response by the end of the day tomorrow, Sept. 11.

I appreciate any help you can provide in my reporting on this very important public health issue.

Sincerely,

Curt

The Honorable Phil Phelps
State Representative
State Capitol
P.O. Box 30014
Lansing, Michigan 48909-7514

Dear Senator Ananich and Representatives Neeley and Phelps:

Thank you for your letter of September 10, 2015, regarding water quality in the city of Flint (City). Your interest in this matter is appreciated. The Michigan Department of Environmental Quality (MDEQ) takes seriously its responsibility to ensure safe drinking water for all Michigan residents. The MDEQ maintains a robust public water supply regulatory program through long-standing partnerships with the United States Environmental Protection Agency (USEPA) and the state's regulated public water systems.

With respect to the draft memo referenced in your letter, the MDEQ does not review or receive draft memos from the USEPA, nor would we expect to while it is a draft.

Regulations associated with lead, copper, and corrosion control require communities to monitor water quality at customer taps. The monitoring protocols for sampling home water attempt to represent actual home water use, and they allow the MDEQ to get consistent results for year-over-year comparisons.

It is important to recognize that any home with lead plumbing or service connections will impart some amount of lead to water samples. While the compliance monitoring for lead in the City has not exceeded the federally-established Action Level, either before or after the City switched sources and treatment methods, there has always been

detectable lead in the City's water sampling program for homes that have lead plumbing or service connections. The City's monitoring program's purpose is to show aggregated levels throughout the entire system, not individual home levels.

The law requires the City to provide individual lead results to customers whose homes are sampled for compliance with the Action Level. Each customer with an individual sample result that exceeds 15 parts per billion is provided information on actions they can take to limit lead exposure in their drinking water. System-wide results from the most recent lead compliance monitoring are included each year in the City's annual Consumer Confidence Report, which is provided to customers and available online.

It is important to note that the City performed extensive home water tests for lead and copper last year and this year, and is meeting state and federal drinking water standards. Local health departments also administer annual blood level testing on children in Flint; results show no discernable rise in levels that might be expected if there was an elevated lead level in the City water supply. The City currently has no unresolved violations of state and federal drinking water standards.

The MDEQ continues to work with the City and federal regulators on the shared goal of ensuring safe, reliable drinking water in this community.

I look forward to discussing this issue in greater detail at the meeting next week. If you should have additional questions before then, please contact Ms. Maggie Pallone, Deputy Director, Policy and Legislative Affairs, at 517-284-6715 or pallonem@michigan.gov; or you may contact me.

Sincerely,

Dan Wyant
Director
517-284-6700

To: Kaffer, Nancy
Subject: Re: Flint water

Just so you know ... that's not accurate history, Nancy. This change was pushed and direct request of Genesee Co Board of Commissioners AND city council (7-1) and mayor at the time. We had severe reservations about switch but ultimately was nearly unanimous request from local local level that Treasury signed off on. (And FYI double checking, but nearly certain EM at time was not Darnell E.)

Not that any of that matters, Nancy.
The bottom line is that we have been working hard to do everything possible to play a supportive role and work in collaborative fashion across all levels of government with community, faith & business leaders, residents, etc.

Protecting public health is paramount and safe, clean, accessible drinking water is essential. That's what we solely focused on helping ensure.

Highly recommend you reach out to state Health & Human Services team for how this data set was spliced and diced. That's key to understanding. They can walk through for you and Freep team.

Thanks much,
SW

Ed Kurtz was the EM at the time. Important to remember that the emergency manager had the final say - with ultimate sign off by Treasury-on making the change, but also did so at the strong urging of Flint city leaders. This was not a decision that was forced upon the city. Exact opposite actually.

Emergency managers often try to work closely with mayors and city councils, getting recommendations from the local communities they are serving. The decision to make the switch during the construction of the Karegnondi pipeline came after an 8-1 vote by the City Council and strong endorsement by the mayor and Genesee County leaders. The move also came after a series of upgrades to Flint's water treatment plant, testing and an independent analysis of water rates and quality.

Subject: Letter to Governor Snyder: Flint Water

Hi Dennis,

Senator Ananich began drafting the attached letter on Sunday and thought it would be helpful to guide our 12pm call.

Thanks,

Andy

SENATE MINORITY LEADER
JIM ANANICH

517.373.0142
senjananich@senate.michigan.gov
senatedems.com/ananich

September 28, 2015

State of Michigan
Executive Office of the Governor
P.O. Box 30013
Lansing, MI 48909

Governor Snyder,

Access to safe, affordable drinking water is a basic necessity for every community. It is completely unacceptable that respected scientific experts and our trusted local physicians have verified that the City of Flint's drinking water is dangerous for our citizens, especially our most vulnerable young people.

As a result, I am formally requesting assistance as suggested by the experts on the frontline of this public health crisis. Here are the top priorities we should work together to address:

1. **Swift transfer to a safe source of water until the Karegnondi Water Authority (KWA) project is complete next year.** Your administration has the ability to ensure a financially acceptable and responsible contract between Flint and the Detroit Water and Sewerage Department, particularly in light of the public health implications with the Flint River supply.

2. **Equally urgent is the need for corrosion control as recommended by independent scientific experts.** There are chemical treatment additives that could help reduce this corrosion. I urge you to help the city implement anti-corrosion methods immediately. The current emergency makes the January timeline unacceptable.

3. **Filters and bottled water assistance.** Flint water touches the entire city. Whether it's a person's home, work, school, restaurant or place of worship, access to safe, clean drinking water should not be hindered. Water filters, used in conjunction with corrosion control methods, are necessary to help guard against toxic exposure.

   I have been working with the philanthropic community and private sector to secure donations to acquire filters and water; however, more funds will be necessary to effectively cover the thousands of residents impacted. I would like to formally request emergency funding to help supplement the acquisition of water filters and bottled water. Any and all appropriate state or federal money to help accomplish this feat should be considered.

SENATE MINORITY LEADER
JIM ANANICH

517.373.0142
senjananich@senate.michigan.gov
senatedems.com/ananich

4. **Support for completion of the KWA pipeline.** It is presumed that the upcoming KWA pipeline will solve a number of problems associated with the current sourcing of Flint's water from the Flint River. I am requesting a meeting between representatives from your office, KWA board members and project engineers to discuss any options to expedite the pipeline's construction.

5. **A long-term commitment to addressing outdated infrastructure.** A recent EPA report just outlined the billions of dollars necessary over the next several decades to adequately secure safe water for our entire state. You have the position and opportunity to be a national leader on moving the debate forward on this topic so that we can avoid the type of catastrophe my community is grappling with today.

I look forward to working with you to deliver on these concrete and urgent action items to alleviate the public health crisis facing our residents.

We jeopardize any progress and comeback for our cities and state if we cannot ensure safe, basic necessities for our families or if we cannot come together swiftly to fix an identified, severe threat to the safety of our people.

Sincerely,

Jim Ananich
Senate Democratic Leader
District 27

Subject: RE: Flint Water

Hi there Ryan –

Gov. Snyder spoke with Sen. Ananich this morning about how the state can continue working with Flint city leaders. We believe protecting public health is paramount and safe, clean, accessible drinking water is essential . That's what we are focused on helping ensure and deeply share the Senator's commitment to helping address the issue. We just received the letter from the senator and are reviewing his ideas.

The governor and state agencies have been closely working with Flint leaders on their infrastructure challenges for months, including providing $4.2 million in grants and restructured loan financing to provide resources needed to locate and fix infrastructure problems and add the carbon filtration system, additional testing and helping identify and provide filters.

It's also important that people have accurate information about their health and water. The MI Depts of Environmental Quality and Health and Human Services are testing water and working with local agencies and Flint residents on issues related to what they can do if they have concerns about the pipes in their homes.

Thanks and hope this helps.

Hi Sara,

Working up a quick story on Sen. Ananich's request that the state step in to help Flint with its water problem. Any statement from the governor on his request?

Thanks,

Ryan

Subject: RE: FOR IMMEDIATE RELEASE: Senate Minority Leader Jim Ananich Urges Governor, State Action in Flint

HI there Chad –

Saw that you called, but am trapped on a conf call at the moment.

On this issue and your Qs would say:

Gov. Snyder spoke with Sen. Ananich this morning about how the state can continue working with Flint city leaders. We believe protecting public health is paramount and safe, clean, accessible drinking water is essential . That's what we are focused on helping ensure and deeply share the Senator's commitment to helping address the issue. We are reviewing his ideas.

The governor and state agencies have been closely working with Flint leaders on their infrastructure challenges for months, including providing $4.2 million in grants and restructured loan financing to provide resources needed to locate and fix infrastructure problems and add the carbon filtration system, additional testing and helping identify and provide filters.

We understand that residents are frustrated, and also want to make sure they have accurate information and know where they can go if they have questions about their health and the water connections in their home. The health and safety of Flint residents is always the first priority, and that includes ensuring there is clean, safe drinking water -- especially for children. The MI Depts of Environmental Quality and Health and Human Services are testing water and working with local agencies and Flint residents on issues related to what they can do if they have concerns about the pipes in their homes.

{On background: You probably recall the issues and challenges re: the history with DWSD. It's also important to note that switching back to Detroit water will not necessarily have the effect that some expect. Flint has long-term challenges with its water infrastructure that need to be addressed.}

Thanks and hope this helps.

Subject: FW: FOR IMMEDIATE RELEASE: Senate Minority Leader Jim Ananich Urges Governor, State Action in Flint

Sara,
Got a deadline question here about Senator Ananich's letter to the governor. Does he support having the city switch back to Detroit water until the Karegnondi pipeline is complete? Is there a plan being put together by the administration to deal with these elevated levels of lead in Flint children found by researchers at Hurley Medical Center? Can your characterize the governor's conversation with Senator Ananich today? Did he make any kind of commitment to take action?

Senate Minority Leader Jim Ananich Urges Governor, State Action in Flint

FLINT, Mich.—Senate Minority Leader Jim Ananich (D-Flint) issued the following statement:

"My constituents and I believe the state must act urgently to provide concrete solutions to the public health crisis in the City of Flint. In speaking with Governor Snyder and his key aides today, I stressed the need to work together on a number of initiatives that will ensure safe water for Flint residents.

"My formal request included immediate and long-term solutions, including strong consideration for switching back to the Detroit water source until the Karegnondi Pipeline Authority project is complete. Anything less than an aggressive, comprehensive approach is simply unacceptable."

A copy of Senator Ananich's letter to Governor Snyder can be viewed here.

Subject: Flint Water Issue - Rep. Kildee Letter Received By Federal Agencies
Importance: High

Attached are two documents for your information: 1) A letter from US Representative Kildee to Craig Fugate of FEMA, HHS, EPA, and CDC and 2) a PowerPoint on Flint water concerns. Essentially, Representative Kildee is requesting FEMA take action to resolve potable water quality issues associated with the Flint water system.

This is the first we heard of the letter and I actually found out from the FEMA Region V Director when he called me about an hour ago. He and I discussed a few things on this and he will respond advising they need to work through the local EM system in MI (engaging the local EM and then EMHSD). They also are working through the local health department as I confirmed with Dr. Scott from DHHS. If Flint needs water or want water the first step is to handle it locally (at least on the EM side and then push up any gaps they cannot fill to us). We are not aware of any work the local EM has done in this regard. I will be with the FEMA Region V Director as well as the FEMA Administrator, Craig Fugate, this week if they have questions.

I have advised Dr. Jackie Scott from DHHS and will be sending her the letter and ppt.

Secretary Burwell, Administrator McCarthy, Administrator Fugate and Director Frieden:

Recent developments regarding the level of lead in the water in one of the communities I represent, Flint, Mich., have raised significant concerns about the safety of its drinking water. For this reason, I am requesting immediate resources to provide safe drinking water to the residents of Flint until additional testing can be completed that confirms the water is safe, particularly for young children.

Although the city of Flint and the Michigan Department of Environmental Quality have conducted tests and taken the position that the lead level in the water is safe and below the action level, there are significant questions about the efficacy of their testing. In fact, Dr. Marc Edwards of Virginia Tech University, an established drinking water expert, conducted his own tests as part of a study that determined the water in Flint was above the lead action level.

Additionally, yesterday the Greater Flint Health Coalition, a group of health professionals in the community, released a report showing elevated blood lead levels in residents in Flint, particularly in young children. In response, the Coalition has requested that the Genesee County Health Department release a health advisory indicating that the water in Flint is unsafe to drink.

Thus, I am requesting resources from your agency to provide clean drinking water to the residents of Flint until additional testing can determine when the water will be safe to drink and a long-term solution can be implemented.

This is a serious health issue, particularly for young children, and until the water is demonstrated to be safe, immediate action must be taken to ensure Flint's residents have potable drinking water.

I look forward to working with you and thank you for your immediate attention.

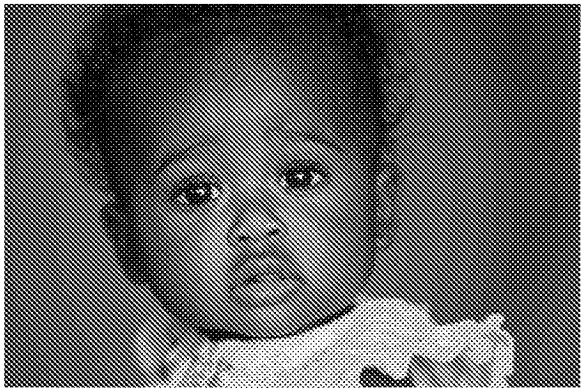
Sincerely,

Dan Kildee
MEMBER OF CONGRESS

Pediatric Lead Exposure In Flint, Michigan:
A Failure of Primary Prevention

Mona Hanna-Attisha MD MPH FAAP
Hurley Children's Hospital
Michigan State University Department of Pediatrics and Human Development

Introducing Makayla*



- 12 month old girl (DOB 8/15/2014) presented last week for her 1 year old check up. No concerns.
- Lives with single mom and 2 older siblings in west side (48504). Formula from WIC; powder mixed with warm tap water.
- Physical exam and development are normal. Makayla receives her 1 year old vaccines and routine lead and hemoglobin screening.
- *A couple days later, lead level comes back as 6 ug/dL.*

*Hypothetical scenario

Blood lead level of 6 ug/dL….

- Blood lead levels (BLL) above 5 ug/dL are considered elevated blood lead levels (EBL)
- Just a few years ago (2012), 10 ug/dL was cutoff
- Increasing evidence shows NO safe blood lead level
- Disproportionately impacts low income, minority children
- Primary prevention is most important

Primary Prevention

- "Because no measurable level of blood lead is known to be without deleterious effects, and because once engendered, the effects appear to be irreversible in the absence of any other interventions, public health, environmental and housing policies should encourage PREVENTION of all exposure to lead."

"Low Level Lead Exposure Harms Children: A Renewed Call for Primary Prevention." 2012 CDC Advisory Committee on Childhood Lead Poisoning Prevention.

What will happen to Makayla?

- Vast evidence supports increased likelihood of:
  - Decrease in IQ
    - An increase in BLL from 1 to 4 ug/dL, drops mean IQ -3.7 points
  - Small change in mean IQ, shifts entire population IQ distribution
    - Reduces high achievers IQs (>130) and increases kids with low IQs (<70)
    - Implications for special education services, employment, incarceration, life achievement, etc

Lanphear BP et al., Low-level environmental lead exposure and children's intellectual function: an international pooled analysis. Environ Health Perspect, 2005. 113:894-9.
Fewtrell LJ, Pruss-Ustun A, Landrigan P, and Ayuso-Mateos JL, Estimating the global burden of disease of mild mental retardation and cardiovascular diseases from environmental lead exposure. Environmental Research, 2004. 94:120-33.

Behavioral Burden

- Increased likelihood of :
  - ADHD behaviors
  - Delinquent behaviors and arrests
  - Total arrests and increased rates of arrests involving violent offenses
  - Other health effects: hematologic, cardiovascular, immunologic, endocrine, etc

Wright, JP, KN Dietrich, MD Ris, et al. 2008. Association of prenatal and childhood blood lead concentrations with criminal arrests in early adulthood. *PLoS Med* 5(5): e101

Chen, A, B Cai, KN Dietrich, et al. 2007. Lead exposure, IQ, and behavior in urban 5-7 year-olds: Does lead affect behavior only by lowering IQ? *Pediatrics* 119(3): e650-e658.

Needleman, HL, C McFarland, RB Ness, et al. 2002. Bone lead levels in adjudicated delinquents: A case control study. *Neurotoxicology and Teratology* 24(6):711-717.

The Cost

- "For childhood lead poisoning, $5.9 million in medical care costs, as well as an additional $50.9 billion (sensitivity analysis: $44.8–$60.6 billion) in lost economic productivity resulting from reduced cognitive potential from preventable childhood lead exposure."

- "The present value of Michigan's economic losses attributable to lead exposure in the 2009 cohort of 5 year-olds ranges from $3.19 (using U.S. blood lead levels) to $4.85 billion (using Michigan blood lead levels) per year in loss of future lifetime earnings."

Leonardo Trasande and Yinghua Liu. Reducing The Staggering Costs Of Environmental Disease In Children, Estimated At $76.6 Billion In 2008. *Health Affairs*, 30, no.5 (2011):863-870

The Price of Pollution: Cost Estimates of Environment-Related Childhood Diseases in Michigan. 2010 Report by Michigan Network of Children's Environmental Health

Lead in Water

- Increasing as source of lead, because of success in controlling other sources.
- Increasing due to aging water infrastructures, change in water sources, disinfectant uses, etc
- Disproportionally impacts developmentally-vulnerable formula-fed infants and pregnant mothers
  - For about 25% of infants drinking formula made from tap water at 10 ppb, blood lead would rise above the CDC level of concern of 5 micrograms/deciLiter (or ug/dL).
  - Increase in fetal death and reduced birth weights

Triantafyllidou, S., Gallagher. D. and Edwards, M. Assessing risk with increasingly stringent public health goals: the case of water lead and blood lead in children. Journal of Water and Health. doi: 10.2166/wh.2013.067 58-68 (2014).
Edwards, M. Fetal Death and Reduced Birth Rates Associated with Exposure to Lead-Contaminated Drinking Water. Env. Sci. and Tech. 2013 DOI: 10.1021/es4034952

Preliminary Results

(results removed)

Conclusions from BLL analysis

- % of children with EBL in Flint has increased
  - Most striking increase in zip codes with highest water lead levels
- Results underestimate risk: infants not screened for lead and water usage unknown.
  - *Accurate exposure largely unknown since national childhood lead screening focuses on household lead exposure (paint, soil, dust) at later ages (1 and 2 yrs)*

- Results are consistent and concerning. Primary prevention has failed.

Next Steps

- Immediately limit further exposure
  - Encourage breast feeding
  - No tap water for high risk groups: infants on formula & pregnant mothers
  - Declare health advisory: allows WIC to administer water or ready-to-feed formula and other resources (Salvation Army & United Way water supplies)
  - Distribution of lead clearing NSF-approved filters
  - Public education regarding precautions (flushing, etc)
  - Re-connect to Lake Huron water source ASAP

And Makayla…

- Asymptomatic now
- But what will her future hold and an entire generation of Flint children?

We should slate some time to talk at length tomorrow, Nancy. I will be more than happy to walk through the history of what's been done already and what's in the works.

This is absolutely an issue the administration has been actively engaged on and will continue to do so -- challenging issue on so many fronts but one we're committed to helping address -- let there be no Q on that front.

I have some time in mid to late morning -- hopefully between 10:15 and 11:15 though I know someone was trying to get something on my calendar then, again over lunch hour, or late afternoon after 4:15 p.m. Please let me know if one of those may work for you.

While on subject, am hoping a response from DEQ Director Dan Wyant and DHHS Director Nick Lyon on this topic may be in order that Free Press will run.

Thanks much,
SW

Hi Sara,

Wanted to touch base again before leaving for the day. I'm writing on this again this week, and really would like to know a) if you guys now believe there is an issue with lead in the water, or are engaging in further testing/analysis to determine if lead is an issue, and b) what exactly you guys are doing to help get safe drinking water to Flint kids.

Best,

Nancy

Dave,
I'm following up on an MLive report about the governor playing a role in helping get 1,500 water filters to pastors in Flint through an anonymous donor. What can you tell me about this and the governor's involvement?

Subject: PRESS INQUIRY | The Guardian re: Flint

Hi all,

I wanted to see if the governor's office would have any response to the call from Senate minority leader Jim Ananich to have Flint reconnect with Detroit's water system. It's for a story I'm working on for the Guardian, regarding the increase in lead levels in the blood of Flint children ever since the city switched to using the Flint River.

Additionally, can you confirm whether or not the governor's office backed plans from Flint's emergency manager to transfer from using DWSD to the Flint River?

I'm working on a 5 pm deadline for tomorrow (9/30). I appreciate your time and look forward to the response.

Best,

Ryan Felton

Thanks for note and reaching out, Brian.

The announcement is actually Friday early afternoon (final details in process of still being worked out, though additional water filters are certainly one planned piece) - would there be any interest in combining? or what's sense of timing and plan on your end? Will absolutely also keep confidential.

May be best to chat too.

Just let me know.

Thanks so much,
SW

Sara,
We understand the Governor is going to make an announcement today about Flint water. Can you tell me anything? We are in the process of making a large donation to the community in support of water filters. We do not want to get cross with anyone. I will keep information confidential.

It's all related to help address the city's water issues and aging infrastructure -- I'm trying to track someone down to get you the full details ASAP. But as I recall the "incinerator" as you noted, was directly tied to *water system enhancements* through improved waste management.

There was another major initiative related to a restructuring of Flint's Drinking Water Revolving Fund loans in March 2015 that allowed the city to save and dedicate $2.24 million to infrastructure needs and capital improvements in water. At least $1.5M was used to help improve the city's water treatment plant and help ensure the continued safety of Flint drinking water and address issues of discoloration and odor. This included the installation of a Granulated Active Charcoal filter (GAC) to help block or eliminate the formation of TTHM during the filtration process.

Hello Sara,

My name is Damon Maloney with ABC12 News in Flint.
I'm writing to inquire about a meeting being held tomorrow morning in Lansing between the Governor's Office and the group 'Concerned Pastors for Social Action' from Flint.

We're hearing the meeting centers around Flint's water quality concerns and is scheduled for sometime around 9 o'clock.

From my understanding this meeting won't be open to the public, but I'm wondering if we can at least have a location of where it's taking place? We'll be looking for reaction after the meeting from locals.

Thank you,
Damon Maloney PPI

Leaders address ‘crisis of confidence’ with Flint water

Residents of Flint have been hearing concerning news about the municipal water supply for more than a year. Since the City switched water supplies and began using the Flint River as its source, some have complained that the water is different. State regulators have cited the system for various compliance issues.

More recently, voices within the community – and some from other states – have alleged state regulators failed to do their jobs. It simply is not the case. Leaders from the regulatory community today announced an 11-point plan to build our knowledge about lead in flint, better protect the community and restore public confidence in the regulatory framework.

Over the past year, the city has completed lead and copper testing required by law. Lead is a real concern, particularly in children. State and federal regulators run programs to monitor lead in drinking water and in kids’ blood levels specifically to track lead impacts on our communities.

It is important to remember lead comes from many sources, particularly in the state’s urban and industrial areas. It is in soils, deposited for decades by leaded fuel and industrial processes. It is paint, in homes built in the mid-1970s or earlier. And it is common in the plumbing and service connections of older homes, which is why the DEQ requires community water sources around the state to track and record it and take steps when levels surpass federal action thresholds.

Flint’s drinking water passed its lead and copper test. However, testing done by non-regulatory entities produced a different picture, creating confusion and concern – for residents of flint as well as city, state and federal regulators.

The lead in question does not coming from the Flint River. The water leaving the drinking water plant is clean and safe. The water traveling through the distribution system also is free of lead. The lead issues happen when the water reaches homes that have lead service lines or lead plumbing. This is important to know for two reasons: One, because the contamination happens at the homeowner level, it is very difficult to track precisely. And, the longer water sits in lead pipes, the more lead it takes on, so homes on the same block might have very different results from lead testing, based on what kind of plumbing they have and how homeowners use their water.

The City’s efforts to test for lead involve sending water sampling kits to homeowners and relying on them to participate and follow the sampling instructions, and that has been a long-standing challenge in Flint. This year, the City sent out 200 bottles in January and got 60 samples back by June. Regulators must operate on the knowledge available, and we only know what the customers let us know by participating in the City’s testing.

However, a recent announcement by local doctors that blood lead levels are rising in children residing in Flint's most at-risk zip codes added enough to the state's knowledge to spark some unusual precautionary measures. Experts are still working the data to determine exactly what it means, but the state takes lead seriously. Leaders have put forth an 11-point plan with short-term and long-term actions that will bolster our knowledge of the situation and provide a more accurate assessment of the threat level.

In the near term, the state will move immediately to provide free lead water filters for Flint water customers. We will test the drinking water at Flint schools. We will provide bottled water and formula to Flint mothers at risk. The system will be optimized for corrosion controls by the end of the month. These precautions will help protect the community while the state takes a deeper look at the drinking water system, the last round of test results and the testing protocols.

Flint residents should understand the state has been focused on Flint's water and Flint's kids for decades, but state leaders cannot make knee-jerk decisions based on unchecked allegations in the media. We have the responsibility to check facts and make decisions carefully, using the knowledge we have available to direct public resources.

Community participation plays a key role in our success. Residents who receive a testing kit from the City should recognize that this is an important opportunity to learn about their lead exposure while helping the city better track the quality of the water they provide. Residents with lead concerns should request a free home test from the city. Parents of young kids should take advantage of free blood lead level testing at the local community health department.

The plan set forth by the state speaks to a coordinated partnership among city, state and federal leaders. With community involvement, Flint's residents can be assured of more accurate and effective protection from lead exposure.

A new way forward in Flint

State regulatory leaders were disappointed by recent Free Press editorials mischaracterizing Lansing's oversight of the City of Flint's drinking water system. The paper's portrayal of the state as uncaring about drinking water quality and the community's exposure to lead are simply off the mark.

State and federal regulators run programs to monitor lead in drinking water and in kids' blood levels specifically to track lead impacts on our communities. Lead is a real concern, particularly in children, and we take our responsibility seriously.

But it is important to remember that lead is all around us. It is in soils, deposited for decades by leaded fuel and industrial processes. It is paint, in homes built in the mid-1970s or earlier. And it is unfortunately common in the plumbing and service connections of older homes, which is why the DEQ requires community water sources around the state to track and record it and take steps when levels surpass federal action thresholds.

Let's be clear: The Flint River is not contributing lead. The water leaving the drinking water plant is clean and safe. The water traveling through the distribution system also is free of lead. The lead issues are the result of water in homes that have lead service lines or lead plumbing. And because the contamination factor is at the homeowner level, it is difficult to track or assess with the kind of specificity customers would like to think regulators have. Two homes on the same block might have very different results from lead testing, based on what kind of plumbing they have and how homeowners use their water.

Moreover, the City's efforts to test for lead involve sending water sampling kits to homeowners and relying on them to participate and follow the sampling instructions, and that has been a long-standing challenge in Flint. This year, the City sent out 200 bottles in January and got 60 samples back by June. We must operate on the best knowledge we have available, and we only know what the customers let us know by participating in the City's testing.

Emerging data from local doctors, however, added to our knowledge enough to spark some unusual precautionary actions. They reported to the media that blood lead levels in Flint kids at their offices are up this year. It's still early to know exactly what that means, but because lead is a serious threat to children's development, we have decided to take some short-term precautionary measures and do more to learn exactly what is happening in the city.

The state today joined with local and federal authorities to present an 11-step action plan designed to produce a clearer picture of lead in the community's water, offer immediate protection for its kids and families with corrosion control and free lead water

filters, review and audit testing protocols, and immediately assess the schools to reassure parents their kids are not exposed to lead at the drinking fountains.

Critics in the community and at the Free Press have said we have been slow to respond to Flint's drinking water concerns. The truth is that local, state and federal authorities have been paying very close attention to Flint's drinking water all along, but we have the responsibility to check facts and use the knowledge we have to develop responsible, meaningful strategies that will help everyone clearly understand the real risk level and take appropriate actions.

We will be transparent with all we are doing and everything we determine. But Flint residents should also recognize our ultimate success depends on their help. Residents with lead concerns should have their home water tested – customers of Flint water can request it for free. Parents of younger kids should have their children get free blood lead level testing at the local community health department. Residents who receive a testing kit from the City should recognize that this is an important opportunity to learn about their lead exposure while helping the city better track the quality of the water they provide.

We are committed to doing all we can to protect drinking water and public health, in Flint and the rest of Michigan. Possibly the most difficult crisis to address in Flint right now is a crisis of public confidence. The plan set forth today should send the strong signal that residents can be assured the city, state and federal regulators are accountable, forthright and working hard to protect them. It is the community's responsibility to take the steps available to them as well. Ensuring public health is a public service, but the public can play a key role.

Hi there Jim –

Would say this issue is one that we've been actively engaged on and our administration will be outlining a collaborative, comprehensive action plan tomorrow afternoon. We believe protecting public health is paramount and safe, clean, accessible drinking water is essential . That's what we are focused on helping ensure and working together across local, state and federal levels to bring all resources and ideas to bear.

Would add that the governor and state agencies have been closely working with Flint leaders on their infrastructure challenges for a while, including providing $4.2 million in grants and restructured loan financing to provide resources needed to locate and fix infrastructure problems and add the carbon filtration system, additional testing and helping identify and provide filters.

Hope that helps.

Thanks and best,
SW

Michigan leaders to announce action plan for Flint drinking water

Friday, Oct. 2 at 1:30 p.m.
Local, state and federal leaders will host a press conference to announce a comprehensive action plan for addressing drinking water concerns in Flint. Participants will include:

- Harvey Hollins, Director of the Office of Urban Initiatives for Gov. Rick Snyder
- Dan Wyant, Director for the Michigan Department of Environmental Quality
- Nick Lyon, Director for the Michigan Department of Health and Human Services
- Dr. Eden Wells, Chief Medical Executive for the Michigan Department of Health and Human Services
- Dayne Walling, Mayor of Flint
- Other local, state and federal officials

Location:
Kettering University, Innovation Center
1300 Bluff St.
Flint, MI 48504

This is a media event open to credentialed news media only. Media who plan to attend this event should RSVP by noon Friday. Contact Rosemarie Olszewski at 517-284-6700 or olszewskir@michigan.gov.

GROUPS PETITION EPA FOR EMERGENCY RESPONSE TO

FLINT, MI DRINKING WATER CONTAMINATION

City and state agencies have failed to fix the public health crisis that imperils children's health

CHICAGO (October 1, 2015) – In response to the ongoing drinking water crisis in Flint, Michigan, a coalition of local citizens and national groups petitioned the Environmental Protection Agency (EPA) today to take emergency action to secure safe, lead-free water for the City's children and families.

Flint-based Coalition for Clean Water, the American Civil Liberties Union of Michigan, and the Natural Resources Defense Council joined the petition to trigger the EPA to launch a comprehensive federal response to the ongoing crisis. Under the Safe Drinking Water Act, the EPA is empowered to stop "imminent and substantial endangerment to human health" such as the elevated lead levels in Flint's drinking water.

The petition urges that EPA immediately order the City and Michigan DEQ to reconnect Flint's water system with water from the Detroit Water and Sewerage Department, and to provide Flint residents with an alternative, free source of safe drinking water that meets EPA standards, among other requests.

"Neither the City of Flint nor the State of Michigan is doing enough to fix the problem of lead in our drinking water. As evidenced by the ongoing poisoning of the children of Flint, it's time for the EPA to take immediate action to provide us with a safe water source," said LeeAnne Walters, a concerned parent from Flint and member of the Water You Fighting For, one of the organizations petitioning the EPA. "The city and state need to test for lead and copper as intended by the federal lead and copper rule," Walters added.

Highly corrosive water in the Flint River, the source of the City's drinking water, has been flowing through lead service lines in Flint's water system for more than a year. A medical study has confirmed that the number of children living in Flint with health-threatening elevated blood lead levels has risen since the City switched its water source. One study of Flint children under age five found that the proportion of children living in Flint with elevated blood levels has *doubled* since the City changed its drinking water source. The statistics are worse for younger children; those under fifteen months old had lead levels elevated 2.5 times greater after the switch to Flint River water.

The City of Flint and the state Department of Environmental Quality (DEQ) have been made aware of tap water monitoring results showing shockingly high lead levels in homes served by the City's drinking water system for months, but neither has taken the action necessary to meaningfully address the problem. There also appear to be serious issues with how the City was testing for lead in a way that appears to downplay the extent of the problem.

"Americans rightly believe that the water coming out of their taps should be safe, not exquisitely toxic. For more than a year, lead-contaminated drinking water has been flowing through Flint's pipes, faucets, and fountains. If the City and State will not address the issue, the EPA should step in to protect kids' health immediately," said Henry Henderson, Midwest Director for the Natural Resources Defense Council.

"Flint city officials, state-appointed emergency managers and the Michigan Department of Environmental Quality have all failed monumentally in their duty to provide the people of Flint with clean, safe drinking water. Now that the truth is revealed, further action is imperative," said Kary L. Moss, ACLU of Michigan executive director. "The devastating revelations from independent researchers, as well as our own nearly year-long investigation, demand an immediate, effective and comprehensive response. The EPA, along with and city officials, must exercise their full authority to guarantee that the people of Flint are protected from the hazardous water now flowing into their homes. The first step should be to overturn the emergency manager order and remove the Flint River as the city's source of water."

There is no safe level of lead exposure. The toxic effects of lead on virtually every system in the body, and particularly on the developing brains of young children, are well documented. It can also contribute to high blood pressure and other health problems in adults. Even low levels of lead in the blood have been shown to affect IQ, ability to pay attention, and academic achievement, effects that are irreversible.

Until Flint restores a safe drinking water source that meets EPA standards, residents are advised to take the following steps:

- ? Flush faucets by running water for a minimum of five (5) minutes prior to consumption;

- ? Use only cold water from taps for drinking and cooking, as warm or hot water is more likely to contain higher levels of lead;

- ? Install and use water filters that are certified to remove lead by NSF International (labeled as meeting "NSF Standard 53" for lead removal), and regularly change the filter cartridges; and

- ? Use only filtered or bottled water to prepare baby formula and food. Children, pregnant or nursing women should also use filtered or bottled water for drinking and cooking.

In addition, residents should consider taking the following additional steps where possible:

- ? Remove and clean individual faucet aerators, as lead particles and sediment can collect in the aerator screen located at the faucets;

- ? Contact a licensed plumber to replace any household plumbing that may contain lead; and

- ? Flush cold water taps after installing any new household pipes or fixtures.

RDS/Dan Wyant/Nick Lyon/Dr. Eden Wells/JA/SW- LIVE conference call with media regarding Flint water comprehensive action plan

DATE: Friday, Oct. 2, 2015

Time: 8:15-8:40 a.m. PST (11:15-11:40 AM EST)

Location: Via phone from San Fran

RDS to call: **PPI**

- Call right at 8:15 a.m.; Call will be live immediately. SW will introduce you, the other participants and open it up for your opening remarks.
- Other participants will be Dan Wyant, DEQ Director; Nick Lyon, DHHS Director; and Dr. Eden Wells, MI's Chief Medical Executive
- SW will moderate and screen reporter questions.

Purpose: Media conference call to discuss Flint water comprehensive action plan

Possible Topics:
Flint water action plan
Lead in Flint water

Handling of Flint Water issue
Reconnecting Flint to Detroit water

Media invited:
Flint area media (print, TV and radio) – Flint Journal/Ron Fonger; WJRT TV 12, WNEM TV 5, WEYI TV 25, WFNT Radio
Associated Press – Ed White
Detroit News – Jim Lynch
Detroit Free Press – Nancy Kaffer, Kristi Tanner & Kathy Gray
Michigan Radio – Steve Carmody

Agenda:

11:15-11:16 AM	SW intro; sets parameters; introduces other participants; turns over to Gov for opening remarks
11:16-11:21 AM	Governor gives opening remarks; highlights the key steps in the action plan
11:22-11:37 AM	Governor opens up for Q&A, weaving in Departmental experts as necessary and needed
11:37-11:39 AM	Governor gives closing remarks
11:39 AM	SW wraps up call; reminds reporters of embargo, 1:30 p.m. press conference and how to get a hold of everyone

Gov. Rick Snyder: Comprehensive action plan will help Flint residents address water concerns

Collaborative effort with state, federal and city leaders focuses on testing, assistance

FLINT, Mich. – Flint residents need to have access to safe, clean, water now and long into the future, Gov. Rick Snyder said, announcing a comprehensive action plan created with state, federal and city leaders to address concerns about drinking water.

The water leaving Flint's drinking water system is safe to drink, but some families with lead plumbing in their homes or connections might experience higher levels of lead in the water that comes out of their faucets.

The action plan focuses on increasing water testing, offering additional precautions for families with lead plumbing in their homes, and providing long-term solutions to address the city's water infrastructure challenges. The plan was created at Snyder's direction by the Michigan Department of Environmental Quality, and the Department of Health and Human Services, the U.S. Environmental Protection Agency, and the City of Flint.

"People are worried about their health and their families, and they need to have accurate information and know that help is available," Snyder said. "Today's action plan builds upon ongoing work with state and federal agencies and our partnership with city and community leaders. Together, we are working to ensure that all Flint residents can feel safe and address potential problems."

The city and the state also are working together to gather more data to ensure the water that leaves the treatment plant as well as the water that arrives in Flint homes is safe for all residents. The plan includes:

- Testing in Flint public schools immediately to ensure that drinking water is safe, with testing also available at no cost to any other school in Flint.
- Expanding health exposure testing of individual homes.
- Offering free water testing to Flint residents to assure their drinking water is safe.
- Accelerating an optimization of corrosion controls in the Flint drinking water system.
- Expanding a Safe Drinking Water Technical Advisory Committee to ensure the best technology, practices and science are being followed by adding an expert from the Environmental Protection Agency's Office of Research and Development to the group.
- Accelerating water system improvements to address replacing lead service lines.
- Naming Dr. Eden Wells, chief medical executive for the Michigan Department of Health and Human Services, as the Flint drinking water public health adviser.
- Providing water filters to residents with concerns or who are included in state assistance programs.
- Creating a comprehensive lead education program to make sure residents have detailed information about how to protect themselves and their homes.
- Expediting the completion of the Karegnondi Water Authority pipeline.

Residents can have their water tested by calling 810-787-6537 and pressing 1, or emailing flintwater@cityofflint.com. Additional information is available at www.michigan.gov/flintwater. State leaders have been working closely with state and federal lawmakers to tap resources at all levels of government to address concerns.

State health experts said there has been an increase in elevated childhood blood lead levels in some specific communities. Initial analysis of MDHHS data found that blood lead levels of children in Flint have followed an expected seasonal trend. While this analysis for Flint as a whole remains true, a comprehensive and detailed review breaking down data by ZIP codes

with the city revealed that MDHHS data is consistent with a study presented recently by Hurley Children's Hospital.

"While we cannot conclusively say that the water source change is the sole cause of the increase, this analysis supports our efforts as we take active steps to reduce all potential lead exposures in Flint," MDHHS Director Nick Lyon said. "As part of this, we are working closely with our public and private partners to provide Flint residents on MDHHS assistance programs with water filters and educate families about the steps they can take to reduce all lead exposures in their home."

As a part of the action plan, MDHHS is making National Sanitation Foundation certified water filters available to clients who are active Family Independence Program, Food Assistance Program, Child Development and Care or Social Security Insurance recipients.

"This action plan offers concrete steps we will take in a local, state and federal partnership to ensure all Flint residents have safe water to drink," DEQ Director Dan Wyant said. "The DEQ will work closely with the city to gather further data to ensure the water that leaves Flint's system as well as the water that arrives in Flint homes is safe to drink."

- The Action Plan -

- Testing in Flint public schools immediately to ensure that **drinking water is safe**, with testing also available at no cost to any other school in Flint.
- **Expanding health exposure testing** of individual homes.
- **Offering free water testing** to Flint residents to assure their drinking water is safe.
- **Accelerating an optimization of corrosion controls** in the Flint drinking water system.
- **Expanding a Safe Drinking Water Technical Advisory Committee** to ensure the best technology, practices and science are being followed by adding an expert from the Environmental Protection Agency's Office of Research and Development to the group.
- **Accelerate water system improvements** to address replacing lead service lines.
- Expediting the completion of the **Karegnondi Water Authority** pipeline.
- Naming Dr. Eden Wells, chief medical executive for the Michigan Department of Health and Human Services, as the **Flint drinking water public health adviser**.
- **Providing water filters** to residents with concerns or who are included in state assistance programs.
- Creating a **comprehensive lead education program** to make sure residents have detailed information about how to protect themselves and their homes.

To get your water tested for free, please call the city of Flint Water Plant at (810) 787-6537 and then press 1.
You can also email flintwater@cityofflint.com

Visit www.mi.gov/FlintWater for more information

TAKING ACTION ON FLINT WATER

www.mi.gov/FlintWater

- Tips for Flint Residents -

Lead plumbing is common in homes built prior to 1986, and anyone in the state with lead pipes in their home can take some extra precautions to minimize lead in their drinking water.

1. Get your water tested at no cost to ensure water is safe. **To get your water tested**, please call the city of Flint Water Plant at (810) 787-6537 and then press 1.

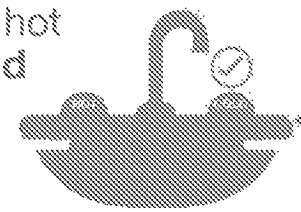
2. To ensure safe drinking water, you can also get a free filter. Please visit **mi.gov/FlintWater** to find where you can get a free filter.

3. If faucets have not been used for an extended period of time, lead particles in drinking water from plumbing can be elevated. **Flushing your pipes prior to using them** can minimize your exposure.

To flush your pipes, run the water until it gets as cold as it will get. This can take as little as 5 to 30 seconds if you have recently flushed the toilet or otherwise used water in your home, or as long as 2 to 3 minutes if you have not used any water in hours.

In the City of Flint, **running the water for 5 minutes costs between 3 and 15 cents.**

4. Additionally, more lead gets into hot water than cold water. **Use only cold water for drinking, cooking and making baby formula.**



To get your water tested for free, please call the city of Flint Water Plant at (810) 787-6537 and then press 1.
You can also email flintwater@cityofflint.com

Importance: High

That's absolutely right, Damon.

You and the station should have gotten a media advisory from the DEQ and DHHS teams. A cut and paste version is below just in case. This event is for media only.

Also, for your planning purposes only, we're looking at hosting a conference call with the Governor to walk through some highlights on a fully EMBARGOED (all hold and not reported/aired until the press conference begins) basis. Please let me know if that's workable and WJRT agrees to that. And if so, who would be representing the station.

Oct. 1, 2015

Michigan leaders to announce action plan for Flint drinking water

Friday, Oct. 2 at 1:30 p.m.
Local, state and federal leaders will host a press conference to announce a comprehensive action plan for addressing drinking water concerns in Flint. Participants will include:

- Harvey Hollins, Director of the Office of Urban Initiatives for Gov. Rick Snyder
- Dan Wyant, Director for the Michigan Department of Environmental Quality
- Nick Lyon, Director for the Michigan Department of Health and Human Services
- Dr. Eden Wells, Chief Medical Executive for the Michigan Department of Health and Human Services
- Dayne Walling, Mayor of Flint
- Other local, state and federal officials

Location:
Kettering University, Innovation Center
1300 Bluff St.
Flint, MI 48504

This is a media event open to credentialed news media only. Media who plan to attend this event should RSVP by noon Friday. Contact Rosemarie Olszewski at 517-284-6700 or olszewskir@michigan.gov.

Hello,

We are hearing from newspaper reports that a press conference is set for tomorrow at 1:30 pm at Kettering University with state and city officials to discuss next steps for Flint water.

Wanted to inquire about such a meeting taking place.

Thank you,
Damon

Thank you for press conference details.
We agree to the terms of conference call with Governor.

As far as which reporter will do it - it depends on what time it will be taking place. It could be a day side reporter or "afternoon/night side reporter". Is that something we can touch base with you on tomorrow prior to it happening?

Damon

That's absolutely right, Damon.

You and the station should have gotten a media advisory from the DEQ and DHHS teams. A cut and paste version is below just in case. This event is for media only.

Also, for your planning purposes only, we're looking at hosting a conference call with the Governor to walk through some highlights on a fully EMBARGOED (all hold and not reported/aired until the press conference begins) basis. Please let me know if that's workable and WJRT agrees to that. And if so, who would be representing the station.

Oct. 1, 2015

Michigan leaders to announce action plan for Flint drinking water

Friday, Oct. 2 at 1:30 p.m.
Local, state and federal leaders will host a press conference to announce a comprehensive action plan for addressing drinking water concerns in Flint. Participants will include:

* Harvey Hollins, Director of the Office of Urban Initiatives for Gov. Rick Snyder
* Dan Wyant, Director for the Michigan Department of Environmental Quality

* Nick Lyon, Director for the Michigan Department of Health and Human Services
* Dr. Eden Wells, Chief Medical Executive for the Michigan Department of Health and Human Services
* Dayne Walling, Mayor of Flint
* Other local, state and federal officials

Location:
Kettering University, Innovation Center
1300 Bluff St.
Flint, MI 48504

This is a media event open to credentialed news media only. Media who plan to attend this event should RSVP by noon Friday. Contact Rosemarie Olszewski at 517-284-6700 or olszewskir@michigan.gov.

Importance: High

Hi all –

Per conversations today, here are the details for Friday's embargoed media conference call.

Given some of the changing information, we added in a quick pre-brief with the Governor from 11 to 11:10 a.m. to give us a chance to go over any last details and finalize flow. This will be followed by the actual media conf. call from 11:15 to 11:40 a.m. Know that folks will be needing to head to Flint immediately afterward.

Sounds like we'll have Dan, Nick and Dr. Wells in person. That's great and will work best when most everyone is in the same room. The location is Romney Building, 1st floor communications conference room. The governor will be joining us from phone.

We'll need to be fairly quick in overview and framing comments so we can get to as many Qs as possible.

Please let me know if anyone has any Qs, concerns or needs anything else at all. Or if you'd like a listen only line for anyone back in the depts. to catch the call.

Otherwise, see you in the Romney by 11 a.m. tomorrow.

Thanks so much!
SW

p.s. Also attached key documents as stand right now – release, 2 infographics and the high level points.

Agenda:

11:15-11:16 AM	SW intro; sets parameters; introduces other participants; turns over to Governor for opening remarks
11:16-11:20 AM	Governor gives opening remarks; highlights reason for state action; introduces Director Wyant
11:20-11:24 AM	Director Wyant remarks; highlights key steps in the action plan; introduces Director Lyon
11:24-11:27 AM	Director Lyon remarks; highlights key health components of the plan and mentions Dr. Wells; turns back to Governor
11:27-11:37 AM	Governor opens it up for Q&A
11:37-11:39 AM	Governor closing remarks
11:39-11:40 AM	SW wraps up call; reminds reporters of embargo, 1:30 p.m. press conference, and how to get a hold of everyone

Gov. Rick Snyder: Comprehensive action plan will help Flint residents address water concerns

Collaborative effort with state, federal and city leaders focuses on testing, assistance

FLINT, Mich. – Flint residents need to have access to safe, clean, water now and long into the future, Gov. Rick Snyder said, announcing a comprehensive action plan created with state, federal and city leaders to address concerns about drinking water.

The water leaving Flint's drinking water system is safe to drink, but some families with lead plumbing in their homes or service connections could experience higher levels of lead in the water that comes out of their faucets.

The action plan focuses on increasing water testing, offering additional precautions for families with lead plumbing in their homes, and providing long-term solutions to address the city's water infrastructure challenges. The plan was created at Snyder's direction by the Michigan Departments of Environmental Quality (DEQ) and Health and Human Services (DHHS), the U.S. Environmental Protection Agency, and the city of Flint.

"We are focused on helping ensure safe, clean, accessible drinking water and addressing and mitigating concerns and protecting public health," Snyder said. "Today's action plan builds upon ongoing work with local, state and federal agencies and our partnership with city and community leaders. Together, we are working to ensure that all Flint residents have accurate information and know that help is available to address potential problems."

The city and the state also are working together to gather more data to ensure the water that leaves the treatment plant as well as the water that arrives in Flint homes is safe for all residents. The plan includes:

- Testing in Flint public schools immediately to ensure that drinking water is safe, with testing also available at no cost to any other school in Flint.
- Offering free water testing to Flint residents to assure their drinking water is safe.
- Providing free water filters to residents with concerns or who are included in state assistance programs.
- Expanding health exposure testing of individual homes.

- Accelerating corrosion controls in the Flint drinking water system.
- Accelerating water system improvements to address replacing lead service lines.
- Expediting the completion of the Karegnondi Water Authority pipeline.
- Expanding a Safe Drinking Water Technical Advisory Committee to ensure the best technology, practices and science are being followed by adding an expert from the Environmental Protection Agency's Office of Research and Development to the group.
- Naming Dr. Eden Wells, chief medical executive for the Michigan Department of Health and Human Services, as the Flint drinking water public health adviser.
- Boosting a comprehensive lead education program to make sure residents have detailed information about how to protect themselves and their homes.

Residents can have their water tested by calling 810-787-6537 and pressing 1, or emailing flintwater@cityofflint.com. The DEQ is covering the cost of this testing.

State leaders have been working closely with state and federal lawmakers to tap resources at all levels of government to address concerns.

State health experts said there has been an increase in elevated childhood blood lead levels in some specific communities. Initial analysis of MDHHS data found that blood lead levels of children in Flint have followed an expected seasonal trend. While this analysis for Flint as a whole remains true, a comprehensive and detailed review breaking down data by ZIP codes with the city revealed that MDHHS data is consistent with a study presented recently by Hurley Children's Hospital.

"While we cannot conclusively say that the water source change is the sole cause of the increase, this analysis supports our efforts as we take active steps to reduce all potential lead exposures in Flint," MDHHS Director Nick Lyon said. "As part of this, we are working closely with our public and private partners to provide Flint residents on MDHHS assistance programs with free water filters and inform families about the steps they can take to reduce all lead exposures in their home."

As a part of the action plan, MDHHS is making National Sanitation Foundation certified water filters available to clients who are active Family Independence Program, Food Assistance Program, Child Development and Care or Social Security Insurance recipients.

"This action plan offers concrete steps we will take in a local, state and federal partnership to ensure all Flint residents have safe water to drink," DEQ Director Dan Wyant said. "The DEQ will work closely with the city to gather further data to ensure the water that leaves Flint's system as well as the water that arrives in Flint homes is safe to drink."

Additional information is available at www.michigan.gov/flintwater.

###

TAKING ACTION ON FLINT WATER

www.mi.gov/FlintWater

- The Action Plan -

- Testing in Flint public schools immediately to ensure that **drinking water is safe**, with testing also available at no cost to any other school in Flint.
- **Offering free water testing** to Flint residents to assure their drinking water is safe.
- **Providing free water filters** to residents with concerns or who are included in state assistance programs.
- **Expanding health exposure testing** of individual homes.
- **Accelerating corrosion controls** in the Flint drinking water system.
- **Accelerating water system improvements** to address replacing lead service lines.
- Expediting the completion of the **Karegnondi Water Authority** pipeline.
- **Expanding a Safe Drinking Water Technical Advisory Committee** to ensure the best technology, practices and science are being followed by adding an expert from the Environmental Protection Agency's Office of Research and Development to the group.
- Naming Dr. Eden Wells, chief medical executive for the Michigan Department of Health and Human Services, as the **Flint drinking water public health adviser**.
- Boosting a **comprehensive lead education program** to make sure residents have detailed information about how to protect themselves and their homes.

To get your water tested for free, please call the city of Flint Water Plant at (810) 787-6537 and then press 1.
You can also email flintwater@cityofflint.com

Visit www.mi.gov/FlintWater for more information

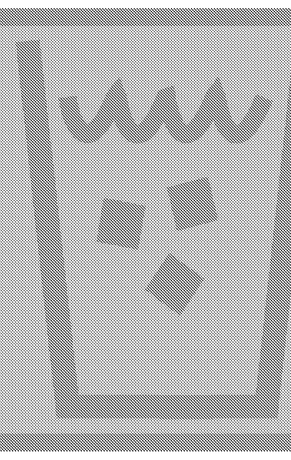
TAKING ACTION ON FLINT WATER

www.mi.gov/FlintWater

- Tips for Flint Residents -

Lead plumbing is common in homes built prior to 1986, and **anyone in the state with lead pipes in their home can take some extra precautions** to minimize lead in their drinking water.

1. Get your water tested at no cost to ensure water is safe. **To get your water tested**, please call the city of Flint Water Plant at (810) 787-6537 and then press 1.

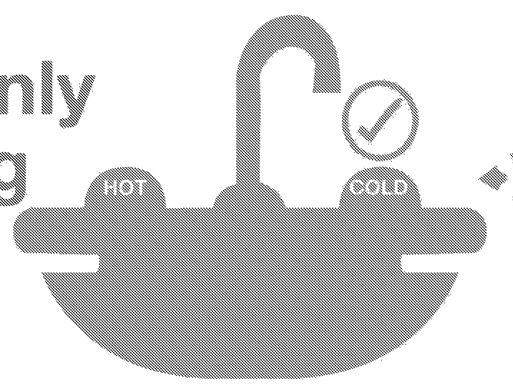


2. To ensure safe drinking water, you can also get a free filter. Please visit **mi.gov/FlintWater** to find where you can get a free filter.

3. It takes time for lead to accumulate in drinking water from plumbing, and so **flushing your pipes prior to using them** can minimize your exposure.

- To flush your pipes, run the water until it's as cold as it will go. This can take as little as 5 to 30 seconds if you have recently flushed the toilet or otherwise used water in your home, or as long as 2 to 5 minutes if you have not used any water in hours.
- In the city of Flint, **running the water for 5 minutes costs between 3 and 16 cents.**

4. Additionally, more lead gets into hot water than cold water. **Use only cold water for drinking, cooking and making baby formula.**



To get your water tested for free, please call the city of Flint Water Plant at (810) 787-6537 and then press 1.
You can also email flintwater@cityofflint.com

Visit **www.mi.gov/FlintWater** for more information

Flint Drinking Water Action Plan
Talking Points

Overall Messaging

- Repeated testing shows the water leaving Flint's drinking water system is safe to drink and meets all federal guidelines, including lead.
- After the switch the Flint River, the compliance testing protocol yielded results of 6 ppb in December 2014 and 11 ppb in June 2015. Both results were below the federal action level of 15 ppb.
- However, we recognize some residents experience higher levels of lead in the water that comes out of their faucets because of lead plumbing in the home, and that's a concern.
- Out of an abundance of caution, we want to address the needs of all Flint families, and so we have developed an action plan that includes both short- and long-term solutions.
- The state plan focuses on increasing water testing, offering additional precautions for families, and providing long-term solutions to address the city's water infrastructure.

Messaging regarding the action plan

The city and the state are working together to gather more data to ensure the water that leaves the treatment plant as well as the water that arrives in Flint homes is safe for all residents.

- **Immediately test Flint public schools to ensure that drinking water is safe. Testing will also be available at no cost to any other school in Flint.**
    - Although Flint's drinking water meets all federal requirements, the state wants to take extra steps to ensure that drinking water is safe for the city's children.
    - The state will fund this testing (about $30,000) at no cost to the city or the local schools, and make the results publicly available.

- **Expand health exposure testing of individual residences.**
    - To double-check its data as well as provide residents with an additional layer of assurance, the DEQ will conduct more tests at Flint properties.
    - The Technical Advisory Committee will determine the scope of this expanded testing.

- **Offer water testing at no cost to Flint residents to assure water is safe.**
    - Although all testing indicates water in the city of Flint meets all federal standards, we understand some residents are concerned.
    - To ensure water in individual homes is safe, free water testing is available to all Flint residents.
    - We encourage anyone with a concern to get their water tested.
    - Contact the city water department to have your water tested.

- **Accelerate optimizing corrosion controls in the Flint drinking water system.**

- A fully optimized corrosion control system can help coat the inside of pipes to minimize the amount of lead that enters the drinking water after it leaves the treatment plant.
- This is a helpful step that can help minimize lead system-wide, and we're pleased the city is moving to take this step.
- If asked: This was not initially required because a fully optimized corrosion control system is not federally required in many water systems. Even today, since Flint is meeting all federal standards, this fully optimized system is not required. However, to address public concerns and ensure every possible precaution is taken, the city is moving forward with installing this corrosion control system.

- **Expand the "Safe Drinking Water Technical Advisory Committee" to ensure the best technology, practices and science are being utilized, and add an expert from the EPA's Office of Research and Development to the group.**
  - The Safe Drinking Water Technical Advisory Committee will meet Oct. 7 to discuss fully optimizing the corrosion control system, expanding testing of at-risk properties, and other topics.
  - Tom Burke, the Deputy Assistant Administrator of EPA's Office of Research and Development as well as the EPA's Science Advisor, will participate on the committee. Prior to joining EPA, he held prominent positions at the Johns Hopkins Bloomberg School of Public Health and founded the Johns Hopkins Risk Sciences and Public Policy Institute. He brings substantial expertise, and we're pleased he is able join the committee.

- **Accelerate water system improvements to address replacement of lead service lines.**
  - Regardless of the drinking water source – whether it be DWSD, the Flint River or Lake Huron – the only permanent fix for lead is to replace all 18,000 of the private lead service lines in the city. These are the lines on private property that lead from the curb to individual homes.
  - This is a problem in communities statewide, and one we want to address with a long-term solution.
  - The state and EPA are working together to find a way for the city to access Drinking Water Revolving Loan funds for the work.

- **Expedite completion of Karegnondi Water Authority.**
  - The move to the Flint River was always a temporary measure until the connection to the KWA and to Lake Huron was completed.
  - This is the ultimate goal of the venture, and the state and locals will work together to speed up completion of the connection.
  -

- **Name Dr. Eden Wells as Flint Drinking Water Public Health Advisor.**
  - Dr. Wells is the Director for the Preventive Medicine Residency at the University of Michigan School of Public Health in Ann Arbor as well as the Chief Medical Executive for MDHHS.

- She brings years of experience in epidemiology and preventative medicine to the issue, and we're thrilled to have her expertise.
- Dr. Wells will coordinate with Hurley Medical Center to share data on blood lead levels in children, as well as address other emerging issues.

- **Provide water filters to residents of Flint.**
  - As an additional precaution, water filters will be available to low-income families.
  - This provides another safeguard to ensure everyone in the city of Flint has access to clean drinking water that they feel confident drinking.

- **Expand a comprehensive lead education initiative.**
  - Lead plumbing is common in homes built prior to 1986, and anyone in the state with lead pipes in their home can take some extra precautions to minimize lead in their drinking water.
  - It takes time for lead to accumulate in drinking water from plumbing, and so flushing your pipes prior to using them can minimize your exposure.
    - To flush your pipes, run the water until it's as cold as it will go. This can take as little as 5 to 30 seconds if you have recently flushed the toilet or otherwise used water in your home, or as long as 2 to 5 minutes if you have not used any water in hours.
    - In the city of Flint, running the water for 5 minutes only costs about 3-16 cents, depending on your faucet.
  - Additionally, more lead gets into hot water than cold water. Use only cold water for drinking, cooking and making baby formula.

Greetings, Dave –

You and the station should have gotten a media advisory from the DEQ and DHHS teams about a news conference tomorrow in Flint – though the Governor won't be there for that specific event. A cut and paste version is below just in case. This event is for media only.

However and for your planning purposes only, we're looking at hosting a conference call with the Governor at about 11:15 a.m. to answer Qs and walk through some highlights on a fully EMBARGOED (all held and not reported/aired until the press conference begins) basis. Please let me know if that's workable and WEYI agrees to that. And if so, who would be representing the station.

Thanks and look forward to working with you on this.

Michigan leaders to announce action plan for Flint drinking water

Friday, Oct. 2 at 1:30 p.m.
Local, state and federal leaders will host a press conference to announce a comprehensive action plan for addressing drinking water concerns in Flint. Participants will include:

* Harvey Hollins, Director of the Office of Urban Initiatives for Gov. Rick Snyder
* Dan Wyant, Director for the Michigan Department of Environmental Quality
* Nick Lyon, Director for the Michigan Department of Health and Human Services
* Dr. Eden Wells, Chief Medical Executive for the Michigan Department of Health and Human Services
* Dayne Walling, Mayor of Flint
* Other local, state and federal officials

Location:
Kettering University, Innovation Center
1300 Bluff St.
Flint, MI 48504

This is a media event open to credentialed news media only. Media who plan to attend this event should RSVP by noon Friday. Contact Rosemarie Olszewski at 517-284-6700 or olszewskir@michigan.gov.

No, provided you've connected with and heard from Maggie P at DEQ. They were reaching out to local legislators -- Ananich, Neely and Phelps -- to fill them in on plan and invite them. Just want to make sure everyone is loop and aware of everything.

Haven't heard latest on that yet.

Subject: HIGH PRIORITY: Updated Flint water action plan
Importance: High

Hi all –

Attached are several items pulled together to help announce the new comprehensive action plan related to Flint water tomorrow. This build upon past efforts and as aimed to be a real collaborative effort with local, state and federal agencies, along with city and community leaders. These items are:

- News release
- Infographics – one to summarize action plan and one to help highlight the tips for Flint residents

- High level points

The Governor, along with Dan Wyant, Nick Lyon, and Dr. Eden Wells are slated to do an embargoed media conference call with select reporters at 11:15 a.m. tomorrow.

This will be followed by a 1:30 p.m. press conference in Flint led by Directors Wyant and Lyon, moderated by Harvey, and including Dr. Wells and Flint Mayor Dayne Walling. EPA Region 5 Administrator Susan Headman dropped out late today due to some pending litigation. It's possible that Cong. Kildee and/or State Sen. Anaich and State Reps. Neely and Phelps may be participating as well.

There will also be a clearinghouse of Flint water information available at a new web site – www.michigan.gov/FlintWater. It will be live at 1 p.m. tomorrow.

Please review and let us know of any Qs, concerns, last edits, of if anything else is needed at all.

They are going through last review and refinement now. Please do not share materials until we know they are final.

Thanks much,
SW

Importance: High

Hi there Ron -

Per earlier conversation, below is information for a media conference call with Gov. Snyder and Cabinet leaders – MI Dept of Environmental Quality Director Dan Wyant of the, MI Dept of Health & Human Services Director Nick Lyon of the, and Dr. Eden Wells, the state's Chief Medical Executive – to outline a comprehensive action plan to further address Flint water concerns.

They will also be available to answer Qs.

As agreed by you and your Flint Journal/MLive team, this information is fully embargoed until when the 1:30 p.m. press conference later today in Flint begins.

SPECIFIC CALL-IN DETAILS:
Topic: Flint water action plan
Date: Friday, Oct. 2
Time: 11:15 a.m.
Conference Line call-in number: PPI
Conference line passcode: PPI
** To ask a question during that portion of the call, please press "0." (but please refrain from pressing zero until opening remarks are completed to help ensure you don't miss any of the details).

****NOTE**:** This invitation is for planning purposes only and meant for you and/or your outlet as there are a limited number of participant lines. Please let us know if you wish to have someone else participate so we can work to accommodate.

Please let me know if you need anything else at all in interim.

Thanks so much,
SW

Importance: High

Hi all –

Per conversations today, here are the details for Friday's embargoed media conference call.

Given some of the changing information, we added in a quick pre-brief with the Governor from 11 to 11:10 a.m. to give us a chance to go over any last details and finalize flow. This will be followed by the actual media conf. call from 11:15 to 11:40 a.m. Know that folks will be needing to head to Flint immediately afterward.

Sounds like we'll have Dan, Nick and Dr. Wells in person. That's great and will work best when most everyone is in the same room. The location is Romney Building, 1st floor communications conference room. The governor will be joining us from phone.

We'll need to be fairly quick in overview and framing comments so we can get to as many Qs as possible.

Please let me know if anyone has any Qs, concerns or needs anything else at all. Or if you'd like a listen only line for anyone back in the depts. to catch the call.

Otherwise, see you in the Romney by 11 a.m. tomorrow.

Thanks so much!
SW

p.s. Also attached key documents as stand right now – release, 2 infographics and the high level points.

Agenda:
11:15-11:16 AM SW intro; sets parameters; introduces other participants; turns over to Governor for opening remarks

11:16-11:20 AM Governor gives opening remarks; highlights reason for state action; introduces Director Wyant
11:20-11:24 AM Director Wyant remarks; highlights key steps in the action plan; introduces Director Lyon
11:24-11:27 AM Director Lyon remarks; highlights key health components of the plan and mentions Dr. Wells; turns back to Governor
11:27-11:37 AM Governor opens it up for Q&A
11:37-11:39 AM Governor closing remarks
11:39-11:40 AM SW wraps up call; reminds reporters of embargo, 1:30 p.m. press conference, and how to get a hold of everyone

Gov. Rick Snyder: Comprehensive action plan will help Flint residents address water concerns

Collaborative effort with state, federal and city leaders focuses on testing, assistance

FLINT, Mich. – Flint residents need to have access to safe, clean, water now and long into the future, Gov. Rick Snyder said, announcing a comprehensive action plan created with state, federal and city leaders to address concerns about drinking water.

The water leaving Flint's drinking water system is safe to drink, but some families with lead plumbing in their homes or service connections could experience higher levels of lead in the water that comes out of their faucets.

The action plan focuses on increasing water testing, offering additional precautions for families with lead plumbing in their homes, and providing long-term solutions to address the city's water infrastructure challenges. The plan was created at Snyder's direction by the Michigan Departments of Environmental Quality (DEQ) and Health and Human Services (DHHS), the U.S. Environmental Protection Agency, and the city of Flint.

"We are focused on helping ensure safe, clean, accessible drinking water and addressing and mitigating concerns and protecting public health," Snyder said. "Today's action plan builds upon ongoing work with local, state and federal agencies and our partnership with city and community leaders. Together, we are working to ensure that all Flint residents have accurate information and know that help is available to address potential problems."

The city and the state also are working together to gather more data to ensure the water that leaves the treatment plant as well as the water that arrives in Flint homes is safe for all residents. The plan includes:

- Testing in Flint public schools immediately to ensure that drinking water is safe, with testing also available at no cost to any other school in Flint.
- Offering free water testing to Flint residents to assure their drinking water is safe.
- Providing free water filters to residents with concerns or who are included in state assistance programs.
- Expanding health exposure testing of individual homes.

- Accelerating corrosion controls in the Flint drinking water system.
- Accelerating water system improvements to address replacing lead service lines.
- Expediting the completion of the Karegnondi Water Authority pipeline.
- Expanding a Safe Drinking Water Technical Advisory Committee to ensure the best technology, practices and science are being followed by adding an expert from the Environmental Protection Agency's Office of Research and Development to the group.
- Naming Dr. Eden Wells, chief medical executive for the Michigan Department of Health and Human Services, as the Flint drinking water public health adviser.
- Boosting a comprehensive lead education program to make sure residents have detailed information about how to protect themselves and their homes.

Residents can have their water tested by calling 810-787-6537 and pressing 1, or emailing flintwater@cityofflint.com. The DEQ is covering the cost of this testing.

State leaders have been working closely with state and federal lawmakers to tap resources at all levels of government to address concerns.

State health experts said there has been an increase in elevated childhood blood lead levels in some specific communities. Initial analysis of MDHHS data found that blood lead levels of children in Flint have followed an expected seasonal trend. While this analysis for Flint as a whole remains true, a comprehensive and detailed review breaking down data by ZIP codes with the city revealed that MDHHS data is consistent with a study presented recently by Hurley Children's Hospital.

"While we cannot conclusively say that the water source change is the sole cause of the increase, this analysis supports our efforts as we take active steps to reduce all potential lead exposures in Flint," MDHHS Director Nick Lyon said. "As part of this, we are working closely with our public and private partners to provide Flint residents on MDHHS assistance programs with free water filters and inform families about the steps they can take to reduce all lead exposures in their home."

As a part of the action plan, MDHHS is making National Sanitation Foundation certified water filters available to clients who are active Family Independence Program, Food Assistance Program, Child Development and Care or Social Security Insurance recipients.

"This action plan offers concrete steps we will take in a local, state and federal partnership to ensure all Flint residents have safe water to drink," DEQ Director Dan Wyant said. "The DEQ will work closely with the city to gather further data to ensure the water that leaves Flint's system as well as the water that arrives in Flint homes is safe to drink."

Additional information is available at www.michigan.gov/flintwater.

###

TAKING ACTION ON FLINT WATER

www.mi.gov/FlintWater

- The Action Plan -

- Testing in Flint public schools immediately to ensure that **drinking water is safe**, with testing also available at no cost to any other school in Flint.
- **Offering free water testing** to Flint residents to assure their drinking water is safe.
- **Providing free water filters** to residents with concerns or who are included in state assistance programs.
- **Expanding health exposure testing** of individual homes.
- **Accelerating corrosion controls** in the Flint drinking water system.
- **Accelerating water system improvements** to address replacing lead service lines.
- Expediting the completion of the **Karegnondi Water Authority** pipeline.
- **Expanding a Safe Drinking Water Technical Advisory Committee** to ensure the best technology, practices and science are being followed by adding an expert from the Environmental Protection Agency's Office of Research and Development to the group.
- Naming Dr. Eden Wells, chief medical executive for the Michigan Department of Health and Human Services, as the **Flint drinking water public health adviser**.
- Boosting a **comprehensive lead education program** to make sure residents have detailed information about how to protect themselves and their homes.

To get your water tested for free, please call the city of Flint Water Plant at (810) 787-6537 and then press 1.
You can also email flintwater@cityofflint.com

Visit www.mi.gov/FlintWater for more information

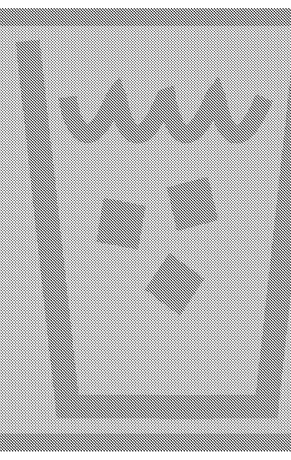
TAKING ACTION ON FLINT WATER

www.mi.gov/FlintWater

- Tips for Flint Residents -

Lead plumbing is common in homes built prior to 1986, and **anyone in the state with lead pipes in their home can take some extra precautions** to minimize lead in their drinking water.

1. Get your water tested at no cost to ensure water is safe. **To get your water tested**, please call the city of Flint Water Plant at (810) 787-6537 and then press 1.

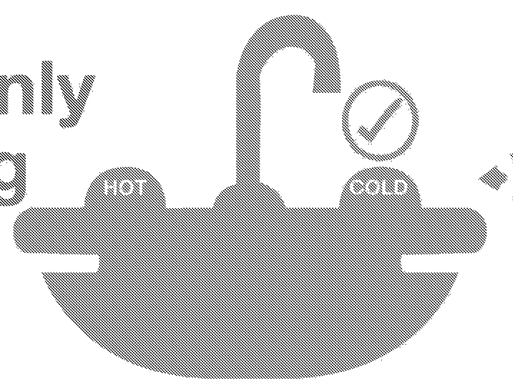


2. To ensure safe drinking water, you can also get a free filter. Please visit **mi.gov/FlintWater** to find where you can get a free filter.

3. It takes time for lead to accumulate in drinking water from plumbing, and so **flushing your pipes prior to using them** can minimize your exposure.

- To flush your pipes, run the water until it's as cold as it will go. This can take as little as 5 to 30 seconds if you have recently flushed the toilet or otherwise used water in your home, or as long as 2 to 5 minutes if you have not used any water in hours.
- In the city of Flint, **running the water for 5 minutes costs between 3 and 16 cents.**

4. Additionally, more lead gets into hot water than cold water. **Use only cold water for drinking, cooking and making baby formula.**



To get your water tested for free, please call the city of Flint Water Plant at (810) 787-6537 and then press 1.
You can also email flintwater@cityofflint.com

Visit **www.mi.gov/FlintWater** for more information

Flint Drinking Water Action Plan
Talking Points

Overall Messaging

- Repeated testing shows the water leaving Flint's drinking water system is safe to drink and meets all federal guidelines, including lead.
- After the switch the Flint River, the compliance testing protocol yielded results of 6 ppb in December 2014 and 11 ppb in June 2015. Both results were below the federal action level of 15 ppb.
- However, we recognize some residents experience higher levels of lead in the water that comes out of their faucets because of lead plumbing in the home, and that's a concern.
- Out of an abundance of caution, we want to address the needs of all Flint families, and so we have developed an action plan that includes both short- and long-term solutions.
- The state plan focuses on increasing water testing, offering additional precautions for families, and providing long-term solutions to address the city's water infrastructure.

Messaging regarding the action plan

The city and the state are working together to gather more data to ensure the water that leaves the treatment plant as well as the water that arrives in Flint homes is safe for all residents.

- **Immediately test Flint public schools to ensure that drinking water is safe. Testing will also be available at no cost to any other school in Flint.**
    - Although Flint's drinking water meets all federal requirements, the state wants to take extra steps to ensure that drinking water is safe for the city's children.
    - The state will fund this testing (about $30,000) at no cost to the city or the local schools, and make the results publicly available.

- **Expand health exposure testing of individual residences.**
    - To double-check its data as well as provide residents with an additional layer of assurance, the DEQ will conduct more tests at Flint properties.
    - The Technical Advisory Committee will determine the scope of this expanded testing.

- **Offer water testing at no cost to Flint residents to assure water is safe.**
    - Although all testing indicates water in the city of Flint meets all federal standards, we understand some residents are concerned.
    - To ensure water in individual homes is safe, free water testing is available to all Flint residents.
    - We encourage anyone with a concern to get their water tested.
    - Contact the city water department to have your water tested.

- **Accelerate optimizing corrosion controls in the Flint drinking water system.**

- A fully optimized corrosion control system can help coat the inside of pipes to minimize the amount of lead that enters the drinking water after it leaves the treatment plant.
- This is a helpful step that can help minimize lead system-wide, and we're pleased the city is moving to take this step.
- If asked: This was not initially required because a fully optimized corrosion control system is not federally required in many water systems. Even today, since Flint is meeting all federal standards, this fully optimized system is not required. However, to address public concerns and ensure every possible precaution is taken, the city is moving forward with installing this corrosion control system.

- **Expand the "Safe Drinking Water Technical Advisory Committee" to ensure the best technology, practices and science are being utilized, and add an expert from the EPA's Office of Research and Development to the group.**
  - The Safe Drinking Water Technical Advisory Committee will meet Oct. 7 to discuss fully optimizing the corrosion control system, expanding testing of at-risk properties, and other topics.
  - Tom Burke, the Deputy Assistant Administrator of EPA's Office of Research and Development as well as the EPA's Science Advisor, will participate on the committee. Prior to joining EPA, he held prominent positions at the Johns Hopkins Bloomberg School of Public Health and founded the Johns Hopkins Risk Sciences and Public Policy Institute. He brings substantial expertise, and we're pleased he is able join the committee.

- **Accelerate water system improvements to address replacement of lead service lines.**
  - Regardless of the drinking water source – whether it be DWSD, the Flint River or Lake Huron – the only permanent fix for lead is to replace all 18,000 of the private lead service lines in the city. These are the lines on private property that lead from the curb to individual homes.
  - This is a problem in communities statewide, and one we want to address with a long-term solution.
  - The state and EPA are working together to find a way for the city to access Drinking Water Revolving Loan funds for the work.

- **Expedite completion of Karegnondi Water Authority.**
  - The move to the Flint River was always a temporary measure until the connection to the KWA and to Lake Huron was completed.
  - This is the ultimate goal of the venture, and the state and locals will work together to speed up completion of the connection.
  -

- **Name Dr. Eden Wells as Flint Drinking Water Public Health Advisor.**
  - Dr. Wells is the Director for the Preventive Medicine Residency at the University of Michigan School of Public Health in Ann Arbor as well as the Chief Medical Executive for MDHHS.

- She brings years of experience in epidemiology and preventative medicine to the issue, and we're thrilled to have her expertise.
- Dr. Wells will coordinate with Hurley Medical Center to share data on blood lead levels in children, as well as address other emerging issues.

- **Provide water filters to residents of Flint.**
  - As an additional precaution, water filters will be available to low-income families.
  - This provides another safeguard to ensure everyone in the city of Flint has access to clean drinking water that they feel confident drinking.

- **Expand a comprehensive lead education initiative.**
  - Lead plumbing is common in homes built prior to 1986, and anyone in the state with lead pipes in their home can take some extra precautions to minimize lead in their drinking water.
  - It takes time for lead to accumulate in drinking water from plumbing, and so flushing your pipes prior to using them can minimize your exposure.
    - To flush your pipes, run the water until it's as cold as it will go. This can take as little as 5 to 30 seconds if you have recently flushed the toilet or otherwise used water in your home, or as long as 2 to 5 minutes if you have not used any water in hours.
    - In the city of Flint, running the water for 5 minutes only costs about 3-16 cents, depending on your faucet.
  - Additionally, more lead gets into hot water than cold water. Use only cold water for drinking, cooking and making baby formula.

- Reviewing my notes, I'm not sure I got a definitive answer from Wyant about corrosion control at the Flint water treatment plant.
  Was corrosion control in use? I'd like a simple yes or no, here – if no, obviously, why not – if yes, what was it, and why was – if any – what sounds like a lesser degree of corrosion control being used? I would like the names of the specific technologies/chemicals that were in use in the past, if in fact corrosion control was being used at the Flint plant, and the specific technologies that will be used going forward.
- Was the MDEQ unaware that there were aging lead service lines in Flint, and that those would increase the lead risk? Were the Flint water treatment folks? Why was this not taken into account in developing the water treatment count?
- Wyant said that "two consecutive back to back tests" showed there was a problem; when were those tests performed and when were the results available?

Obviously I would like to use this information in a piece we'll have ready to go at 1:30p so ASAP would be great.

Sierra Club Calls For Urgent Action on Snyder Water Plan, Probe of Michigan Department of Environmental Quality

FOR IMMEDIATE RELEASE

Friday, October 2, 2015

Media Contact: David Holtz, david@davidholtz.org/313-300-4454

LANSING—Sierra Club today called on Gov. Rick Snyder to act decisively and urgently to implement plans to end the public health crisis in Flint and to support an independent investigation into the Michigan Department of Environmental Quality's oversight of federal drinking water laws.

"Given the clear risks to vulnerable populations and the state's public health responsibilities this is a time for strong leadership and accountability from state public health authorities and the governor," said **David Holtz**, **Sierra Club** Michigan Chair. "The governor, finally, is assuming direct responsibility for responding to a crisis that every day is damaging the health of Flint's children. His actions should be much stronger, however, and he needs to find out how we got to the point where Flint children are drinking lead and what the MDEQ's role was in those decisions and actions."

The Snyder administration today outlined a series of steps they will take to address Flint's public health crisis. They include accelerated and expanded water treatment, providing filters to some residents, expanded testing of residents and an examination of whether to temporarily switch back to the Detroit water system. Replacing Flint's lead pipes over time were also on the administration's to-do list.

Sierra Club Michigan Director **Gail Philbin** said only independent testing of Flint's water for lead will be credible because of questions raised regarding the city and MDEQ's handling of past test results.

"Parents need to know drinking water is safe for their children," said Philbin. "Immediately they need credible testing for lead and alternatives to contaminated water. The likely best way

to ensure safe drinking water in Flint is to change to a safe and reliable drinking water source and that's Detroit's water system and to eliminate lead pipes."

Investigations by the ACLU and nationally recognized drinking water expert Marc Edwards at Virginia Tech University have pointed to failures in testing and enforcement of federal drinking water standards by the Michigan Department of Environmental Quality. An MDEQ spokesman reportedly attacked Virginia Tech's results and complained about the "near-hysteria" over Flint's water supply. The Virginia Tech researcher documented what he called "mistakes and deception" involving the MDEQ's handling of Flint's drinking water problem.

"Along with ensuring Flint residents aren't drinking lead, we need for the governor to ensure that the public gets answers to what happened and why we ended up with a public health crisis in Flint," said Holtz. "That will require an independent investigation. If that's something Governor Snyder is unwilling to do we need federal authorities to determine to what extent, if any, state officials who are responsible for implementing federal drinking water standards are accountable for the public health crisis in Flint."

The Greater Flint Health Coalition, a group of health professionals in the Flint community, has concluded that Flint's drinking water is unsafe because of elevated lead blood levels. The city of Flint began using the Flint River as a water source in April 2014 following a decision made by emergency manager Darnell Earley.

Centers for Disease Control and Prevention studies show that lead in drinking water can cause serious health problems and that the greatest risk of lead exposure is to infants, young children and pregnant women. Scientists have linked the effects of lead on the brain with lowered IQ in children.

Subject: water filter distribution

Sara:
I'm expecting to write a story about the efforts to distribute water filters that have so far come into Flint from several sources.
Are the state-funded filters being distributed through the Genesee County Health Department and United Way or through state offices such as the Department of Human Services, or both?
Have the state-funded filters begun to arrive in Flint and does your office want to comment on the efforts to distribute the filters so far?
You may have heard that the initial distribution was expanded Saturday to include all residents because there were far more filters than low income families that qualified who turned out to request one.
Thanks for your help.

At a meeting with multiple community partners today, our local MDHHS office realized they could do distribution from the 2 Flint offices as long as the local community action agency could assist them in storing the larger quantities of filters.

Locally, the groups will be issuing a press release from the local health department discussing distribution, but we feel it is important to also send this from MDHHS.

We are happy to discuss this with Ron Fonger if you want him to be the first press call we make once we issue it.

Subject: FW: FOR IMMEDIATE RELEASE: Water filters available for MDHHS clients, all Flint residents beginning Tuesday

Importance: High

Greetings, Charlie –

Good talking with you earlier today. We're happy to help connect you with state experts and resources as possible.

You had asked about filters. Two components of the state's action plan announced this past Friday will be mobilized tomorrow with free filters available for all DHHS clients in the area as well as any other Flint resident. (See details below).

I'm looping in the two folks here – both at the MI Dept of Health & Human Services – who can work with you and your team on securing an interview with one of the DHHS leads on the ground as well as securing footage as possible. (Just have to work through some privacy and confidentiality rules re: clients).

Angela and Bob – per our conversation, Charlie is a producer for CBS Evening News with a team in Flint today and tomorrow. They were looking for opportunities like this. Please work with him to make arrangements and see what's feasible and workable.

Thanks all,
SW

Water filters available for MDHHS clients, all Flint residents beginning Tuesday

LANSING, Mich. – Free water filters will be available to current Michigan Department of Health and Human Services clients and Flint residents at four locations beginning Tuesday, October 6, at 9 a.m. through a partnership between the MDHHS and the Genesee County Community Action Resource Department. Free National Sanitation Foundation certified water filters are being provided to Flint residents as part of the administration's comprehensive approach to addressing water concerns in the area.

Current MDHHS clients are encouraged to visit either the 125 E. Union St. or 4809 Clio Road MDHHS office location to obtain a free, certified home water filter. Residents who are not currently enrolled in MDHHS assistance programs should visit the Genesee County Community Action Resource Department offices located at 2727 Lippincott and 601 North Saginaw in Flint. Staff will be onsite at all four locations from 9 a.m. to 4 p.m., Monday through Friday, to distribute filters and assist residents who have questions about proper installation.

"Ensuring that families in the Flint area have access to resources that will help reduce the potential for lead exposure is our top priority," said Nick Lyon, director of the MDHHS. "I want to thank our partners who have mobilized to make water filters available – a point that highlights the importance of continued collaboration at the local, state and federal level as we move forward."

MDHHS clients in the city of Flint who are active Family Independence Program (FIP), Food Assistance Program (FAP), Child Development and Care (CDC), State Disability Assistance (SDA), or Social Security Insurance (SSI) recipients should bring valid identification and a copy of their water bill to their local MDHHS office to receive their filter free of charge. Flint residents who are not active MDHHS clients should bring identification and their water bill to the GCCARD location.

Although blood lead levels throughout the city of Flint have remained steady, last week, MDHHS data was found to be consistent with a recent Hurley Children's Hospital study indicating increased blood lead levels in children residing in two Flint ZIP codes after a 2014 change in water source. While lead paint remains the number one cause of lead poisoning in Michigan, the recent data

prompted MDHHS to take action to reduce potential lead exposures through water sources.

MDHHS is urging parents in Flint and throughout the state to do their part in preventing elevated blood lead levels in children. For more information about steps you can take now, visit www.michigan.gov/lead, or contact your local health department. For updates on Flint water and available resources, visit www.michigang.gov/flintwater.

Sigh. Here's what I say in response to that …

The Governor and our Administration are deeply committed to building solid and strong communities and a Michigan that works for everyone – regardless of an area's makeup or socioeconomic status. That certainly includes Flint.

Would hope some of our past work and collaboration specifically in the city of Flint can help demonstrate that clearly, from the Secure Cities public safety initiative and targeted resources to help the city tackle that issue as well as infrastructure needs to continued, ongoing dialogue on so many issues with community, faith and business leaders and residents. We are committed to partnering with the city of Flint and collaborating across local, state and federal levels to bring all resources and ideas to bear.

Sorry, Ron, I can't see any of the text below after "WJRT is reporting" … other than "water crisis." What's the Q?

Though you know the state team will start today its distribution of water filters at both DHHS offices for state assistance clients and through GCARD offices for any other Flint resident, yes?

Subject: RE: Flint

Agreed overall, though ideally it would have been a week or two ago before the fever pitch level it is now. But we need to do something more to change the narrative and demontrate state's leadership and determination to help tackle the issue.

Key challenge is what specifically tied to kind of venue/announcement/info given the dynamics and timing (ie. school testing results) and status of DWSD reconnect conversation. Or a way to convey some other tangible item/assistance.

These filter distribution sites announced yesterday and that Beth highlighted below could be good one - it's a state led effort with collaboration - just would have to be done carefully.

We also have the state lab where testing is done. Though that poses certain opportunities and risks too, including it's not in Flint (is in Lansing).

I think this is a good idea. One think we keep hearing is that the governor is not involved or is detached. The Mike Thompson cartoon in the Freep last week is getting a lot of mileage on social media.

This would be good to show he's there and cares. And if we don't announce until he's there we can avoid the protests -- and still get the optics.

Very helpful. Thx much.

What is anticipated cost of filter cartridge replacement?

Also, we're needing to send the Governor daily updates for his briefing on this issue. Would be great to have recap of today's first distribution by 4 p.m. -- how went, how many given out/clients served, overall reax/reception, etc. And anything else of note that's important or key.

Greetings, Stephanie –

My understanding is that plan is to also offer and provide filter replacements when needed. Team is tracking type of filter and contact information to help ensure.

Having Jennifer Eisner from the MI Dept of Health & Human Services get in touch with you asap to confirm and walk through details. Just in case, she's at 517-230-9804.

Importance: High

- Reviewing my notes, I'm not sure I got a definitive answer from Wyant about corrosion control at the Flint water treatment plant.
  Was corrosion control in use? I'd like a simple yes or no, here – if no, obviously, why not – if yes, what was it, and why was – if any – what sounds like a lesser degree of corrosion control being used? I would like the names of the specific technologies/chemicals that were in use in the past, if in fact corrosion control was being used at the Flint plant, and the specific technologies that will be used going forward.
- Was the MDEQ unaware that there were aging lead service lines in Flint, and that those would increase the lead risk? Were the Flint water treatment folks? Why was this not taken into account in developing the water treatment plan?
- Wyant said that "two consecutive back to back tests" showed there was a problem; when were those tests performed and when were the results available?

Obviously I would like to use this information in a piece we'll have ready to go at 1:30p so ASAP would be great.

>
> The Flint Drinking Water Action Plan was announced on October 2, 2015. It included the following:
>
> - Testing in Flint public schools immediately
> - Offered free water testing to Flint residents
> - Provided free water filters to residents with concerns or who are included in state assistance programs
> - Expanding health exposure testing of individual homes
> - Accelerating corrosion controls in the Flint drinking water system
> - Accelerating water system improvements to address replacing lead service lines
> - Expediting the completion of the Karegnondi Water Authority pipeline
> - Expanding a Safe Drinking Water Technical Advisory Committee
> - Named Dr. Eden Wells as the Flint drinking water public health advisor
> - Boosted a comprehensive lead education program
>
> Testing in Flint Public Schools Immediately

Samples were taken on October 2 and were received at DEQ laboratory over the weekend. Test results to date indicate 37 samples tested, 4 of which exceeded a federal action level, and 1 of those 4 was a significant outlier. We will be compiling detailed information about which schools and area codes the test results came from and will be providing that information in our next update.

We have met with DHHS, and we are working on developing response protocols, a communications plan, and guidance for schools when this data is reported.

Offered Free Water Testing to Flint Residents

We have received 4 sets of samples from Flint that represent individual residents. We will be compiling the total number and the results of those samples and reporting in a future report.

Provided Free Water Filters to Residents with Concerns or Who are Included in State Assistance Programs

DHHS held organizational meetings in Flint on October 5, and filter distribution by DHHS started on October 6. Nick Lyon in DHHS is taking the lead in filter distribution.

Expanding Health Exposure Testing of Individual Homes

Dr. Wells and Dan Wyant have been in conversations about a protocol for exposure testing. Dr. Wells will take the lead on developing the protocol.

Accelerating Corrosion Controls in the Flint Drinking Water System

A conference call was held with U.S. EPA Regional Administrator Susan Hedman and national corrosion control experts. We asked two questions:

1. **Which is a safer water source – DWSD or Flint River?**
2. **If you don't have an opinion on the safer source, what criteria should we use for an evaluation?**

EPA staff would not commit to a preference, but their evaluation of the criteria clearly lead to the conclusion that DWSD was a safer water source. EPA committed to submitting technical assistance to the Safe Drinking Water Technical Advisory Committee (Advisory Committee) meeting, which will be held on October 7 at 2:00 p.m. in Flint City Hall.

DEQ met with the Flint Mayor, the city manager, and their water staff. Flint agreed to expediting corrosion controls. We discussed the agenda for the Advisory Committee meeting. The Advisory Committee will be asked to evaluate two respective water sources at their Wednesday meeting.

We expect the Advisory Committee to recommend the water source that would address not only lead safety but also other water safety issues.

Accelerating Water System Improvements to Address Replacing Lead Service Lines

Conversations with Congressman Kildee and EPA have clarified the state would be allowed to use Drinking Water Revolving Loan funds to replace private drinking water service lines. Senator Ananich has been approached to introduce language clarifying the state's authority.

Expediting the Completion of the Karegnondi Water Authority Pipeline

Dan Wyant has talked to Genesee County Drain Commissioner Jeff Wright. Mr. Wright has provided a list of issues that would help expedite the completion of the Karegnondi Water Authority pipeline. They include truck weight and frost law exemptions, talent identification, and expediting permits.

Expanding a Safe Drinking Water Technical Advisory Committee

EPA has appointed their national technical expert to the Advisory Committee, and we have appointed Alfred Franzblau, M.D., Professor of Environmental Health Services, University of Michigan, to the Advisory Committee.

Named Dr. Eden Wells as the Flint Drinking Water Public Health Advisor

Boosted a Comprehensive Lead Education Program

Other Updates

- Dan Wyant was interviewed on October 6 by CBS Evening News during filter distribution in Flint. Questions asked were:
  - Was it a mistake to go to Flint River water?
    Answer: We draw water from the surface waters; we treat it to safe drinking water standards. At issue is lead exposure. Lead exposure must be addressed. Actions are being taken to address the issue.
  - Did you put kids at risk?
    Answer: Lead exposure is a serious issue, and steps need to be taken to limit lead exposure.
  - Why did it take so long?
    Answer: DEQ has been there from the beginning addressing the issue of Flint water. Recent tests justify and require the actions taken. Action steps address short-term, intermediate, and long-term lead issues to ensure public safety and confidence of the drinking water.

- Dan Wyant also spoke to the Governor about Flint funding needs. A meeting is scheduled for October 7 at 8:00 a.m. to further discuss proposals.

- What we are telling Flint citizens is:
  - Have your water tested
  - Use only cold water for drinking, cooking, and preparing formula
  - Run water before use if it has not been used for several hours
  - Obtain a water filter approved for lead removal
  - Purchase lead-free plumbing components
  - Remove entire lead service lines

Via Certified Mail and Electronic Delivery

Ms. Inez M. Brown
City Clerk
City of Flint
2nd Floor, City Hall
1101 S. Saginaw Street
Flint, Michigan 48502

Dear Ms. Brown:

Regarding: Termination of Contract for the Provision of Water Services by the City of Detroit, Water and Sewerage Department

On December 20, 1965, the City of Detroit, through its Board of Water Commissioners, (DWSD) and the City of Flint, Michigan (Flint) entered into a contract for the provision of DWSD treated water to Flint and the distribution by flint of that water to other Genesee County communities. Section 18 of that Agreement[1] provides:

18. The Board [DWSD] shall supply and sell water to the City [Flint] from the water system of the City of Detroit, and the City shall receive and purchase such water in accordance with the terms of this Agreement for an indefinite period of time but at least for a period of thirty-five (35) years from the date hereof. This Agreement may be terminated by either party after expiration of said 35-year period, upon one year's written notice served upon the other party by delivering the same to the Secretary of the Board or to the Clerk of the City as the case may be, or at any time upon mutual consent of both parties.

Please take notice that pursuant to this section, 18, of the above-referenced Agreement, DWSD is terminating this Agreement one year from today's date (April 17, 2014).

Sincerely yours,

Sue F. McCormick
Director

[1] Although the Agreement between DWSD has been subsequently amended, Section 18 remains unchanged and in full effect.

To: Wurfel, Sara (GOV) <Wurfels@michigan.gov>
Cc: Shekter Smith, Liane (DEQ) <SHEKTERL@michigan.gov>
Subject: RE: two questions from Gov

Liane, please correct me if I've got this wrong …

In short, I believe the answer I'm going to be able to confirm yet today is that the schools have never been tested.

There is no requirement in statute for the testing of schools for lead or copper if they're using the municipal service as their supply (statute presumes they are covered same as homes by the surveillance monitoring done on households).

If the school is on its own well, it undergoes testing as a sole source.

Harvey, Attached are various documents and press reports of the City Council`s vote in March 2013 to join KWA. We have not located the actual resolution and it is not on the City`s website. It is interesting that the only no vote explained he wanted to just use Flint River water. Wayne

Kathryn –

Please see below.

This is proposed media advisory that sounds like we can shoot out at any time after conclusion of Technical Advisory meeting from today. Please review and make sure you and Mott team are all good with it.

We'd like to get out ASAP. We won't be confirming any details on either background or on or off the record to ensure all final pieces can come together between now and tomorrow morning.

Thanks so much and talk soon,
SW

Hi there John -

What I'd say is that this is an option we're helping thoroughly review and consider with the city, and the technical advisory committee's work is much appreciated in this matter. We're also focused on working hard in collaboration with all and implementing the key action steps outlined on Oct. 2 to help protect public health and ensure safe, accessible drinking water for Flint residents.

We have slated a time tomorrow morning for the Governor and administration with city and community leaders to provide an update overall on Flint water so hoping you got those details. (Just let me know if you did not).

Thanks and best,
SW

Sara and Brad:
You may have seen that the technical advisory committee today recommended that Flint reconnect to Detroit's water system.
Walling claims that will cost $12 million over nine months. He's asking the governor in the legislature to come up with the money.
Can we get a comment from the governor ASAP?
I'd appreciate it.

Hello. This is Mark Hicks, a reporter at The Detroit News. I am trying to reach representatives for Gov. Snyder's office tonight regarding a recommendation from a committee of experts on Wednesday to reconnect Flint to Detroit's water system to improve the drinking water quality. Has the governor's office received this recommendation, and does it impact the announcement tomorrow regarding Flint's water system?

Please feel free to let me know if you or another representative can reach me before 8:30 p.m. EST tonight for a brief phone interview or statement regarding this recommendation. I realize this is late and short notice after-hours, and some information might not be immediately accessible, but any help provided will be greatly appreciated and better inform our readers. Thank you for your time.

Subject: FW: Draft run of show and release

Importance: High

Greetings Mayor and Jason –

Here is proposed run of show for tomorrow, along with the draft release. Again, per earlier conversations, highly confidential and not for sharing as dependent on final details getting worked out at tomorrow's 9 a.m. meeting.

On the release, please note in particular the placeholder for the Mayor's quote.

Please review and let us know of any edits or concerns you may have. We look forward to your feedback. If there's a chance you can get us the quote sometime yet this evening, that'd be fantastic.

Also, we'd like to put a city media contact here as well. Assuming that's Jason. Just wanted to verify which contact info should we use?

Thanks again. Glad to be working and collaborating with the city on this very challenging issue.

Best regards,
SW

Run of show & comment topics below:

9:45 AM – 10:00 AM Pre-Brief with all speakers
10:00 AM – 10:01 AM Harvey Hollins kicks off press conference; introduces Governor
10:01 AM – 10:05 AM Governor gives remarks
10:05 AM – 10:06 AM Harvey Hollins introduces Mayor Dayne Walling
10:06 AM – 10:10 AM Mayor Walling gives remarks
10:10 AM – 10:11 AM Harvey Hollins introduces DEQ Director Dan Wyant
10:11 AM – 10:15 AM Director Wyant gives remarks
10:15 AM – 10:16 AM Harvey Hollins introduces DHHS Director Nick Lyon
10:16 AM – 10:17 AM Director Nick Lyon introduces Dr. Eden Wells
10:17 AM – 10:20 AM Dr. Eden Wells remarks
10:20 AM – 10:21 AM Harvey Hollins introduces Ridgway White of Mott Foundation
10:21 AM – 10:25 AM Ridgway White gives remarks
10:25 AM – 10:35 AM Q&A from the podium
10:35 AM Event concludes; Governor departs

Nature of comments:

Mayor Walling – Importance of solution to Flint
Dan Wyant – Overview of steps on transition from Flint River to DWSD, school testing results
Nick Lyon – DHHS involvement
Dr. Eden Wells – Testing of water going forward, use of filters approved by NSF
Ridgway White – Importance of collaboration/commitment to Flint

Release:

Gov. Rick Snyder: Move back to Detroit water provides best protection for public health in Flint

State, Mott Foundation and city form partnership to fund switch

FLINT, Mich. – Flint families and children will be better protected by reconnecting with the Great Lakes Water Authority as the source of the city's drinking water, Gov. Rick Snyder said.

Snyder said Thursday that he will request the state Legislature to provide half, or $6 million, of the $12 million needed to reconnect with the authority. The Flint city government will provide $2 million and the Charles Stewart Mott Foundation will donate $4 million.

"All Flint residents need clean, safe drinking water," Snyder said. "The technical experts helping the city on its water advisory all agree this move back to the Great Lakes Water Authority provides the best public health protection for children and families. This effort today is the result of people coming together to solve a problem. I appreciate Detroit's willingness to reconnect with Flint, the Mott Foundation's generous donation, and the dedication of all parties to come together to protect Flint families and children."

The Michigan Departments of Environmental Quality and Health and Human Services today also committed an additional $3.5 million for water filters, free lead testing through the state laboratory for Flint water customers, and hiring additional staff to conduct health exposure monitoring for lead in drinking water.

Flint city leaders requested the state's help to fund the reconnection after a Wednesday meeting of Flint's Technical Advisory Committee. Flint's move to the Great Lakes Water Authority is expected to cost about $1.3 million per month until the Karegnondi Water Authority is completed next summer.

INSERT MAYOR QUOTE HERE

The move to Detroit water, which is drawn from Lake Huron, carries many public health benefits. As large bodies of water, the Great Lakes are naturally prone to fewer problems from large rain events and other runoff issues that can be present in shallower rivers. Additionally, the Great Lakes Water Authority has already fully optimized its corrosion control, using phosphates to help coat the insides of pipes and prevent lead from leaching into the water.

However, reconnecting with the authority will not completely resolve the city's problem with lead service lines or aging infrastructure. It will take time for pipes in Flint to become coated with the phosphate corrosion control. Additionally, some households in the city could experience lead in their drinking water until all lead pipes and plumbing are replaced.

INSERT MOTT FOUNDATION QUOTE HERE

To best protect public health, Snyder said state and local authorities will continue to carry out steps outlined on Oct. 2 in a comprehensive action plan, including continued testing, the use of faucet filters and providing residents with accurate information about steps to eliminate lead exposure.

Free filters are available for current MDHHS clients at the 125 E. Union St. or 4809 Clio Road MDHHS office locations. For residents who are not currently enrolled in MDHHS assistance programs, free filters are available at the Genesee County Community Action Resource Department offices at 2727 Lippincott and 601 North Saginaw in Flint. Staff will be at all four locations from 9 a.m. to 4 p.m., Monday through Friday, to distribute filters and assist residents who have questions about proper installation. At the Lippincott location

only, extended hours will be offered this weekend, including until 7 p.m. on Thursday and Friday and from 10 a.m. to 2 p.m. on Saturday.

Other good practices for residents concerned about lead include turning on the cold water tap and running the water until it's as cold as it will go. Additionally, only use cold water for cooking, drinking and especially mixing baby formula.

School test results released; more investigation planned

The state today also released the first results from its lead screening program in schools and homes. Of 37 total samples taken at 13 buildings, four samples spread over three buildings exceeded the federal action level of 15 parts per billion.

However, this sampling provides only an initial screen, and the state is committing to further testing water and inspecting plumbing at these schools. Until testing is complete, schools are advised to continue using bottled water and filtration as a precaution to protect children.

In addition, free testing is still available for any other Flint school, including daycares and Head Starts. Free testing is also available for any Flint resident.

Additional information, including more detailed lead screening results, is available at www.michigan.gov/flintwater.

Has the governor's office received this recommendation, and does it impact the announcement tomorrow regarding Flint's water system?

Please feel free to let me know if you or another representative can reach me before 8:30 p.m. EST tonight for a brief phone interview or statement regarding this recommendation. I realize this is late and short notice after-hours, and

some information might not be immediately accessible, but any help provided will be greatly appreciated and better inform our readers. Thank you for your time.

Subject: FW: Updated news release

Importance: High

Greetings Kathryn –

Per our conversation just a bit ago, below is latest version of release that works to incorporate and marry all of yours and the city's comments, along with others. Believe we got most addressed.

We opted to keep a few things for flow.

Please review and make sure all good from your end.

We can do any final, major tweaks in the morning.

Also, here are a couple of pieces from DWSD/GLWA that show how the system pulls its water from both Lake Huron AND the Detroit River.

Water 101/Q&A about Water Treatment - http://www.dwsd.org/pages_n/water101.html
Q: What is the source my drinking water?
A: The Detroit Water and Sewerage Department gets all of its water from the Detroit River and Lake Huron.

Detroit Water & Sewerage Dept Fact Sheet --
http://www.dwsd.org/downloads_n/about_dwsd/fact_sheet/dwsd_fact_sheet.pdf
The water system draws fresh water from the Great Lakes System, with Lake Huron to the north and the Detroit River to the south.

Holler if anything else needed at all between now and tomorrow morning. See you soon and thanks for all your help!

SW

Gov. Rick Snyder: Move back to Detroit water provides best protection for public health in Flint

State, Mott Foundation, city form partnership to fund switch until KWA is ready

FLINT, Mich. – Flint families and children will be better protected by reconnecting with the Great Lakes Water Authority as the source of the city's drinking water until the Karegnondi Water Authority pipeline is completed, Gov. Rick Snyder said.

Snyder said Thursday that he will request the state Legislature to provide half, or $6 million, of the $12 million needed to reconnect with the authority through next summer, when the KWA is expected to be completed.

The Flint city government will provide $2 million and the Charles Stewart Mott Foundation has committed $4 million.

“All Flint residents need clean, safe drinking water,” Snyder said. “The technical experts helping the city on its water advisory all agree this move back to the Great Lakes Water Authority provides the best public health protection for children and families. This effort today is the result of people coming together to solve a problem. I appreciate Detroit’s willingness to reconnect with Flint, the Mott Foundation’s generous commitment, and the dedication of all parties to come together to protect Flint families and children.”

Flint city leaders requested the state’s help to fund the reconnection and to assist with health and infrastructure issues. Flint’s move to the Great Lakes Water Authority is expected to cost about $1.3 million per month until the Karegnondi Water Authority is completed next summer.

“It’s heartening to know so many people are working at so many levels to bring safe, clean water back to Flint,” Mott Foundation President Ridgway White said. “We believe that reconnecting the city’s water supply to Lake Huron is the right and necessary thing to do, and we’re glad we could help the state and the city make it happen.”

The move to Detroit water is expected to carry public health benefits. As large bodies of water, the Great Lakes are naturally prone to fewer problems from large rain events and other runoff issues that can sometimes be present in shallower rivers. Additionally, the Great Lakes Water Authority water already has additional corrosion control, using phosphates to help coat the insides of pipes and limit lead from leaching into the water.

However, reconnecting with the authority will not completely resolve the city’s problem with lead service lines or aging infrastructure. It will take time for pipes in Flint to become coated with the phosphate corrosion control. Additionally, some households in the city could experience lead in their drinking water until all lead pipes and plumbing are replaced.

"Reconnecting to Detroit is the fastest way to deliver clean, safe water to Flint and stabilize the infrastructure system,” Flint Mayor Dayne Walling said. “I appreciate the state, the Mott Foundation, Detroit, and the county's participation in a solution for Flint's water problems. The health and safety of Flint's families, children and seniors is my top priority and reconnecting to Detroit is a major step that the city could not take alone given budget constraints."

To best protect public health, Snyder said state and local authorities will continue to carry out steps outlined on Oct. 2 in a comprehensive action plan, including continued testing, the use of faucet filters and providing residents with accurate information about steps to eliminate lead exposure. The Michigan Departments of Environmental Quality and Health and Human Services today also committed an additional $3.5 million for water filters, free lead testing through the state laboratory for Flint water customers, and hiring additional staff to conduct health exposure monitoring for lead in drinking water.

Free filters are available for current MDHHS clients at the 125 E. Union St. or 4809 Clio Road MDHHS office locations. For residents who are not currently enrolled in MDHHS assistance programs, free filters are available at the Genesee County Community Action Resource Department offices at 2727 Lippincott and 601 North Saginaw in Flint. Staff will be at all four locations from 9 a.m. to 4 p.m., Monday through Friday, to distribute filters and assist residents who have questions about proper installation. At the Lippincott location

only, extended hours will be offered this weekend, including until 7 p.m. on Thursday and Friday and from 10 a.m. to 2 p.m. on Saturday.

Other good practices for residents concerned about lead include turning on the cold water tap and running the water until it's as cold as it will go. Additionally, only use cold water for cooking, drinking and especially mixing baby formula.

School test results released; more investigation planned

The state today also released the first results from its lead screening program in schools and homes. Of 37 total samples taken at 13 buildings, four samples spread over three buildings exceeded the federal action level of 15 parts per billion.

However, this sampling provides only an initial screen, and the state is committing to further testing water and inspecting plumbing at these schools. Until testing is complete, schools are advised to continue using bottled water and filtration as a precaution to protect children.

In addition, free testing is still available for any other Flint school, including daycares and Head Starts. Free testing is also available for any Flint resident.

Additional information, including more detailed lead screening results, is available at www.michigan.gov/flintwater.

> Greetings Mayor and Jason –

Here is proposed run of show for tomorrow, along with the draft release. Again, per earlier conversations, highly confidential and not for sharing as dependent on final details getting worked out at tomorrow's 9 a.m. meeting.

On the release, please note in particular the placeholder for the Mayor's quote.

Please review and let us know of any edits or concerns you may have. We look forward to your feedback. If there's a chance you can get us the quote sometime yet this evening, that'd be fantastic.

Also, we'd like to put a city media contact here as well. Assuming that's Jason. Just wanted to verify which contact info should we use?

Thanks again. Glad to be working and collaborating with the city on this very challenging issue.

Best regards,

SW

Release:

Gov. Rick Snyder: Move back to Detroit water provides best protection for public health in Flint

State, Mott Foundation and city form partnership to fund switch

FLINT, Mich. – Flint families and children will be better protected by reconnecting with the Great Lakes Water Authority as the source of the city's drinking water, Gov. Rick Snyder said.

Snyder said Thursday that he will request the state Legislature to provide half, or $6 million, of the $12 million needed to reconnect with the authority. The Flint city government will provide $2 million and the Charles Stewart Mott Foundation will donate $4 million.

"All Flint residents need clean, safe drinking water," Snyder said. "The technical experts helping the city on its water advisory all agree this move back to the Great Lakes Water Authority provides the best public health protection for children and families. This effort today is the result of people coming together to solve a problem. I appreciate Detroit's willingness to reconnect with Flint, the Mott Foundation's generous donation, and the dedication of all parties to come together to protect Flint families and children."

The Michigan Departments of Environmental Quality and Health and Human Services today also committed an additional $3.5 million for water filters, free lead testing through the state laboratory for Flint water customers, and hiring additional staff to conduct health exposure monitoring for lead in drinking water.

Flint city leaders requested the state's help to fund the reconnection after a Wednesday meeting of Flint's Technical Advisory Committee. Flint's move to the Great Lakes Water Authority is expected to cost about $1.3 million per month until the Karegnondi Water Authority is completed next summer.

INSERT MAYOR QUOTE HERE

The move to Detroit water, which is drawn from Lake Huron, carries many public health benefits. As large bodies of water, the Great Lakes are naturally prone to fewer problems from large rain events and other runoff issues that can be present in shallower rivers. Additionally, the Great Lakes Water Authority has already fully optimized its corrosion control, using phosphates to help coat the insides of pipes and prevent lead from leaching into the water.

However, reconnecting with the authority will not completely resolve the city's problem with lead service lines or aging infrastructure. It will take time for pipes in Flint to become coated with the phosphate corrosion control. Additionally, some households in the city could experience lead in their drinking water until all lead pipes and plumbing are replaced.

INSERT MOTT FOUNDATION QUOTE HERE

To best protect public health, Snyder said state and local authorities will continue to carry out steps outlined on Oct. 2 in a comprehensive action plan, including continued testing, the use of faucet filters and providing residents with accurate information about steps to eliminate lead exposure.

Free filters are available for current MDHHS clients at the 125 E. Union St. or 4809 Clio Road MDHHS office locations. For residents who are not currently enrolled in MDHHS assistance programs, free filters are available at the Genesee County Community Action Resource Department offices at 2727 Lippincott and 601 North Saginaw in Flint. Staff will be at all four locations from 9 a.m. to 4 p.m., Monday through Friday, to distribute filters and assist residents who have questions about proper installation. At the Lippincott location only, extended hours will be offered this weekend, including until 7 p.m. on Thursday and Friday and from 10 a.m. to 2 p.m. on Saturday.

Other good practices for residents concerned about lead include turning on the cold water tap and running the water until it's as cold as it will go. Additionally, only use cold water for cooking, drinking and especially mixing baby formula.

School test results released; more investigation planned

The state today also released the first results from its lead screening program in schools and homes. Of 37 total samples taken at 13 buildings, four samples spread over three buildings exceeded the federal action level of 15 parts per billion.

However, this sampling provides only an initial screen, and the state is committing to further testing water and inspecting plumbing at these schools. Until testing is complete, schools are advised to continue using bottled water and filtration as a precaution to protect children.

In addition, free testing is still available for any other Flint school, including daycares and Head Starts. Free testing is also available for any Flint resident.

Additional information, including more detailed lead screening results, is available at www.michigan.gov/flintwater.

Gov. Rick Snyder: Move back to Detroit water provides best protection for public health in Flint

State, city, Mott Foundation, join to fund switch until KWA is ready

FLINT, Mich. – Flint families and children will be better protected by reconnecting with the Great Lakes Water Authority as the source of the city's drinking water until the Karegnondi Water Authority pipeline is completed, Gov. Rick Snyder said.

Snyder said Thursday that he will request the state Legislature to provide half, or $6 million, of the $12 million needed to reconnect with the authority through next summer, when the KWA is expected to be completed. The Flint city government will provide $2 million and the Charles Stewart Mott Foundation has committed $4 million.

"All Flint residents need clean, safe drinking water," Snyder said. "The technical experts helping the city on its water advisory all agree this move back to the Great Lakes Water Authority provides the best public health protection for children and families. This effort today is the result of people coming together to solve a problem.

I appreciate Detroit's willingness to reconnect with Flint, the Mott Foundation's generous commitment, and the dedication of all parties to come together to protect Flint families and children."

Flint city leaders requested the state's help to fund the reconnection and to assist with health and infrastructure issues. Flint's move to the Great Lakes Water Authority is expected to cost about $1.3 million per month until the Karegnondi Water Authority is completed next summer.

"It's heartening to know so many people are working at so many levels to bring safe, clean water back to Flint," Mott Foundation President Ridgway White said. "We believe this transitional solution is the right and necessary thing to do, and we're glad we could help the state and the city make it happen."

The move to Detroit water, which is expected to carry, carries many public health benefits. As large bodies of water, the Great Lakes are naturally prone to fewer problems from large rain events and other runoff issues that can sometimes be present in shallower rivers. Additionally, the Great Lakes Water Authority water already has additional corrosion control, using phosphates to help coat the insides of pipes and limit lead from leaching into the water.

However, reconnecting with the authority will not completely resolve the city's problem with lead service lines or aging infrastructure. It will take time for pipes in Flint to become coated with the phosphate corrosion control. Additionally, some households in the city could experience lead in their drinking water until all lead pipes and plumbing are replaced.

"Reconnecting to Detroit is the fastest way to deliver clean, safe water to Flint and stabilize the infrastructure system," Flint Mayor Dayne Walling said. "I appreciate the state, the Mott Foundation, Detroit, and the county's participation in a solution for Flint's water problems. The health and safety of Flint's families, children and seniors is my top priority, and reconnecting to Detroit is a major step that the city could not take alone given budget constraints."

To best protect public health, Snyder said state and local authorities will continue to carry out steps outlined on Oct. 2 in a comprehensive action plan, including continued testing, the use of faucet filters and providing residents with accurate information about steps to eliminate lead exposure. The Michigan Departments of Environmental Quality and Health and Human Services today also committed an additional $3.5 million for water filters, free lead testing through the state laboratory for Flint water customers, and hiring additional staff to conduct health exposure monitoring for lead in drinking water.

Free filters are available for current MDHHS clients at the 125 E. Union St. or 4809 Clio Road MDHHS office locations. For residents who are not currently enrolled in MDHHS assistance programs, free filters are available at the Genesee County Community Action Resource Department offices at 2727 Lippincott and 601 North Saginaw in Flint. Staff will be at all four locations from 9 a.m. to 4 p.m., Monday through Friday, to distribute filters and assist residents who have questions about proper installation. At the Lippincott location only, extended hours will be offered this weekend, including until 7 p.m. on Thursday and Friday and from 10 a.m. to 2 p.m. on Saturday.

Other good practices for residents concerned about lead include turning on the cold water tap and running the water until it's as cold as it will go. Additionally, only use cold water for cooking, drinking and especially mixing baby formula.

School test results released; more investigation planned

The state today also released the first results from its lead screening program in schools and homes. Of 37 total samples taken at 13 buildings, four samples spread over three buildings exceeded the federal action level of 15 parts per billion.

However, this sampling provides only an initial screen, and the state is committing to further testing water and inspecting plumbing at these schools. Until testing is complete, schools are advised to continue using bottled water and filtration as a precaution to protect children.

In addition, free testing is still available for any other Flint school, including daycares and Head Starts. Free testing is also available for any Flint resident.

Subject: Update from Nick's calls

Nick has put in calls to our subcommittee chairs and wanted to pass along the feedback he got.

All agree from the health side that the DHHS action is the right way to move forward. However they had some negative feedback on the $6 million.

--Representatives MacGregor and Poleski both feel this should be a loan to the City of Flint instead of direct payment of $6 million

--Senator Marleau complained about the lack of legislative input before the decision was made to switch back to Flint water from Detroit in the first place.

He left messages for Verheulen, Santana, Shirkey and Hertel.

Greetings, Rona --

Just got back from Flint. Various versions of this Q came up during today's presser. I would recommend you take a listen. http://www.michigan.gov/snyder/0,4668,7-277-60112-268720--,00.html

State was following all nationally set standards and protocols for testing, and has some of the most dedicated and professional drinking water and public health experts in the country working off the best information available at the time. We have acted quickly and took detailed concrete actions steps as new information and data came in.

Subject: Looking for comment

WWJ's Zahra Huber spoke with Professor Marc Edwards from Virginia Tech regarding his thoughts on the Flint Water situation as the lead researcher on the project and he had very harsh words about how the Flint Water situation had been handled. He said federal laws had been broken when the switch was made away from the Detroit River to the Flint River and that data was manipulated to show that Flint water was safe when it was not. Can we get a comment from the Governor on this interview? I've attached the audio, uncut, for you to listen to for comment.

Let us know. Thanks!

Serena –

Our teams tells me and your gmail address were indeed on our distribution list and that the message was delivered – wondering if it was a potential spam folder problem. Just in case, they tried taking you off and then putting you back on. If you still have any problems, pls let me know and we can call the vendor.

Thx much,
SW

Subject: Flint water press release?

Morning,

I'm having connectivity issues with listening to the livestream regarding Flint water. Is there a press release you can send my way? Working on a story now for Reuters.

Also, I appear to not be getting press releases from the Governor's office. Can I please be added again?

Thanks,
Serena Maria Daniels

Hi there Jonathan,

Sorry for delay. Been in back-to-back meetings since getting back from Flint.

Happy to walk you through this, but sounds like Kurt already did? Just let me know.

Thanks much,
SW

Hi Sara and Dave

Is the governor asking for a total of $6 million from the Legislature (for water switch) or $10 million (plus other action plan costs)? I was a little confused by descriptions in press conference and release.

Subject: RE: Snyder plan for Flint water

Hi there Gary –

What I'd say is that … in combination with the other short term, intermediate term and long-term steps outlined last week, this move represents a big step forward and demonstrates the Governor and Administration's deep commitment to protecting public health and ensuring safe, accessible water. We're focused on helping address this challenging issue for the residents of Flint, partnering with the city and collaborating across local, state and federal levels to bring all resources and ideas to bear.

Hope that helps.

Thanks and best,
SW

Sara,
I am working on a follow-up story to today's Flint water announcement and I was hoping you could help me out. I am focusing on what comes next for the people of Flint. I was wondering if the governor's office would comment on what needs to be done to get residents to trust their water system and elected leaders again.

My deadline is noon Friday.

Thanks for the assistance.

Rep. Phelps Files Suit Against State of Michigan, City of Flint

State, city failed to release documents sought in FOIA request

LANSING — State Representative **Phil Phelps** (D-Flushing) announced earlier today that he is filing suit against the state of Michigan and the city of Flint to force them to release public documents he requested last month under the Freedom of Information Act (FOIA).

"It's an absolute shame that I have to file suit to force our government to comply with the law," Phelps said. "I was shocked at their response, because prior to receiving the denials, officials from both the city and state had told me that not only did documents exist, but they would be happy to share them with me."

On Sept. 4 of this year, Phelps requested that the city and state turn over all documents and emails regarding the permit and application process that Flint's emergency manager was required to complete before the Michigan Department of Environmental Quality gave the go ahead to the city to start using the Flint River as its source of drinking water. Late last month, the state and the city both denied Phelps' request, saying that no such documents exist.

In March and April of 2014, officials from both the city and state were also quoted in several articles on Mlive.com, making comments about the permit application process for Flint to switch its source of drinking water from Detroit's system to the Flint River.

"I want to know what these officials knew about the safety and quality of the river water before the switch was made. Judging by their response and recent actions, it almost seems they knew a lot more than they are letting on to," Phelps said. "Flint residents deserve better than this, they deserve to know the truth about the decisions that were made, and if I have to fight this in court to get the truth, so be it."

VERIFIED FREEDOM OF INFORMATION ACT COMPLAINT

There is no other pending or resolved civil action arising out of the transaction or occurrence alleged in the Complaint against Defendant.

Keith D. Flynn

Plaintiff **PHIL PHELPS**, ("Plaintiff"), by and through his attorneys, **MILLER COHEN, P.L.C.**, for his Freedom of Information Act Complaint, states as follows:

Since Spring 2014, families in the City of Flint have been exposed to a significant threat to their health and well-being caused by the decision to switch the City's water supply from Lake Huron water to Flint River water. This decision was made by the State's appointed Emergency Manager in the name of saving money. In the process, the health and welfare of Flint residents has been carelessly jeopardized with thousands of residents being exposed to contaminants, including E.coli, disinfectant byproduct, and, most recently, lead.

This threat is the very reason why the Michigan Department of Environmental Quality (DEQ) exists—to protect the public by insisting upon compliance with federal and state environmental regulations. The DEQ is supposed to work with suppliers of water, such as the City of Flint, and approve or reject applications for permits to alter existing water systems, including changes that are made to the source of water. MCL § 325.1004(6). Part of this process requires localities to provide the DEQ with detailed technical information evaluating any impact that proposed alterations might have on the quality of water provided to the public. *Id.*

State Representative Phil Phelps issued information requests under the Freedom of Information Act (FOIA) to the Department of Environmental Quality (DEQ), the Michigan Department of Treasury, and the City of Flint. Representative Phelps wants to see if the State and City knew in advance about the potential hazards now faced by Flint residents. He wants to see what had been done to avoid this disaster. He requests documents concerning evaluations of the quality of water in the Flint River, documents specifically pertaining to the application and permit process, and other documents relating to the change in the City's water source.

In public statements, State and City officials have discussed documents addressing the change from Detroit to Flint River water as Flint's primary source of water. However, in response to Representative Phelps' FOIA requests, they now deny that such documents exist. The cleanliness of the water is a critical health and safety issue, which must be revealed to the public. The Defendants cannot make public assurances of the existence of documents, only to refuse to turn those documents over.

As a result, Representative Phelps is now forced to file this action, along with another action in the Michigan Court of Claims, seeking to disclose information that the public has the right to know. For those reasons, Plaintiff Phelps seeks an Order from this Court requiring the City to respond to Plaintiff's FOIA requests and seeking costs and attorney fees for having to file this action.

PARTIES, JURISDICTION, AND VENUE

1. This matter arises under the Michigan Freedom of Information Act, MCL § 15.231, *et seq.* ("FOIA").

2. Plaintiff Phil Phelps is the elected State Representative for the 49th State House District. His District includes part of the City of Flint.

3. Defendant City of Flint is a public body as defined in MCL §15.232(d) having custody and control of public records. The City of Flint constitutes a supplier of water for the purposes of the Michigan Safe Drinking Water Act, MCL §325.1001 *et seq.*

4. This Court has jurisdiction over the subject matter of this complaint and venue is proper in this county, pursuant to MCL §15.240(4).

GENERAL ALLEGATIONS

5. Plaintiff incorporates herein by reference each of the preceding paragraphs.

6. Pursuant to MCL § 15.233, Plaintiff, as a member of the public, has the right to inspect, copy, or receive copies of public records of a public body, including records of the City of Flint.

7. For almost fifty years, the City of Flint purchased Lake Huron water from the Detroit Water and Sewerage Department ("DWSD").

8. On June 28, 2013, ground was broken by the Karegnondi Water Authority ("KWA") to build a pipeline to distribute Lake Huron water throughout Genesee County without DWSD.

9. Construction of the pipeline is set to be completed in late 2016.

10. Every community in Genesee County remained with DWSD during the construction of the pipeline with the exception of the City of Flint.

MILLER COHEN, P.L.C.
ATTORNEYS AND COUNSELORS AT LAW
600 WEST LAFAYETTE BLVD.
DETROIT, MICHIGAN 48226-0840
(313) 964-4454

11. Darnell Earley, the Emergency Manger appointed to the City of Flint by Governor Richard Snyder under the Local Financial Stability and Choice Act, MCL §141.1541 *et seq.*, implemented the switch from DWSD water to the Flint River that took place on April 25, 2014.

THE DECISION TO SWITCH FROM DWSD WATER TO FLINT RIVER WATER

12. Prior to switching from DWSD to Flint River water, the City of Flint, in conjunction with the Michigan Department of Environmental Quality and the Michigan Department of Treasury engaged in a process to evaluate the potential of using the Flint River as Flint's primary source of water. (*Exhibit A*, 91-95)

13. Gerald Ambrose, the financial advisor to the emergency manager for the City of Flint at the time, testified that: "There was brief evaluation of whether the City would be better off to simply use the Flint River as its primary source of water over the long term. That was determined not to be feasible." (Id. at 91)

14. Mr. Ambrose went on to testify that the determination that it was not feasible was made by "the emergency management team based on conversations with the MDEQ that indicated they would not be supportive of the use of the Flint River on a long-term basis as a primary source of water." (Id.)

15. Mr. Ambrose also testified in regards to an independent study that was conducted by the State Department of Treasury as to the feasibility of changing the source of water to the Flint River. (Id. at 93-94)

16. Notwithstanding this evaluation, the City of Flint decided to move forward with changing the source of its drinking water to the Flint River until the KWA pipeline was finished.

17. In order to do so, however, the City of Flint was required by the Safe Drinking Water Act to apply for a permit to change the source of water:

MILLER COHEN, P.L.C.
ATTORNEYS AND COUNSELORS AT LAW
600 WEST LAFAYETTE BLVD.
DETROIT, MICHIGAN 48226-0840
(313) 964-4454

> (6) Before commencing the construction of a waterworks system or an alteration, addition, or improvement to a system, a supplier of water shall submit the plans and specifications for the improvements to the department and secure from the department a permit for construction as provided by rule. Plans and specifications submitted to the department shall be prepared by a professional engineer licensed under article 20 of the occupational code, 1980 PA 299, MCL 339.2001 to 339.2014. A contractor, builder, or supplier of water shall not engage in or begin the construction of a waterworks system or an alteration, addition, or improvement to a waterworks system until a valid permit for the construction has been secured from the department. A contractor, builder, or supplier of water who permits or allows construction to proceed without a valid permit, or in a manner not in accordance with the plans and specifications approved by the department, violates this act. A supplier of water shall not issue a voucher or check or in any other way expend money or provide consideration for construction of a waterworks system unless a valid permit issued by the department is in effect. The department may issue a permit with conditions to correct minor design deficiencies. If eligible, a supplier may request an expedited review of an application for a permit under section 4a.

MCL § 325.1004(6).

18. The Safe Drinking Water Act provides that the DEQ administers the Act and promulgates administrative rules to enforce its requirements. One of those administrative rules defines "alteration" to include "modification of, or addition to, an existing waterworks system, or portion of the system, that affects . . . the source . . . ." Admin. Rule 325.10102.

19. On the DEQ's website, the DEQ provides the application discussed above. (*Exhibit B*)

20. The application requires the submission of highly technical plans and analysis for the alteration of the Water System. (Id.)

21. Failure of a "supplier of water"—which include municipalities—to apply and receive a permit prior to alteration of a Water System violates the Act punishable by a fine of not more than $5,000.00 for each day of violation, or by imprisonment for not more than 1 year, or both. MCL § 325.1021.

22. Prior to switching to the Flint River, it was reported that the City was in the process of applying for such a permit. (*Exhibit C*)

MILLER COHEN, P.L.C.
ATTORNEYS AND COUNSELORS AT LAW
600 WEST LAFAYETTE BLVD.
DETROIT, MICHIGAN 48226-0840
(313) 964-4454

23. On March 28, 2014, it was reported that the Michigan Department of Environmental Quality halted the City's attempt to move forward with the switch in water source without receiving the permit. (Id.) Steve Busch, the Lansing and Jackson district supervisor for the DEQ, noted that the DEQ had only received "preliminary design plans and preliminary specifications" that the agency had commented on. (Id.)

24. Howard Croft, Flint's Director of Public Works, denied the inadequacy of the plans provided noting that the City had provided "A fully engineered construction package, including all the work to be performed." (Id.) He went on to note that, "The submittal package has been under review for more than 30 days. The city has had ongoing discussions with the DEQ regarding the process and we anticipate a favorable response soon." (Id.)

25. On April 5, 2014, Emergency Manager Earley stated that the final application for the permit was filed with the DEQ noting that "We expect to have the permit early next week." (*Exhibit D*)

26. Sure enough, the very next week, the spokesman for the Department of Environmental Quality (DEQ), Brad Wurfel, was reported on April 10, 2014 as saying that the DEQ issued "a series of construction permits" noting that "They are racing to get all this work done." (*Exhibit E*)

27. The switch to Flint River water took place on April 25, 2014. (*Exhibit F*)

MILLER COHEN, P.L.C.

(313) 964-4454

RESIDENTS OF FLINT ARE EXPOSED TO CONTAMINANTS AFTER THE SWITCH TO FLINT RIVER WATER

28. Since switching to Flint River water, Flint residents have been placed in jeopardy being exposed to substantial threats to their health and safety due to contaminants found in their drinking water.

29. On August 14, 2014, the water tested positive for fecal coliform bacteria, E.coli, leading the City to issue a boil water advisory. (*Exhibit G*)

30. The water once again tested positive on August 19, 2014 with boil water advisories extending into late September 2014. (*Exhibit H*)

31. On January 2, 2015, a new threat to public health and safety was identified. In an effort to eliminate the bacteria, the City increased the chlorine used in the System. Residents began complaining that the water was causing skin rashes and their hair falling out. (*Exhibit I*)

32. Then, on January 2, 2015, the City of Flint officially announced that the level of trihalomethanes (TTHMs)—a byproduct of disinfectant—was higher than the allowable amount provided for in federal law forcing the City to provide notice to residents. (*Exhibit J*)

33. Long term exposure to TTHMs can create liver, kidney, or central nervous system problems, and may increase the risk of cancer, especially amongst those who have severely compromised immune systems such as infants or the elderly. (Id.)

34. Over nine months later, the City was finally able to reduce TTHM levels to the federal limit. (*Exhibit K*)

35. Most recently, in July 2015, Virginia Tech University researchers released the results of their own independent study of Flint's water supply revealing incredibly high amounts of lead far exceeding the allowable limitations of lead content under federal law. (*Exhibit L*)

MILLER COHEN, P.L.C.
ATTORNEYS AND COUNSELORS AT LAW
600 WEST LAFAYETTE BLVD.
DETROIT, MICHIGAN 48226-0840
(313) 964-4454

36. On September 2, 2015, the researchers at Virginia Tech released another study that compared the DWSD water to the Flint River water (*Exhibit L*) That study concluded that the natural corrosive properties of Flint River water is leaching lead from the City's aging infrastructure. (*Exhibit L*)

37. On September 24, 2015, the results of a subsequent study by Dr. Mona Hanna-Attisha, program director for the pediatric residency at the Hurley Children's Hospital at Hurley Medical Center in Flint were released finding an elevated level of lead in the blood samples of Flint children. (*Exhibit M*) Specifically, the study showed that the number of children in the City with elevated blood levels nearly doubled after the city started using the river. (Id.)

38. According to Dr. Hanna-Attisha: "What we found in our data is concerning." (Id.) Dr. Hanna-Attisha noted that "This is not something you mess around with." (Id.)

REPRESENTATIVE PHELPS SEEKS DOCUMENTS RELATING TO CHANGING THE CITY'S SOURCE OF WATER TO THE FLINT RIVER AND THE CITY AND STATE FAILED TO COMPLY

39. In response to this health crisis, Representative Phelps requested the following records from the Michigan Department of Environmental Quality, the Michigan Department of Treasury, and the City of Flint pursuant to FOIA on September 4, 2015:

1. All documents the [City of Flint/Michigan Department of Treasury/Michigan Department of Environmental Quality], or its agents, has in its possession, including correspondence, related to any waivers, permits or applications to use the Flint River as a source for water and/or drinking water for the City of Flint or any other municipality or municipal entity.
2. All documents the [City of Flint/Michigan Department of Treasury/Michigan Department of Environmental Quality], or its agents, has in its possession, including correspondence, related to any communications between the Michigan Department of Environmental Quality, or its agents, and/or the Michigan Department of Treasury, or its agents, regarding any waivers, permits or applications to use the Flint River as a source for water and/or drinking water for the City of Flint or any other municipality or municipal entity.

3. All documents the [City of Flint/Michigan Department of Treasury/Michigan Department of Environmental Quality] has in its possess, including correspondence, related to any communications between the [City of Flint of Treasury/Michigan Department of Treasury/Michigan Department of Environmental Quality], or its agents, and the Office of the Governor of the State of Michigan, or its agents, regarding any waivers, permits or applications to use the Flint River as a source for water and/or drinking water for the City of Flint or any other municipality or municipal entity.

(*Exhibit N*)

40. On September 4th, Representative Phelps had a face-to-face conversation with Howard Croft, Flint's Director of Public Works, at the Flint City Hall beginning shortly after 3:00pm and ending around 4:20pm. Representative Sheldon Neeley was also present during the meeting.

41. Both Representative Phelps and Neeley asked several questions regarding the switch to Flint River water, the permits and applications surrounding the switch, potential hold ups/delays in the switch due to DEQ's approval process, and correspondence between the City of Flint and the DEQ regarding all of the previous items.

42. Howard Croft said that they did in fact have documents related to those topics and stated that it would be no problem to share them with both Representatives.

43. On September 14, 2015, the City of Flint changed its story. In the City of Flint's formal response to Representative Phelps' FOIA requests dated September 14, 2015, the City has refused to provide those documents. (*Exhibit O*)

44. Contradicting Mr. Croft's earlier assertions as well as statements made to the press in 2014, the City of Flint asserted that no such documents exist:

> The records which you have requested do not exist under the name given by the requester or by another name reasonably known to this public body or are not retained by this public body in the performance of an official functions. This is a certification of their non-existence. No Records—Requested documents do not exist.

45. The DEQ responded on or about September 16th by telephone indicating that it was DEQ policy to provide copies of documents to members of the State Legislature free of charge and noting that there were several documents that would be sent over to Representative Phelps' office via email, but only if he withdrew his FOIA request.

46. Representative Phelps indicated that he had to contact his attorney to discuss whether he should withdraw the FOIA requests. Since that day, Representative has not received any verbal communication with the DEQ.

47. On September 28, 2015, after Representative Phelps refused to withdraw his FOIA request, the DEQ changed its tone like the City of Flint. (*Exhibit P*)

48. Brad Wurfel, the spokesman for the DEQ stated in an interview with Gongwer that "Flint did not have to file an application because the City has always listed the Flint River as its back-up should it need it for a water supply." (*Exhibit Q*)

49. Obviously, Mr. Wurfel's most recent statement ignores the statements that he, and others, made to the media prior to the switch. They all maintained that Flint was required to file an application for a permit with the DEQ and did in fact file an application that was ultimately approved by the DEQ on or about April 10, 2014.

50. Nonetheless, Mr. Wurfel indicated during that interview that "other documents . . . are available—to Mr. Phelps or anyone—dealing with the process the city and state took preparing for the switch." (Id.) To date, Representative Phelps has not received these other documents.

51. Similarly, the Michigan Department of Treasury denied Representative Phelps' FOIA request on the same grounds as the City of Flint and the DEQ on September 29, 2015. (*Exhibit R*)

52. To date, Representative Phelps' has not received the documents that he requested.

MILLER COHEN, P.L.C.
ATTORNEYS AND COUNSELORS AT LAW

53. The public has a right to know the degree to which the State knew about or took any action to determine the potential hazards of making this switch, prior to the decision being implemented by the State-appointed Emergency Manager. It is for that reason that Representative Phil Phelps brings this suit to compel the City of Flint to provide the documents requested pursuant to FOIA.

COUNT I

VIOLATION OF THE FREEDOM OF INFORMATION ACT

54. Plaintiff incorporates herein by reference each of the preceding paragraphs.

55. Documents, such as correspondence and communications, relating to any waivers, permits or applications to use the Flint River as a source for water and/or drinking water for the City of Flint or any other municipality or municipal entity constitute public records subject to FOIA.

56. Plaintiff reasonably described the documents that he was seeking.

57. No exemption recognized under FOIA applies to Representative Phelps' requests.

58. The Defendant's denial is wholly without merit as acknowledged by the Defendant's own agents in the past. Defendant failed to perform a good faith effort to conduct a search for the requested records using methods reasonably expected to produce the requested information.

59. Hence, Defendant violated the FOIA, and for the violation, the Defendant should face all fines, costs and fees as pursuant to the FOIA statute, as well as be ordered to immediately tender the information.

60. Due to the Defendant's refusal to respond to the FOIA requests, the Defendant now bears the burden to sustain the reason for its denial. MCL §15.240(4).

61. MCL § 15.240(5) provides that actions commenced pursuant to FOIA "shall be assigned for hearing and trial and for argument at the earliest practicable date and expedited in every way.

WHEREFORE, and for the above-stated reasons, Plaintiff requests that this Honorable Court grant the following relief:

a. Order an expedited hearing as required by MCL § 15.240(5);

b. Order that the Defendant to immediately respond to the FOIA requests of Plaintiff as found in the *Exhibit N* letters;

c. Find that the Defendant made a final determination to deny the FOIA requests, and such determination was in violation of the FOIA and arbitrary and capricious. Thus, Order that the Defendant pay to Plaintiff reasonable attorney's fees, costs and disbursements, and order punitive damages of $5.00;

d. Award all other relief as this Court deems appropriate.

Respectfully submitted,

MILLER COHEN, P.L.C.

UNITED STATES DISTRICT COURT
EASTERN DISTRICT OF MICHIGAN

JOHN WELCH, JUDITH WELCH, KENNETH SPARKS, JR., CAROL SPARKS, SHERRY MURPHY, AND MARK FULKS ON BEHALF OF THEMSELVES AND ALL OTHERS SIMILARLY SITUATED, AND UNITED RETIRED GOVERNMENTAL EMPLOYEES (URGE), A MICHIGAN NONPROFIT CORPORATION,

Plaintiffs,

CASE NO: 2:12-cv-13808-AJT-MKM

vs

HON. ARTHUR J. TARNOW

MICHAEL BROWN, INDIVIDUALLY AND IN HIS OFFICIAL CAPACITY AS EMERGENCY MANAGER OF THE CITY OF FLINT, EDWARD KURTZ, INDIVIDUALLY AND IN HIS OFFICIAL CAPACITY AS EMERGENCY MANAGER OF THE CITY OF FLINT, ROBERT ERLENBECK, INDIVIDUALLY AND IN HIS OFFICIAL CAPACITY AS MANGER FOR THE CITY OF FLINT RETIREMENT OFFICE, GERALD AMBROSE, INDIVIDUALLY AND IN HIS OFFICIAL CAPACITY AS CITY OF FLINT FINANCE DIRECTOR, AND THE CITY OF FLINT,

Defendants.
_____/

The Deposition of GERALD AMBROSE, taken before me, Claudia M. Weekly, CSR-2963, on Tuesday, May 20, 2014, at 1101 South Saginaw Street, 2nd Floor Conference Room, Flint, Michigan, commencing at or about 10:17 A.M.

talking about, are you referring to the cost of the City's participation in the pipeline?

Q Both.

A I had no direct involvement in any discussions relating to the actual cost estimates for the construction of the pipeline. I was, however, involved in doing the analysis of the cost benefit to the City of participating in the Karegnondi Water Authority as compared to continuing to receive, to purchase water from the Detroit Water and Sewer System.

Q Were any other options -- did you look at any other options apart from those two or variations of those two?

A There was brief evaluation of whether the City would be better off to simply use the Flint River as its primary source of water over the long term. That was determined not to be feasible.

Q Who determined that it wasn't feasible?

A It was a collective decision of the emergency management team based on conversations with the MDEQ that indicated they would not be supportive of the use of the Flint River on a long-term basis as a primary source of water.

Q What was the reason that they gave?

A You'll have to ask them.

Q Okay. You don't recall?

A I do not recall.

Q Now, am I correct in that is actually what is happening now, for at least a short-term --

A That's correct.

Q -- the City of Flint is using its own facilities and supplying its own water through the Flint River?

A That is correct.

Q When was the possibility of using that as a long-term solution abandoned?

MR. WARREN: Do you mean the Flint River?

MR. ALEC GIBBS: Yes.

THE WITNESS: Probably sometime in FY13. I don't recall specifically.

MR. BADE: I'm just going to object to the form of the question. Abandoned by whom?

Q (BY MR. ALEC GIBBS) By the collective body that was responsible for making the ultimate decision by the City of Flint, I assume. Sometime in fiscal year 2013?

A Sometime between -- I guess sometime probably during '13, I believe, or perhaps even midway through '12.

Q Okay.

A I don't recall the specific dates.

Q But it was based on communications from the Michigan Department of Environmental Quality.

MR. WARREN: Objection; asked and answered. You can answer.

THE WITNESS: It was based on information that we received from others within the City who said that MDEQ was not supportive of a long-term use of the Flint River.

Q (BY MR. ALEC GIBBS) Who are the City of Flint sources who communicated the Michigan Department of Environmental Quality's position?

MR. WARREN: Object to lack of foundation. You can answer.

THE WITNESS: I believe it was our utilities administrator, our public works director.

Q (BY MR. ALEC GIBBS) And who are those individuals?

A Howard Croft, Daugherty Johnson.

Q Are you aware of an independent study on the feasibility of alternative plans for water supply for the City of Flint that was commissioned by the Department of Treasury?

MR. WARREN: I'm going to object to relevance. We're getting really far afield here. I'm not directing him not to answer, but hopefully this can be tied up very quickly and we can all move on.

Q (BY MR. ALEC GIBBS) I'm just asking if you're aware of the study.

A Tell me what the name of the study is.

Q I have it here. Mark this as Exhibit 5.

(Exhibit Number 5 was marked.)

Q (BY MR. ALEC GIBBS) Do you recognize this study?

A I do not recall seeing this actual document, but I am aware of the study.

Q Okay. Do you remember when this study was commissioned?

A I don't know. Apparently it was completed in February of 2013.

Q The study makes reference to a number of meetings between the City of Flint and the Department of Treasury concerning the investigation into water supply options for the City of Flint. Did you participate in any of those meetings?

A I did.

Q What meetings do you recall participating in?

A I recall one or two meetings in Lansing. I don't remember when.

Q Do you remember if one of those meetings took place in December of 2012?

A I do not recall the date.

Q Do you remember who participated in these meetings?

A I do not recall. I was in attendance with the emergency manager then Michael Brown, as I recall, or Ed Kurtz. I honestly do not recall the dates and the timing.

Q Okay. There is a reference to, if you look to Page 2 of the study, it says although it appeared that this was

a -- it references an option for the Flint water treatment plant to supply the City of Flint without being supplied from either DWSD or KWA was initially considered. The preliminary investigation evaluated the cost associated with the required improvements to the plant and the Flint River dam system. And that although it appeared that this was a viable option, Flint, in a meeting on December 20th, 2012 with the treasury, stated that the City did not want to pursue that option and it is no longer being considered.

Do you recall that being discussed in one of those meetings you referred to earlier?

A No. But that's consistent with the decision that we reached.

Q You indicated that you did participate in some of the evaluations of the cost projections at least as it concerned Flint's contribution to the pipeline.

A Flint's participation in the pipeline, yes.

Q Okay. Well, what is your understanding of what Flint's annual contributions will be over the term of years for the loan bond amounts? In other words, what are Flint's debt service payments relative to the pipeline construction going to be on an annual basis?

A The debt service only?

Q And any payments associated with the pipeline

EXHIBIT B

PERMIT APPLICATION FOR WATER SUPPLY SYSTEMS

(CONSTRUCTION - ALTERATION - ADDITION OR IMPROVEMENT) AS DESCRIBED HEREIN

Required under the Authority of 1976 PA 399, as amended

This application becomes an Act 399 Permit only when signed and issued by authorized Michigan Department of Environmental Quality (DEQ) Staff. See instructions below for completion of this application.

Municipality or Organization, Address and WSSN that will own or control the water facilities to be constructed. This permit is to be issued to: **WSSN**:	Permit Stamp Area (DEQ use only)	
Owner's Contact Person (provide name for questions): Contact: Title: Phone:		
Project Name (Provide phase number if project is segmented):	4. **Project Location** (City, Village, Township):	5. **County** (location of proje

ISSUED UNDER THE AUTHORITY OF THE DIRECTOR OF THE DEPARTMENT OF ENVIRONMENT QUALITY

cc:

Issued by: _____

Reviewed by: _____

☐ **If this box is marked see attached special conditions.**

Instructions: Complete items 1 through 5 above and 6 through 21 on the following pages of this application. Print or typ all information except for signatures. Mail completed application, plans and specifications, and any attachments to the DE District Office having jurisdiction in the area of the proposed construction.

Please Note:

a. This **PERMIT** only authorizes the construction, alteration, addition or improvement of the water system described herein and is issued solely under the authority of 1976 PA 399, as amended.
b. The issuance of this **PERMIT** does not authorize violation of any federal, state or local laws or regulations, nor doe it obviate the necessity of obtaining such permits, including any other DEQ permits, or approvals from other units c government as may be required by law.
c. This **PERMIT** expires two (2) years after the date of issuance in accordance with R 325.11306, 1976 PA 399, administrative rules, unless construction has been initiated prior to expiration.
d. Noncompliance with the conditions of this permit and the requirements of the Act constitutes a violation of the Act.
e. Applicant must give notice to public utilities in accordance with 1974 PA 53, (MISS DIG), being Section 460.701 to 460.718 of the Michigan Compiled Laws, and comply with each of the requirements of that Act.
f. All earth changing activities must be conducted in accordance with the requirements of the Soil Erosion and Sedimentation Control Act, Part 91, 1994 PA 451, as amended.
g. All construction activity impacting wetlands must be conducted in accordance with the Wetland Protection Act, Par 303, 1994 PA 451, as amended.
h. Intentionally providing false information in this application constitutes fraud which is punishable by fine and/or imprisonment.
i. Where applicable for water withdrawals, the issuance of this permit indicates compliance with the requirements of Part 327 of Act 451, Great Lakes Preservation Act.

Facilities Description – In the space below provide a detailed description of the proposed project. Applications without adequate facilities descriptions **will be returned**. SEE EXAMPLES BELOW. Use additional sheets if needed.

EXAMPLES – EXAMPLES – EXAMPLES – EXAMPLES – EXAMPLES – EXAMPLES

Water Mains	500 feet of 8-inch water main in First Street from Main Street north to State Street. **OR** 250 feet of 12-inch water main in Clark Road from an existing 8-inch main in Third Avenue north to a hydrant.
Booster Stations	A booster station located at the southwest corner of Third Avenue and Main Street, and equipped with two, 15 Hp pumps each rated 150 gpm @ 200 feet TDH. Station includes backup power and all other equipment as required for proper operation.
Elevated Storage Tank	A 300,000 gallon elevated storage tank located in City Park. The proposed tank shall be spherical, all welded construction and supported on a single pedestal. The tank shall be 150 feet in height, 40 feet in diameter with a normal operating range of 130 – 145 feet. The interior coating system shall be ANSI/NSF Standard 61 approved or equivalent. The tank will be equipped with a cathodic protection system, and includes a tank level control system with telemetry.
Chemical Feed	A positive displacement chemical feed pump, rated at 24 gpd @ 110 psi to apply a chlorine solution for Well No. 1. Chlorine is 12.5% NaOCL, ANSI/NSF Standard 60 approved and will be applied at a rate of 1.0 mg/l of actual chlorine.
Water Supply Well	Well No. 3, a 200 foot deep well with 170 feet of 8-inch casing and 30 feet of 8-inch, 10 slot screen. The well will be equipped with a 20 Hp submersible pump and motor rated 200 gpm @ 225 feet TDH, set at 160 feet below land surface.
Treatment Facilities	A 5 million gpd water treatment plant located at the north end of Second Avenue. The facility will include 6 low service pumps, 2 rapid mix basins, 4 flocculation/sedimentation basins, 8 dual media filters, 3 million gallon water storage reservoir and 6 high service pumps. Also included are chemical feed pumps and related appurtenances for the addition of alum, fluoride, phosphate and chlorine.

General Project Information – Complete all boxes below.

7. Design engineer's name, engineering firm, address, phone number, and email address:

8. Indicate who will provide project construction inspection:
☐Organization listed in Box 1.
☐Engineering firm listed in Box 7.
☐Other - name, address, and phone number listed below.

9. Is a basis of design attached?
☐YES ☐NO

If no, briefly explain why a basis of design is not needed.

10. Are sealed and signed engineering plans attached?
☐YES ☐NO

If no, briefly explain why engineering plans are not needed.

11. Are sealed and signed construction specifications attached?
☐YES ☐NO

If specifications are not attached, they need to be on file at DEQ.

12. Were Recommended Standards for Water Works, Suggested Practice for Water Works, AWWA guidelines, and the requirements of Act 399 and its administrative rules followed?
☐YES ☐NO

If no, explain which deviations were made and why.

13. Are all coatings, chemical additives and construction materials ANSI/NSF or other adequate 3rd party approved?
☐YES ☐NO

If no, describe what coatings, additives or materials did not meet the applicable standard and why.

14. Are all water system facilities being installed in the public right-of-way or a dedicated utility easement? (For projects not located in the public right-of-way, utility easements must be shown on the plans.)
☐YES ☐NO

If no, explain how access will be obtained.

15. Is the project construction activity within a wetland (as defined by Section 324.30301(d)) of Part 303, 1994 PA 451?
☐YES ☐NO

If yes, a wetland permit must be obtained.

16. Is the project construction activity within a 100-year floodplain (as defined by R 323.1311(e)) of Part 31, 1994 PA 451, administrative rules?
☐YES ☐NO

If yes, a flood plain permit must be obtained.

17. Is the project construction activity within 500 feet of a lake, reservoir, or stream?
☐YES ☐NO

If yes, a Soil and Erosion Control Permit must be obtained or indicate if the owner listed in box 2 of this application is an Authorized Public Agency (Section 10 of Part 91, 1994 PA 451) ☐ Owner is APA.

18. Will the proposed construction activity be part of a project involving the disturbance of five (5) or more acres of land?
☐YES ☐NO

If yes, is this activity regulated by the National Pollutant Discharge Elimination System storm water regulations?
☐YES: NPDES Authorization to discharge storm water from construction activities must be obtained.

☐NO: Describe why activity is not regulated:

Please call 517-241-8993 with questions regarding the applicability of the storm water regulations.

19. Is the project in or adjacent to a site of suspected or known soil or groundwater contamination?
☐YES ☐NO

If yes, attach a copy of a plan acceptable to the DEQ for handling contaminated soils and/or groundwater disturbed during construction. Contact the local DEQ district office for listings of Michigan sites of environmental contamination.

20. IF YOU ARE A CUSTOMER/WHOLESALE/BULK PURCHASER, COMPLETE THE FOLLOWING

1) Name and WSSN of source water supply system (seller) _____

2) Does the water service contract require water producer/seller to review and approve customer/wholesale/bulk purchaser water system construction plans?
☐YES ☐NO

If yes to #2, the producer/seller approval letter must be attached when submitted to DEQ.

21. **Owner's Certification** The owner of the proposed facilities or the owner's authorized representative shall complete the owner's certification. It is anticipated that the owner will either be a governmental agency (city, village, township, county, etc.) or a private owner (individual, company, association, etc.) of a Type I public water supply.

OWNER'S CERTIFICATION

I, _____ (name), acting as the _____ (title/position) fo
(print) (print)

_____ (entity owning proposed facilities) certify that this project has
(print)

been reviewed and approved as detailed by the Plans and Specifications submitted under this application, and is in compliance with the requirements of 1976 PA 399, as amended, and its administrative rules.

Signature* Date Phone

*Original signature only, no photocopies will be accepted.

PROJECT BASIS OF DESIGN – FOR WATER MAIN PROJECTS

PROJECT NAME: _____

For this PROJECT the following information must be provided per Act 399 unless waived by the Department. For projects other than water main installation, or if additional space is needed, attach separate sheet(s) with detailed Basis of Design calculations.

A. A general map of the initial and ultimate service areas
☐ Included on engineering plans ☐ Attached separately

B. Number of service connections served by this permit application _____

C. Total number of service connections ultimately served by entire project _____

D. Residential Equivalent Units (REUs) served by this permit application _____

E. Total Residential Equivalent Units (REUs) ultimately served by entire project _____

F. Water flow rates for proposed project based on REUs listed in "D' and "E" above

1. Initial design average day flow (mgd) _____
2. Initial design maximum day flow (mgd) _____
3. Total design average day flow (mgd) _____
4. Total design maximum day flow (mgd) _____
5. Required fire flows: (1) _____ gpm for _____ hours

G. Actual flows and pressures of existing system at the connection point(s) (2)

_____ gpm at _____ psi
_____ gpm at _____ psi
_____ gpm at _____ psi
_____ gpm at _____ psi

H. Estimated minimum flows and pressures within the proposed water main system (3)

_____ gpm at _____ psi

(1) Every water system must decide what levels of fire fighting flows they wish to provide. Fire flow should be appropriate for the area (residential, commercial, industrial) being served by the project. Typical fire flow rates can be obtained from the water supply, local fire dept., ISO or AWWA. The water system must then be designed to be able to provide the required fire flows while maintaining at least 20 psi in all portions of the distribution system.

(2) Flows and pressures at the connection points must be given to determine if the existing water main(s) are able to deliver water to the new service area. These numbers can be obtained from a properly modeled and calibrated distribution system hydraulic analysis or hydrant flow tests performed in the field. If more than one connection is proposed, list as needed.

(3) List what the estimated minimum flows can be expected in the proposed water mains based on estimated water demands, head losses, elevation changes and other factors that may affect flows, such as dead end mains.

EXHIBIT C

State says Flint hasn't applied for permit to use river as drinking water source

A look at Flint water plant's facilities
The city plans to switch over to the Flint River as a primary drinking water source in April. *(MLive.com File Photo)*

Dominic Adams | dadams5@mlive.com By **Dominic Adams | dadams5@mlive.com**
Follow on Twitter
on March 28, 2014 at 6:30 AM, updated March 28, 2014 at 6:35 AM

FLINT, MI – Not so fast, state officials are telling Flint administrators charging toward an April 18 date to begin using the Flint River for all of the city's water needs.

The Michigan Department of Environmental Quality says it hasn't received the proper paperwork from the city. When the state does get it, a review of the application for state permission to use the river could take 30 to 45 days.

The city is switching over from buying treated water from Detroit to using the Flint River for drinking water temporarily. Once the Karegnondi Water Authority completes its pipeline from Lake Huron to Genesee County, Flint will switch to the KWA.

"In regards to the actual application, we haven't received one," said Steve Busch, Lansing and Jackson district supervisor in the DEQ's office of drinking water and municipal assistance. "We've received preliminary design plans and preliminary specifications and we've commented on those. They may be waiting until they have all the comments worked out before they submit the application."

Flint has bought treated Lake Huron water from Detroit, but that contract was terminated when Flint signed on to purchase 18 million gallons of raw water per day from the Karegnondi Water Authority. The contract termination goes into effect April 17.

The under-construction pipeline will bring raw Lake Huron water to Flint and Genesee County when it is complete by the end of 2016.

People in the city will drink Flint River water until the pipeline is complete. The Detroit Water and Sewerage

Department said it would **stop selling water to Flint and Genesee County** on its current contract on April 17, 2014. Genesee County is negotiating with Detroit for water until the KWA pipeline is flowing.

Busch said state reviews generally take between 30 and 45 days, but would not comment on if Flint would be ready to transition to river water by the time Detroit terminates the contract with the city.

"A fully engineered construction package, including all the work to be performed, has been submitted to the DEQ by the city of Flint in preparation for the transition to use of the Flint River as a temporary primary water source," said Howard Croft, Flint's director of public works, in a statement. "The submittal package has been under review for more than 30 days. The city has had ongoing discussions with the DEQ regarding the process and we anticipate a favorable response soon."

If the state hasn't approved Flint's use of river water by April 18, Busch said, the city would just continue to buy water from Detroit on a non-contract price until Flint has state OK to begin using the river.

"I don't think there is any scenario that we will just willy-nilly cut off service for Flint," said Bill Johnson, a consultant and spokesman for Detroit Water and Sewerage Department. "Negotiations are continuing."

Croft said the DEQ has been reviewing the request and asking questions throughout.

"When both sides come to an agreement and all issues have been addressed, then the permit is granted," Croft said in the statement. "Flint has been in ongoing communication with Genesee County and the DWSD to ensure that there is no interruption of water service to Flint customers. As the Mayor (Dayne Walling) said in his State of the City address 'beginning this spring, we will be using treated water from the Flint River as our temporary primary water source.' We are still on target to meet this goal."

Croft said there will be a series of public forums where residents can ask questions about the city's water transition, what that will mean for rates and others. He did not have specifics about when and where those meetings will take place.

Emergency manager says city could have permit to use Flint River water by next week

Ron Fonger | rfonger1@mlive.com By **Ron Fonger | rfonger1@mlive.com**
on April 05, 2014 at 6:00 AM, updated April 05, 2014 at 6:03 AM

FLINT, MI -- The city expects to have a state permit that will allow it to use the Flint River for drinking water by next week.

Emergency manager Darnell Earley said today, April 4, that the final application for the permit has been filed with the state Department of Environmental Quality after months of working with the state to ensure smooth sailing for the application.

"We expect to have the permit early next week," said Earley. "We are still on track to operate our treatment plant this spring."

The emergency manager's comments come after a **story in MLive-The Flint Journal** last week indicated the DEQ had not received the proper paperwork from the city for permission to use the river.

DEQ officials said in the story that the application process could take 30-45 days, but Earley challenged the idea that it will take that long and said city and state officials have been working closely in advance of submitting the final application.

The city is attempting to switch from buying treated water from the city of Detroit to using the Flint River for drinking water temporarily by mid-April.

Once the Karegnondi Water Authority completes its pipeline to Lake Huron, the city has committed to switching back to using water from Lake Huron and the KWA again

Earley said he expects to transition from Detroit water to Flint River water by April 17, the date Detroit officials have set for terminating the existing arrangement between the two cities.

"We don't think there will be a lag" between those dates, he said.

Earley said he has a contingency plan if the switch to the Flint River isn't made by April 17. Detroit Water

and Sewerage officials have said they don't intend to attempt to shut off the water supply to the city under any circumstances.

Flint gets final permit approvals from state to use Flint River for drinking water

Ron Fonger | rfonger1@mlive.com By **Ron Fonger | rfonger1@mlive.com**
on April 10, 2014 at 4:00 PM, updated April 10, 2014 at 4:10 PM

FLINT, MI -- Bottoms up, Flint.

The state of Michigan has issued the **permits needed** for the city to begin using the Flint River for drinking water, a major step toward ending water purchases from the city of Detroit as early as next week.

"They've got a series of construction permits" that were issued Wednesday, April 10, said Brad Wurfel, a spokesman for the state Department of Environmental Quality. "They are**racing** to get all this work done."

The permits have been on Flint's to-do list since the Detroit Water and Sewerage Department said it was terminating its contract to sell water here on April 17.

That deadline was issued one year ago, and city and state water officials have been working and consulting on required upgrades at Flint's water treatment plant since.

Flint spokesman Jason Lorenz said today, April 10,that the city is still targeting April 17 as the day to shut off Lake Huron water -- treated and pumped here by DWSD -- and to turn on the intakes into the river.

Because work is still going on inside and outside the city's treatment plant, the exact time and date for the switch hasn't been set yet, Lorenz said.

Earlier this week, Flint emergency manager Darnell Earley called the city's ability to cut out the cost of water purchases from Detroit a "monumental change" for the city.

"The city of Flint will be able to control water costs," Earley said. "I'm kind of glad we're not a part of that discussion (about the future of the Detroit water system) anymore."

A consultant hired by Earley is expected to recommend new water rates during a City Council committee meeting at 5 p.m. today. The emergency manager has already said**rates will not be reduced** because of upgrades that are needed in Flint's water distribution system.

Flint officials will need that infrastructure upgrade whether they use river or lake water. City officials have signed an agreement to use Lake Huron water supplied by the Karegnondi Water Authority once the pipeline it is building is completed -- something that's expected to happen in 2016.

on April 25, 2014 at 1:00 PM, updated April 28, 2014 at 10:30 AM

FLINT, MI – Mayor Dayne Walling asked for a countdown from the group of about a dozen people huddled inside a small building on Friday, April 25.

"Three, two, one," they counted, then Walling pushed a small black button.

Seconds later, a green light winked out, and that was it.

Watch the video to see Flint effectively cut its water ties with Detroit when the mayor pushes the button.

Flint will use the river until the Karegnondi Water Authority builds its pipeline to Genesee County. The $274 million project is expected to be complete sometime in 2016.

Friday's event at the Flint water treatment plant also featured Walling and other elected officials drinking Flint River water.

"It tastes like...water," said Fourth Ward Councilman Joshua Freeman after drinking a cup.

It should take about two days for the residual Detroit water to clear the city's water system before all Flint customers will be drinking treated river water.

"Water is an absolute vital service that most everyone takes for granted," Walling said. "It's a historic moment for the city of Flint to return to its roots and use our own river as our drinking water supply."

EXHIBIT G

Second positive coliform bacteria test means Flint's west side water boil notice still in effect

Ron Fonger | rfonger1@mlive.com By **Ron Fonger | rfonger1@mlive.com**
on August 18, 2014 at 4:00 PM, updated January 17, 2015 at 10:28 AM

(This story has been updated to correct information about water test results in the boil water advisory area.)

Flint Journal file photo

FLINT, MI -- A second water sample in an area where residents have been told to boil their drinking water has tested positive for total coliform, meaning owners of businesses and residents there should continue to boil water until further notice -- at least until Wednesday, Aug. 19.

"We don't know yet what caused this. We don't have a smoking pistol," said Mike Prysby, an engineer with the Michigan Department of Environmental Quality.

Update: Flint officials say 'abnormal' test to blame in E. coli scare

Flint officials have ramped up testing in the boil-water area, a half-mile square area on the city's west side, since a positive test for fecal coliform bacteria on Thursday, Aug. 14.

Fecal coliform bacteria -- also known as E.coli -- can make people sick, and are a particular concern for those with weakened immune systems.

Prysby called fecal coliform bacteria in drinking water unusual, something that typically happens fewer than a half-dozen times in any given year statewide. Sometimes, doesn't happen anywhere in Michigan over a full calendar year, he said.

The second positive test for total coliform came from samples taken Saturday, Aug. 16, according to Prysby.

The U.S. Environmental Protection Agency says positive total coliform tests suggest there may be a pathway

for pathogens and/or fecal contamination to enter the drinking water distribution system.

For drinking water, total coliforms are used to determine the adequacy of water treatment and the integrity of the distribution system, according to EPA.

"The absence of total coliforms in the distribution system minimizes the likelihood that fecal pathogens are present," the agency Web site says. "Thus, total coliforms are used to determine the vulnerability of a system to fecal contamination."

Fecal coliform and E. coli are bacteria that indicate water may be contaminated with human or animal feces.

This is the area in which a boil water advisory is in effect on the west side of the city of Flint.

Microbes in these wastes can cause diarrhea, cramps, nausea, headaches, or other symptoms, and may also pose a special health risk for infants, young children, some of the elderly, and people with severely compromised immune systems, according to a news release from the city.

Flint's boil advisory is in an area bordered by Mann Hall Avenue on the north and east, Whitney Avenue on the south, and the city limits on the west.

The contamination is a concern for Sandi Blackmon, owner of Sandi's Elegant Catering on South Ballenger Highway, who said she's scrambling to keep up with her work with a boil advisory in effect.

Not only does the advisory say water for drinking should be boiled, but also water for washing dishes -- even brushing teeth.

"I'm concerned, because I'm a former culinary arts student. I know about what food-born bacteria can do ... E.coli can be deadly," Blackmon said.

Representatives of other restaurants in the busy commercial area of Balleneger and Corunna Road said they were boiling water Monday and will be until they receive an all-clear message from City Hall.

"It's inconvenient but we do it -- we do the best we can," said David Todorovsky, an owner of Atlas Coney Island.

Flint Councilwoman Vicki VanBuren, who represents the area, has another reason for concern about the boil water advisory.

"My mother lives in that area," VanBuren said. "She has a lot of health concerns (so) I took her over some bottled water and told her not to use (tap water) to drink or cook with it.

"This would concern me no matter what part of the city it was in," she said.

Council members could get more information on the water contamination and what may have caused it at committee meetings this week.

In the meantime, Prysby said there are multiple possible explanations for the contamination, including water main breaks in the area, chlorine levels that are off-kilter or a poor sample location or collection technique.

Prysby said water coming out of Flint's water treatment plant continues to meet all drinking water standards, meaning the problem is within the water distribution system.

"We haven't confirmed a reason," he said of the results, "We're still investigating further. In some situations, we never find out why."

The city is warning the people in the localized area to not drink the water without boiling it first for one minute, and letting it cool before using.

Boiled or bottled water should be used for not just drinking, but for making ice, brushing teeth, washing dishes and preparing food.

Tests positive for total coliform again in water-boil area on Flint's west side

Ron Fonger | rfonger1@mlive.com By **Ron Fonger | rfonger1@mlive.com**
on August 19, 2014 at 4:00 PM, updated January 17, 2015 at 10:25 AM

MLive file photo

FLINT, MI -- Water in a small area on Flint's west side has **tested positive** again for total coliform, and the city's boil water advisory there is continuing until at least Wednesday, Aug. 20.

Mike Prysby, district engineer for the Michigan Department of Environmental Quality, said water in the half-square-mile area tested positive for total coliform on Saturday, Aug. 16, and Sunday, Aug. 17.

Flint officials have ramped up testing in the boil-water area since a **positive test for fecal coliform bacteria** on Thursday, Aug. 14.

The boil-water area is Mann Hall Avenue on the north and east, Whitney Avenue on the south, and the city limits on the west.

Fecal coliform bacteria -- also known as E.coli -- can make people sick, and are a particular concern for those with weakened immune systems.

The U.S. Environmental Protection Agency says positive total coliform tests suggest there may be a pathway for pathogens and/or fecal contamination to enter the drinking water distribution system.

Total coliforms are used to determine the adequacy of water treatment and the integrity of the distribution system, according to EPA.

"The absence of total coliforms in the distribution system minimizes the likelihood that fecal pathogens are present," the agency Web site says. "Thus, total coliforms are used to determine the vulnerability of a system to fecal contamination."

The city of Flint**issued a statement** Monday, Aug. 18, saying "testing over the last 48 hours has shown no signs of E. coli or fecal coliform bacteria in the water," but makes no mention of the total coliform test results.

The city's statement says a sampling error is believed to be to blame for the initial abnormal test.

Prysby said the back-to-back positive total coliform tests are a "general indicator there could be more pathogenic organisms present" in water but is "not a direct indicator."

"We haven't narrowed it down to any one possibility (but) we don't play Russian roulette with public health," Prysby said of the abnormal samples and the need to continue testing.

Prysby said test results are "moving in the right direction" because there have been no additional discoveries of E. coli or fedcal coliform bacteria in water.

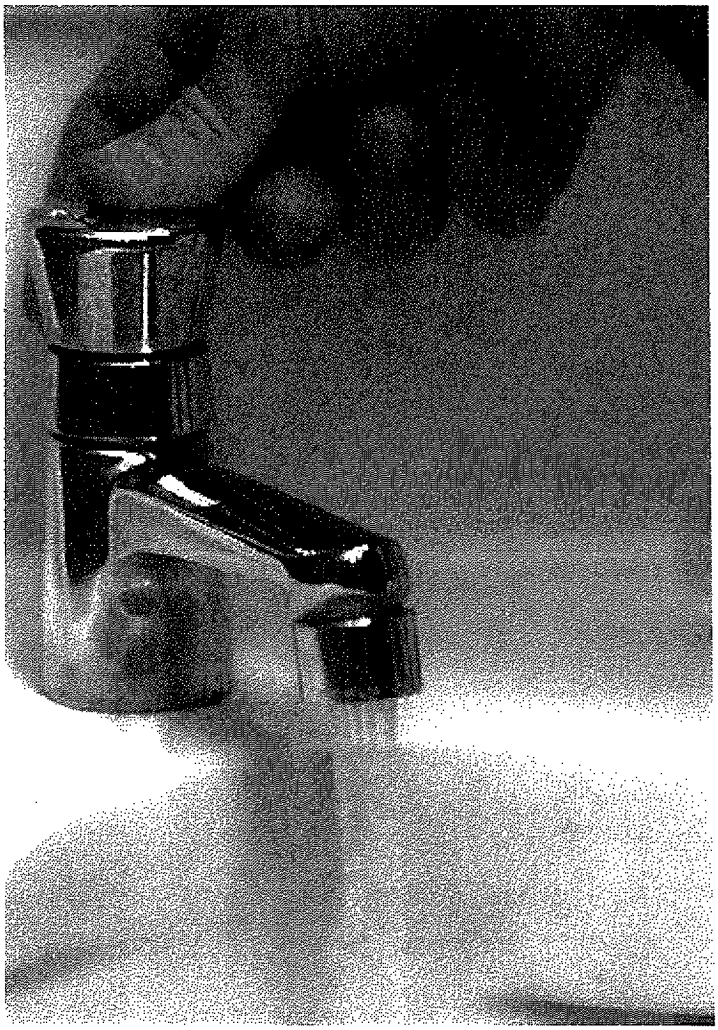
Flint issues boil water advisory for section of the city after positive test for total coliform bacteria

Ron Fonger | rfonger1@mlive.com By **Ron Fonger | rfonger1@mlive.com**
on September 05, 2014 at 6:56 PM, updated January 17, 2015 at 10:20 AM

FLINT, MI -- The city has issued a boil advisory for a portion of Flint, saying water in the area has tested positive for total coliform bacteria.



MLive file photo

The area of the advisory is bordered by Dayton Street on the north, DuPont Street on the east, the Flint River on the south, and by Lavelle Road to the Flint River on the west, the city said in a news released issued today, Sept. 5.

The latest advisory marks the **second time in less than 30 days** that residents and businesses in a part of the city have been told to boil or use bottled water for drinking, bathing, making ice, brushing teeth, washing dishes, and preparing food.

The U.S. Environmental Protection Agency says positive total coliform tests suggest there may be a pathway for pathogens and fecal contamination to enter a drinking water system.

Total coliforms are used to determine the adequacy of water treatment and the integrity of the distribution system, according to EPA.

"The absence of total coliforms in the distribution system minimizes the likelihood that fecal pathogens are present," the agency Web site says. "Thus, total coliforms are used to determine the vulnerability of a

system to fecal contamination."

Boiling water kills bacteria or other harmful organisms, according to the city's advisory.

"Total coliform bacteria are generally not harmful themselves. Coliforms are bacteria which are naturally present in the environment and are used as an indicator that other, potentially-harmful, bacteria may be present," the city's statement says.

"Usually, coliforms are a sign that there could be a problem with the treatment or distribution system (pipes). Whenever we detect coliform bacteria in any sample, we do follow-up testing to see if other bacteria of greater concern, such as fecal coliform or E. coli, are present. We did not find any of these bacteria in our subsequent testing," the statement says.

The city says it will flush the system in the boil advisory area and increase chlorine added to water.

All water testing results at the city's Water Treatment Plant have shown Flint's water, which is drawn from the Flint River, meets all Safe Water Drinking Standards when it leaves the facility.

The city says anyone with questions about the advisory or any other water issues should call 810-787-6537.

Important Information About Your Drinking Water

Tests showed coliform bacteria in the City of Flint water

Our water system recently violated a drinking water standard. Although this incident was not an emergency, as our customers, you have a right to know what happened and what we did to correct the situation.

We routinely monitor for drinking water contaminants. We took 150 samples to test for the presence of coliform bacteria during September 2014. 15 of those samples (10%) showed the presence of coliform bacteria. The standard is that no more than 5 percent of our samples may do so.

What should I do?

You do not need to boil your water or take other corrective actions. However, if you have specific health concerns, consult your doctor. People with severely compromised immune systems, infants, and some elderly may be at increased risk. These people should seek advice about drinking water from their healthcare providers. General guidelines on ways to lessen the risk of infection by microbes are available from EPA's Safe Drinking Water Hotline at 1-800-426-4791.

What does this mean?

This is not an emergency. A portion of the City was notified to boil their water at the time of the incident until it was resolved. Coliform bacteria are generally not harmful themselves.

Coliforms are bacteria which are naturally present in the environment and are used as an indicator that other, potentially harmful, bacteria may be present. Coliforms were found in more samples than were allowed and this was a warning of potential problems.

Usually, coliforms are a sign that there could be a problem with the system's treatment or distribution system (pipes). Whenever we detect coliform bacteria in any sample, we do follow-up testing to see if other bacteria of greater concern, such as fecal coliform or E. coli, are present. We did not find any of these bacteria in our subsequent testing, and further testing shows that this problem has been resolved.

What happened? What was done? On September 5, 2014, after routine and repeat samples showed the presence of total coliform, a boil water order was issued to the affected area. That area was flushed and resampled until samples were non-detect for total coliform. The boil order was lifted on September 9, 2014. Samples collected since then show that all results met acceptable limits.

For more information, please contact Mr. Brent Wright, Water Plant Supervisor, City Of Flint - DPW at 810.787.6537 ext. 3510 or Flint Water Plant - 4500 North Dort Highway, Flint, MI 48505.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

This notice is being sent to you by the City of Flint.

CERTIFICATION: F2, S3 WSSN: 02310

I certify that this water supply has fully complied with the public notification requirements in the Michigan Safe Drinking Water Act, 1976 PA 399, as amended, and the administrative rules.

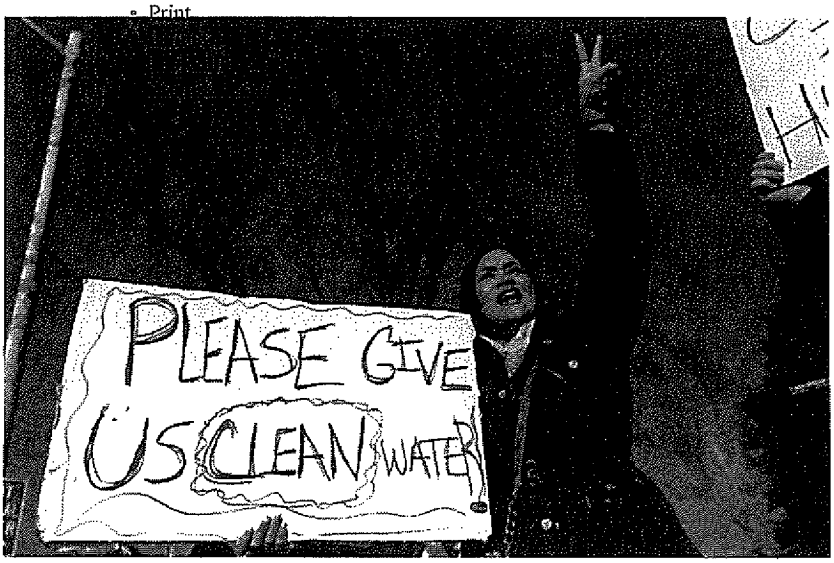
Some Flint residents complain of skin problems from water



In this photo taken on Tuesday, Jan. 13, 2015, Gina Reynolds, a University of Michigan Flint student majoring in social work, chants "clean water is a human right," at cars passing by during a small protest over the conditions of the Flint water system in Downtown Flint, Mich. 2 Comments

FLINT- Some Flint residents are complaining that the city's water is causing skin problems for some children.

Hundreds of people turned out Tuesday to discuss Flint's water quality at a meeting with the mayor and city council members. Flint resident Qiana Dawson said her 4-year-old and 2-year-old have broken out in rashes because of the water, resulting in high doctor's bills.

"You all need to work with me on money," she said.

LeeAnne Walters said her 3-year-old, who has a compromised immune system, has been suffering from skin problems after bathing in the water.

"We got bad water," said City Councilman Eric Mays, who hosted the meeting. "If you buy a bad product, you return it for a refund."

The meeting was held hours after demonstrators gathered outside Flint City Hall to protest water quality and rising bills, The Flint Journal reported .

The city insists the water is safe.

Flint Mayor Dayne Walling said officials needs to focus on how to improve the water.

"I'm talking with people about water every single day," Walling said. "We need to work together as a community, with the cooperation of the state and federal government, to fix this issue."

Issues with the city's water supply emerged after Flint stopped buying water from Detroit's water department. Flint officials this month said they were dealing with elevated levels of a disinfection byproduct.

Flint switched from using Lake Huron as its drinking water source in April. The city plans to use the Flint River as its water source until the end of 2016, when the Karegnondi Water Authority expects to complete construction of a new Lake Huron water pipeline.

Some want Flint to switch back to using Detroit's water.

Walling has supported the decision by state-appointed emergency manager Darnell Earley to hire a consultant to correct the treatment of water from the Flint River. Gov#Rick Snyder on Tuesday announced that Earley would be put in charge of the struggling Detroit Public Schools district.

Earley said last week that going back to Detroit water was cost prohibitive and that the city "can ill-afford to switch course."

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

City of Flint Did Not Meet Treatment Requirements

Our water system was recently found to be in violation of a drinking water standard. Although this incident was not an emergency, as our customers, you have a right to know what happened and what we are doing to correct this situation.

We routinely monitor for the presence of drinking water contaminants. Samples were collected for total trihalomethanes (TTHM) analysis from eight locations on a quarterly basis (May 21, August 21, and November 20 of 2014). The average of the results at **ANY** of the eight locations must not exceed the maximum contaminant level (MCL) for TTHMs, otherwise our water system exceeds the Maximum Contaminant Level (MCL). The standard for TTHMs is 80 ug/L. The location reporting the highest TTHM level was 99 ug/L; thus, our water system exceeds the TTHM MCL.

What should I do?

- There is nothing you need to do unless you have a severely compromised immune system, have an infant, or are elderly. In that case, you may be at increased risk and should seek advice about drinking water from your health care provider.
- You do not need to boil your water or take other corrective actions. If a situation arises where the water is no longer safe to drink, you will be notified within 24 hours.

What does this mean?

This is not an emergency. If it had been an emergency, you would have been notified within 24 hours.

People who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous system, and may have an increased risk of getting cancer.

What is being done?

We are currently working on solutions to correct the problem. We anticipate resolving the problem in 2015.

For more information, please contact Mr. Brent Wright or Mike Glasgow at 810-787-6537 or the Water Plant at 4500 North Dort Highway, Flint, MI 48505.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

This notice is being sent to you by the City of Flint.

CERTIFICATION: F1 S3 WSSN: 02310

I certify that this water supply has fully complied with the public notification requirements in the Michigan Safe Drinking Water Act, 1976 PA 399, as amended, and the administrative rules. Reminder to water supplier: This notice/ certification must be sent to the DEQ.

City warns of potential health risks after Flint water tests revealed too much disinfection byproduct

Ron Fonger | rfonger1@mlive.com By **Ron Fonger | rfonger1@mlive.com**
on January 02, 2015 at 9:09 PM, updated January 17, 2015 at 10:04 AM

FLINT, MI -- The city says there's been too much disinfection byproduct in Flint's water system recently, something that -- over many years could cause liver, kidney or central nervous system problems and an increased risk of cancer.

The notice from the city says Flint water is safe to drink but warns those with "a severely compromised immune system, (who) have an infant or are elderly" that they "may be at increased risk and should seek advice about drinking water from your health care provider."

For others, there is no need to boil water or take other actions, the notice says.

"It 's been a **rocky road**," City Council President Josh Freeman said. "It's not acceptable.

"People have a reasonable expectation that they are going to have quality drinking water. This is obviously going to rattle people."

Mailed Friday, Jan. 2, the customer notices come after the state Department of Environmental Quality issued a notice of violation of the Safe Drinking Water Act for maximum contaminant levels for trihalomethanes -- or TTHM -- a group of four chemicals that are formed as a byproduct of disinfecting water.

As city water plant operators used additional chlorine to fight bacteria in the Flint water system this summer, disinfectant byproduct levels also likely increased, city officials said Friday.

Levels of TTHM have decreased since that time, and in Nov. 20, testing at eight locations showed only one that exceeded maximum contamination levels, according to the state's notice of violation.

Testing on Aug. 21 showed contaminant levels were higher than maximum levels allowed at each of the same eight locations.

"The water in our system today is not in violation" because of efforts to improve the distribution system and adjust water treatment, said Doughtery Johnson, utilities administrator at the Flint water treatment plant.

Those changes "have likely contributed in part to the reduction in TTHM levels reported in the most recent

quarter, and suggest the city may be able to achieve compliance with the TTHM standard," the state's violation notice says.

City officials released a statement Friday saying its actions "appear to have corrected ... known compliance issues with the system, including a recent temporary increase in the maximum contamination level (MCL) of trihalomethanes (TTHM)

"Both the city of Flint and the MDEQ expect the corrective measures being implemented will resolve the issue by early 2015," the statement says.

The city's recent violation for excessive disinfectant byproducts is the latest in a series of issues for the Flint water system since officials **changed the water source** pumped to homes and business from treated Lake Huron water purchased from the city of Detroit to water drawn directly from the Flint River and treated in Flint.

The use of Flint River water is expected to be temporary because the city is a partner in the Karegnondi Water Authority, which is building a new water pipeline to Lake Huron.

Once that system is put into service, something that's expected to happen by the end of 2016, Flint will be in a position to return to using lake water.

Freeman said that long-term plan remains "the right path to be on" and said the city appears to be on course to fix the problem of disinfection byproduct levels, but Councilman Eric Mays called on the City Council to hold an inquiry about drinking water quality.

"Sworn information given under oath is the only information I trust," Mays said.

Residents have complained to the council about the smell and taste of the water since Flint stopped the flow of lake water here and there were three boil water advisories in a 22-day span this summer after positive tests for total coliform and fecal coliform bacteria.

In October, **General Motors announced** that it would no longer use treated river water at its engine plant here because of fears high chloride levels would cause corrosion.

Flint Department of Public Works Director Howard Croft said that the city's aging water distribution system remains the biggest obstacle to meeting Safe Drinking Water standards but officials have also said the relatively low quality of untreated river water and the need to more carefully manage chemical treatment has also been a factor.

Croft told a City Council committee in September that river water has proven hard to treat and to keep safe because of variables that wouldn't be factors in lake water, like temperature fluctuation and rain.

But Croft said the city has made improvements to its distribution system and said additional improvements are on the way, including pipe replacements, leak detection and hydraulic monitoring.

Johnson said the size of Flint's water system, which once served more than 200,000 people and now serves about half that number, also makes keeping water fresh in distribution pipes difficult.

Stagnant water is more susceptible to contamination, officials have said.

Flint will remain in violation of the Safe Drinking Water Act until every test site in the city has acceptable levels of disinfectant byproducts, Johnson and Croft said.

The next round of testing is scheduled to take place in February.

Lower TTHM levels put Flint in compliance with Safe Drinking Water Act

Ron Fonger | rfonger1@mlive.com By **Ron Fonger | rfonger1@mlive.com**
on September 03, 2015 at 3:17 PM

FLINT, MI -- The city is no longer in violation of the federal Safe Drinking Water Act because the level of total trihalomethanes in water samples collected last month has fallen, the Michigan Department of Environmental Quality says.

The DEQ notified the city of the test results in a letter Wednesday, Sept. 2, ending eight months of the city under a violation of the act. The city will no longer have to send water customers warning notices about TTHM levels.

"Creative measures by the city have been successful in achieving compliance with this standard," reads the letter from Michael F. Prysby of the DEQ. "These measures have included replacement of anthracite filter media with granular activated carbon as well as the optimization of water treatment plant and distribution system processes and operations as recommended through operational evaluations conducted by the city.

"It is important that the city continue to follow these recommendations in order to limit disinfection byproduct formation and maintain compliance (with state requirements)," the letter says. "While (requirements have) now been met at all eight compliance sampling sites, an individual TTHM concentration above (80 parts per billion) was measured at one location ... in August 2015."

The location of the highest TTHM test in August was at Salem Housing, 3216 King Boulevard, which registered 90 ppb. Flint's violation of the federal law was the result of the annual average of TTHM above 80 ppb at a minimum of one of the eight testing locations.

City officials have said they expected improved TTHM levels after the installation of the new **$1.6 million carbon filter** this summer.

"The city of Flint is continuing to improve its water system, including both the areas of treatment and distribution," Mayor Dayne Walling said in a news release issued by the city Thursday, Aug. 3.

TTHM is a colorless, odorless byproduct of chlorinating water with high levels of total organic carbon. The city began having problems managing TTHM after it began using the Flint River as its water source in April 2014.

In past notices mailed to Flint water customers, the city has warned that drinking water with excess amounts of TTHM can pose increased health risks for those with a compromised immune system, the elderly, pregnant women and infants.

The good news on TTHM comes the day after researchers at Virginia Tech published an online report, saying tests show Flint **drinking water is "very corrosive"** and is "causing lead contamination in homes."

A statement from Walling on the lead issue says the city will work with the DEQ on a plan aimed at reducing the corrosive effects of water on older transmission pipes and home service lines.

Scary: Leaded Water and One Flint Family's Toxic Nightmare

July 9th, 2015, 11:28 PM

Like 2 61

Curt Guyette is an investigative reporter for the ACLU of Michigan. His work, funded by a grant from the Ford Foundation, focuses on emergency management and open government. He writes regularly for Michigan Democracy Watch Blog. (http://www.aclumich.org/democracywatch/index.php/entry/hard-to-swallow-toxic-water-in-a-toxic-system)

By Curt Guyette

It took a while for LeeAnne Walters to realize the full impact of the number: 13,200.

LEEANN WALTERS

Walters—a stay-at home mom with four sons and a husband in the Navy—had seen other numbers reflecting the quality of drinking water at her Flint home that were devastating. But 13,200? She'd never seen anything like this.

The city had tested her water twice in this past March and both times found dangerously high levels of lead—104 parts per billion (ppb) and 397 ppb, respectively.

Those numbers filled her with dread, because they meant her family had been exposed to high levels of a terribly toxic heavy metal that put her children's future in jeopardy.

But it was the result of a third test of the tap water in her home, performed by independent experts at Virginia Tech University, that most stunned Walters.

"It took a while for me to wrap my head around it," said Walters.

The VT researchers discovered lead levels in Walters' water reached a jaw-dropping 13,200 ppb—more than twice the amount at which the U.S. Environmental Protection Agency classifies

water as hazardous waste.

"When I saw those numbers I was shocked," said Virginia Tech professor Marc Edwards, a former MacArthur Fellow and respected authority on corrosion in drinking-water systems, who oversaw the tests.

Edwards played a key role in discovering and addressing the problem of corroded water pipes and lead in Washington, D.C. during the early 2000s, in what's described as the *worst* contamination crisis ever seen in a major *urban* water system.

In terms of lead levels, the Walters family's numbers eclipsed even the worst D.C. homes.

"I have never in my 25-year career seen such outrageously high levels going into another home in the United States," said Edwards. "This was literally hazardous-waste levels."

But the condition of Walters' tap water raises a much more far-reaching question: Since the city moved away from Detroit's water system and began pumping water from the Flint River, how many other families have been put at risk by the city's questionable testing procedures and handling of the water supply?

The Walters family surely isn't alone in dealing with the threat of lead-laced drinking water. Flint has tens of thousands of homes that are a half-century old or older, built at a time when water service lines were typically made of lead.

And according to various experts, including an EPA water-quality specialist, the city's actions are only exacerbating the threat.

"What the public needs is accurate information," explained Miguel Del Toral, regulations manager for the Ground Water and Drinking Water Branch of the EPA's Region 5.

Instead, the city is utilizing testing measures that almost ensure that worst-case scenarios such as the one facing the Walters family escape detection, asserted Del Toral in an internal EPA memo provided to the ACLU of Michigan.

Compounding the threat is what Del Toral describes as the continued inability of officials to adequately treat water coming into people's homes from the Flint River.

"I don't want to scare people unnecessarily," said Del Toral in a phone interview from his home in Chicago. "But there is absolutely a problem in Flint that needs to be addressed right away."

During his interview with the ACLU of Michigan, Del Toral said he was willing to go on the record with his concerns, but that he was doing so as a private citizen, not as a representative of the EPA.

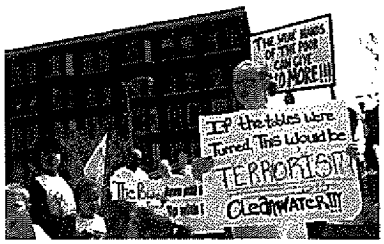
EPA rules, he said, required that such interviews be routed through the agency's public affairs people. But he's willing to speak out nonetheless, he said, because of the potential harm to the public is so great.

WATERING DOWN THE TESTS

Perhaps the most vexing problem in all of this is the contamination caused by the city's decades-old network of lead and iron pipes—a problem directly connected to the switch to river

water, and the city's failure to adequately treat it.

Under the U.S. Environmental Protection Agency's rules, if lead reaches a level of 15 parts per billion in water, the source of the problem must be identified and corrected.



Residents protest the poor water quality

In early March, after months of requests (and only after Walters had received a doctor's note raising concerns about problems with the water), the city finally conducted a test. It found lead levels of 104 ppb the first time. A second test recorded a level of 397 ppb.

Blood tests, taken after those water-sample numbers were reported, revealed that one of her children, a four year old, had lead poisoning.

The news was devastating, said Walters, and the concern it creates for her child's future is haunting.

"Lead can affect almost every organ and system in your body," according to the EPA's web site. "Children six years old and younger are most susceptible ... Even low levels of lead in the blood of children can result in: behavior and learning problems; lower IQ and hyperactivity; slowed growth; and hearing problems."

Those dangers made Walters all the more determined to get her questions answered.

For one thing, she wanted to know why residents were being instructed to "pre-flush" water lines before drawing samples that would be tested by the city

After much searching, she found Del Toral at the EPA's Region 5 in Chicago. He explained to her that her instincts were right, and that she had good cause to be concerned about the way testing was being done.

"The practice of pre-flushing before collecting compliance samples has been shown to result in the minimization of lead capture and significant underestimation of lead levels in drinking water," wrote Del Toral in an internal memo dated June 24.

Del Toral went on to say that the city's testing methods were a "serious concern" because they "could provide a false sense of security to the residents of Flint regarding lead levels in the water." As a result, he warned, residents could fail to take the necessary precautions to protect their families from lead in the drinking water.

Virginia Tech's Edwards completely agrees with Del Toral's assessment.

"The net effect of a 'pre-flush' is to greatly reduce the likelihood of detecting lead in samples collected ... that would normally be present in the consumers drinking water," Edwards wrote in an email. "I have long maintained that the practice should be banned, as it artificially lowers the amount of lead detected in samples versus typical consumer exposure."

Asked about these concerns, city spokesman Jason Lorenz offered the following email reply: "While I cannot directly respond to Mr. Del Toral's remarks without first contacting the EPA

Region 5 office, I can say that the City of Flint follows all the testing procedures and schedules as required by the U.S. EPA."

He added that the Michigan Department of Environmental Quality (MDEQ) endorses the city's sampling method. The MDEQ did not respond to phone calls and e-mails seeking its comments on the controversy.

Del Toral contended in an interview that what Flint's doing is actually exploiting a "loophole" in the law.

"From a technical standpoint, there's no justification for the way Flint is conducting its tests," Del Toral said. "Any credible scientist will tell you [the city's] method is not the way to catch worst-case conditions."

There is no legitimate reason for the city's methodology, said Del Toral.

During his interview with the ACLU of Michigan, Del Toral said he was willing to go on the record with his concerns, but that he was doing so as a private citizen, not as a representative of the EPA.

EPA rules, he said, required that such interviews be routed through the agency's public affairs people. But he was willing to speak out nonetheless, he said, because of the potential harm to the public.

FLUSHING OUT REAL ANSWERS

It was Del Toral who, after determining that the lead problem plaguing the Walters family was coming from outside their home, connected LeeAnne with Edwards at Virginia Tech.

Instead of taking a single sample after a line had been "pre-flushed" under the city's direction, Edwards instructed Walters to collect a series of samples from water that had been allowed to sit in the service line long enough to accurately reflect levels the family could be exposed to under normal use.

(Meanwhile, that same service line, dug up and replaced after the sample collection, was found to be made of lead in one section and iron in another.)

Edwards tested the water and discovered that the lead contamination ranged from 200 ppb to the 13,200 ppb figure that stunned LeeAnne Walters—and should likewise shock many others.

Given the age of much of Flint's infrastructure, Edwards agrees with Del Toral's assessment that the test results they found at the Walters home amount to an alarm going off, and others in the city need to pay attention.

"I do not see any reason why there would not be serious problems occurring in at least some other Flint homes," said Edwards.

In 1986, the U.S. Safe Drinking Water Act was amended to prohibit the use of lead pipes in public water systems. Every house built before that is potentially at risk, said Edwards. About half of Flint's roughly 40,000 homes are at least 50 years old.

Making things worse is the fact that the high levels of chlorine being used to treat Flint's dirty river

water lead to the creation of a carcinogenic byproduct know as total trihalomenhanes, or TTH?M. To keep TTHM levels down, the city is adding ferric chloride. The trouble is, that additive can also accelerate the corrosion of lead and iron pipes.

Adding yet another layer to the problem is something the city is *not* doing.

According to Del Toral, Flint should be adding corrosion-control chemicals designed to help keep lead and copper in pipes from leaching into drinking water. Doing so is required by federal regulations, wrote Del Toral in his memo.

"To our knowledge, that is inaccurate," said Flint spokesman Lorenz. "Before the plant was placed in operation, the City (and our engineering firm) had numerous discussions with DEQ personnel and inquired if corrosion-control chemicals – typically phosphates --needed to be included in the treatment process. The use of these chemicals was not required or mandated."

What's indisputable is this:

Flint's water contained corrosion-control chemicals until April 2014, when Flint's ties to the Detroit water system were severed. Flint officials hailed that changeover as a cost-cutting move for a city facing a financial crisis so severe it had been placed under the control of a state-appointed emergency manager.

Discontinuing the use of the anti-corrosion chemicals allowed toxic scale built up on the insides of pipes over the past decades to be released into water flowing into people's homes, explained Del Toral.

In his memo, Del Toral warned: "The lack of mitigating treatment is especially concerning as the high lead levels [that result] will likely not be reflected in the City of Flint's compliance samples due to sampling procedures used…"

In other words, at the same time the city is exacerbating the problem, it's conducting tests that will probably fail to identify the true extent of the threat.

Del Toral described the situation as a "major concern."

"In the absence of any corrosion control treatment, lead levels in drinking water can be expected to increase," he warned in his memo.

The EPA offered Flint officials the use of agency experts to help get the situation under control, said Del Toral, but added that, to his knowledge, the city has so far declined all help.

LeeAnne Walters said that when she asked why city officials weren't taking the EPA's offer of assistance, she was told, "We don't need it."

Flint spokesman Lorenz, on the other hand, maintained that "the city continues to work closely with the MDEQ and the EPA Regional Office."

As for Walters's family, that the city has finally replaced the service line leading to their home, and lead levels have dropped below the 15 ppb EPA action level.

The problem now, she said, is that water currently coming out of her tap tinged yellow and smells of rotten eggs. City officials have given her no explanation as to the possible cause of that.

It is just one more in a long list of questions that need to be addressed.

"What we need," said Walters, "are more answers."

But it's not just answers the people of Flint require.

They also need solutions. And, as Del Toral's EPA memo emphasizes, they need them immediately.

Corrosive Impact: Leaded Water & One Flint Family's T...

Lead leaches into 'very corrosive' Flint drinking water, researchers say

Ron Fonger | rfonger1@mlive.com By **Ron Fonger | rfonger1@mlive.com**
on September 02, 2015 at 5:41 PM, updated September 03, 2015 at 9:01 AM

Flint Journal file photo

FLINT, MI -- Flint drinking water is "very corrosive" and "causing lead contamination in homes," researchers from Virginia Tech University reported online Wednesday, Sept. 2.

"On a scientific basis, Flint River water leaches more lead from plumbing than does Detroit water," the report concludes. "This is creating a public health threat in some Flint homes that have lead pipe or lead solder."

The Virginia Tech report comes as students there, overseen by Professor Marc Edwards, are in the final days of testing water collected from 300 sample kits distributed to Flint residents.

On Monday, Aug. 31, the researchers reported 42 percent of 120 initial samples from Flint had lead levels that were more than 5 parts per billion, "which suggests a serious lead-in-water problem, according to our experience and criteria."

Virginia Tech was initially contacted by a Flint resident who had concerns about lead in **Flint water**. It has been working with citizen groups in Flint such as Water You Fighting For.

Twenty percent of the first samples also exceeded the U.S. Environmental Protection Agency lead action limit of 15 ppb, the report said.

The EPA requires water systems like Flint's to collect tap samples from sites that are more likely to have plumbing materials containing lead.

If more than 10 percent of samples exceed 15 ppb, then water systems are required to take action, including steps to optimize corrosion control treatment.

Lead is a toxic metal that was used for many years in products found in and around homes, according to EPA.

"Even at low levels, lead may cause a range of health effects, including behavioral problems and learning disabilities," EPA's website says. "Children 6 years old and under are most at risk because this is when the

brain is developing."

The Virginia Tech report on Flint River water comes two days after representatives of three organizations delivered more than 26,000 online **petition signatures to Mayor Dayne Walling**, demanding the city end its use of the Flint River and **reconnect the city to the Detroit water system**.

The petition language says high lead levels are one reason the city should no longer use the river as a drinking water source.

Walling and Department of Public Works Director Howard Croft issued statements in response to questions about lead in Flint water Wednesday after Croft declined to discuss the issue in a news conference Tuesday.

Flint spokesman Jason Lorenz said the two would not comment further Wednesday.

"The city of Flint is currently in compliance with the safety mandates of the Michigan Department of Environmental Quality and continues to work with them to stay in compliance with all safety and quality standards," Croft's statement said. "We have also been in constant contact with Virginia Tech, sharing information as it becomes available."

Walling, who has supported Flint's continued use of the Flint River as a drinking water source, said, "Lead can be a concern in communities with older public and private infrastructure.

"The city of Flint has offered free and independent testing to residents since spring, and I encourage people to use this service if they have questions," Walling's statement said.

Edwards, a professor of civil and environmental engineering, said the elevated lead levels he has seen in Flint tap water are tied to a corrosive water source that contains about eight times more chloride than Detroit water does.

"Chloride is generally considered to be very corrosive to iron. For instance, chloride present in road salts applied in the winter causes iron in cars and bridges to rust," the Virginia Tech team's website says.

"This could be a huge public health problem. ... The Flint water just ate the pipe up," Edwards said of the testing he has overseen so far.

In the testing, researchers took copper pipe pieces joined with lead solder inside them, according to the report, which says lead solder is probably present in plumbing systems of many Flint homes built before 1986.

Lead solder-copper pipe test pieces were placed in containers filled with water from Detroit and Flint in the experiment, according to the report.

"If it were me, I would not be using (Flint River water) for cooking or drinking unless I had it tested for lead," said Edwards, who previously mounted a six-year campaign that succeeded in forcing the U.S. Centers for Disease Control and Prevention to admit it had misled the public about the risk of lead in the Washington, D.C., area's drinking water, according to The Washington Post.

"Bottled or filtered water (is what I would use for) children under 6 years old or if I was pregnant," he said.

Brad Wurfel, communications director for the state Department of Environmental Quality, said the preliminary water testing results from Virginia Tech don't jibe with two separate rounds of testing during the past year by the city.

That testing indicated "Flint drinking water meets state and federal safe drinking water standards," Wurfel said.

Wurfel said lead levels detected in testing are not the result of water containing lead when it leaves Flint's treatment plant. But he said the state "has requested Flint optimize its water treatment to further limit exposure to lead from plumbing in homes."

The concerns about lead are the latest challenge for the Flint water system since the city started using the Flint River to replace Lake Huron water sold by the city of Detroit in April 2014.

Since the switch, the city has been plagued by issues such as water main breaks and boil water advisories because of bacteria and has been in violation of the Safe Drinking Water Act because of high levels of total trihalomethanes (TTHM), a byproduct of chlorinating river water.

The Rev. Allen Overton, who hand-delivered petitions to Walling on Monday, asking that city officials reconnect the Flint water system to Detroit, said Wednesday that the Virginia Tech experiment is more evidence Flint is not using the best quality of water available.

"We have a major health issue here, (and) they are not being honest with the citizens of Flint," Overton said.

City Council President Josh Freeman said the city has been willing to provide customers with free water testing and has taken action — such as installing a new $1.6 million filtration system — to address problems such as TTHM.

Councilman Eric Mays said, as more water testing is done, it becomes clearer that Flint should be negotiating with Detroit for a new, short-term water contract as work continues on the Karegnondi Water Authority pipeline.

The pipeline, a partnership between the city and Genesee County, is expected to bring untreated Lake Huron

water to Flint at some point in 2016.

"They are trying to make the water safe by trial and error," said Mays, who called Flint's water situation "a disgrace."

Home (http://flintwaterstudy.org/) Test Update: Flint River water 19X more corrosive than Detroit water for Lead Solder; Now What?

Test Update: Flint River water 19X more corrosive than Detroit water for Lead Solder; Now What?

September 11, 2015 (http://flintwaterstudy.org/2015/09/test-update-flint-river-water-19x-more-corrosive-than-detroit-water-for-lead-solder-now-what/) Siddhartha Roy (http://flintwaterstudy.org/author/flintwaterstudy/) Articles (http://flintwaterstudy.org/category/articles/), Research Updates (http://flintwaterstudy.org/category/research-updates/)

We are now three weeks into our laboratory experiment w.r.t. testing the relative corrosivity of Flint River water versus Detroit water (http://flintwaterstudy.org/2015/09/flint-rivers-water-is-very-corrosive-to-lead-and-causing-lead-contamination-in-homes/). As the test continues, it becomes a more accurate measure of the relative corrosivity of the two waters. We previously noted, that it would be expected that Flint River water would be much more corrosive than Detroit water, due to its higher chloride content.

Experiment: When we visited Flint, we took pieces of copper pipe joined with lead solder (old solder is 50% lead by weight (http://www.copper.org/environment/water/e_p_lead.html)) inside them. Lead solder is probably present in the plumbing of many Detroit/Flint homes built before 1986 when it was banned from use in drinking water systems (http://www.copper.org/environment/water/e_p_lead.html). We put the lead solder-copper pipe test pieces in 250 mL containers, and filled them with the following three waters:

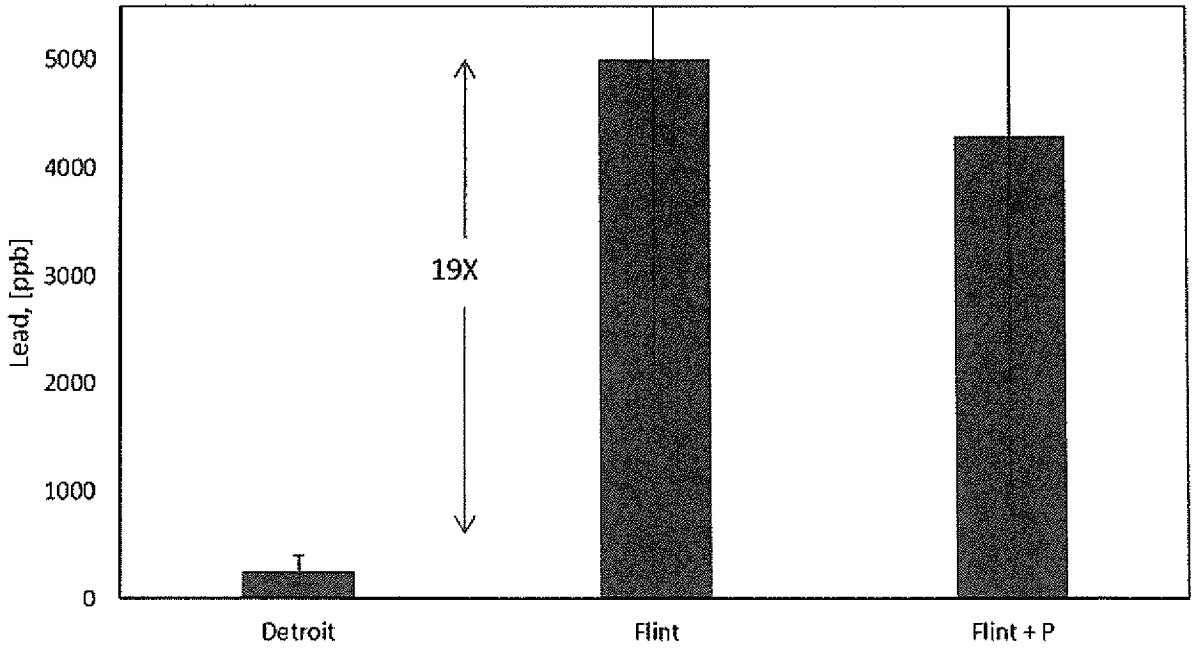
Test 1) Detroit water

Test 2) Current Flint River water

Test 3) Current Flint River water with orthophosphate (a typical corrosion inhibitor (http://www.lenntech.com/products/chemicals/water-treatment-chemicals.htm#Corrosion%20inhibitors))

Test 3 was conducted, to see if ***adding orthophosphate to Flint River water would stop lead corrosion.*** About 50% of water companies in the U.S. add orthophosphate to their water to control lead corrosion, but it is not currently added to Flint River water.

Results and Observations:



(http://i2.wp.com/flintwaterstudy.org/wp-content/uploads/2015/09/update.png)

Figure 1 – Data from Week 3 comparing lead corrosion in Detroit water (left), current Flint water (middle), and Flint water with orthophosphate (right)

From the data shown above in Figure 1, it is clear that Detroit water is much less corrosive to lead solder than the Flint River water. **On average, Detroit water is 19 times (or 19X) less corrosive than the Flint River water currently in use.** That is, the current Flint River water leaches 19X more lead to the water than Detroit water. This explains why the lead in Flint's water in our survey, is so high, (http://flintwaterstudy.org/information-for-flint-residents/results-for-citizen-testing-for-lead-300-kits/)even when it was low before when Detroit water was being used.

We can actually still see the high lead in the Flint River water test by eye (i.e. as white particles suspended in the water (http://flintwaterstudy.org/2015/09/flint-rivers-water-is-very-corrosive-to-lead-and-causing-lead-contamination-in-homes/)). Lead levels in our test with Flint River water, were slightly above hazardous waste levels (5000 ppb), which is still lower than the worst levels of lead we detected in the

home of Flint resident Lee-Anne Walters (http://flintwaterstudy.org/2015/08/hazardous-waste-levels-of-lead-found-in-a-flint-households-water/).

Orthophosphate still does not seem to help stop lead leaching in Flint River water, which is also consistent with expectations based on experiments in high chloride water (http://www.sciencedirect.com/science/article/pii/S0010938X11000382). There is a slight improvement, but even with phosphate, Flint River water has 16 times more lead compared to the same condition using Detroit water. We will continue to run these tests, but at present it does not seem like orthophosphate will provide a quick answer to the very high lead levels in Flint water.

Conclusion: On a scientific basis, Flint River water leaches more lead from plumbing than does Detroit water as predicted before (http://flintwaterstudy.org/2015/08/why-is-it-possible-that-flint-river-water-cannot-be-treated-to-meet-federal-standards/). **This is creating a public health threat in some Flint homes that have lead pipe or lead solder. Unfortunately, adding orthophosphate corrosion inhibitor to the Flint River water, does not solve the lead problem.**

PRACTICAL IMPLICATIONS

We believe, that in the weeks and months ahead, MDEQ and Flint will be forced to admit they failed to protect public health as required under the Federal Lead and Copper Rule. The question that will then be asked is "What can be done to protect residents?"

Step 1: Issue Scientifically Sound Advice.

The first step is to admit that **the water in Flint is not safe for cooking or drinking** (http://flintwaterstudy.org/information-for-flint-residents/results-for-citizen-testing-for-lead-300-kits/)— a fact that MDEQ still denies. According to MDEQ statements provided to reporter Ronald Fonger this week, which were presented to us for comment, MDEQ's Brad Wurfel asserts that:

> ***"the issue here isn't Flint's water source or water plants. It's the high number of older homes with lead pipes and lead service connections....Folks who have concerns should get a water specialist to take a look at their home and see what they need to do to achieve peace of mind, because lead and copper are home plumbing problems that no water source can eliminate entirely."***

We note that this is the exact same position that MDEQ and the city took months ago, after Lee-Anne Walters' child was lead poisoned from exposure to high lead in Flint water (http://www.abc12.com/home/headlines/Flint-mother-said-the-water-gave-her-son-Lead-poisoning-324496551.html). After MDEQ and the City blamed Ms. Walters home plumbing for the problem, an EPA water specialist did come to her home and inspected her plumbing. His finding: There were no lead plumbing sources in her home (http://www.aclumich.org/sites/default/files/file/EPAWaterReport062415.pdf). How does that finding, provide Ms. Walters and other Flint residents, with "peace of mind?"

Likewise, during our sampling events in Flint homes (http://flintwaterstudy.org/information-for-flint-residents/results-for-citizen-testing-for-lead-300-kits/), we are finding very high lead in other homes with modern lead free plumbing, which again points to city owned lead pipes and corrosive water as the problem.

On the basis of these facts, we consider MDEQ's position to be both unscientific and irresponsible, and we stand by our recommendations to Flint consumers, that they immediately reduce their exposure to high lead in Flint's water by implementing protective measures when using tap water for drinking or cooking.

Step 2. Implement Corrosion Control.

The second step will ultimately require some sort of corrosion control treatment to reduce lead in Flint water. Three options are possible as detailed below:

1. **Switch back to the non-corrosive Detroit water.** It is our opinion, based on years of experience, that Flint's lead levels would drop markedly in about one month.
2. **Add orthophosphate to Flint River water.** As indicated in this work, orthophosphate will not reduce lead leaching from all lead plumbing sources. On the basis of our extensive experience, we would only expect modest improvements to water lead levels if orthophosphate was added.
3. **Wait for KWA pipeline.** If orthophosphate was added to water from the KWA pipeline, it would be about the same corrosivity as Detroit water (Option A). In that case, Flint residents will have to live with the very high lead in their water, until at least one month after the pipeline is connected.

Politicians and residents will ultimately have to look at which of the above options is best for Flint, after weighing feasibility and costs.

Lead levels in Flint water spiked after switch to river, state records show

Ron Fonger | rfonger1@mlive.com By **Ron Fonger | rfonger1@mlive.com**
on September 19, 2015 at 5:50 AM, updated September 19, 2015 at 7:59 AM

Flint Journal file photo

FLINT, MI -- City officials insist their own testing shows Flint water is **safe** and within federal guidelines for lead.

But those same tests also show lead levels have been rising since the city began using the Flint River for water 16 months ago.

The results of Flint's testing for lead since 1992, released by the state Department of Environmental Quality to The Flint Journal-MLive, show 10 percent of homes sampled in the city's most recent testing contained 11 parts per billion or more of lead, with six of 69 samples exceeding the federal lead limit of 15 ppb.

Those are the highest lead levels measured in Flint by the city in more than 20 years, the state data shows.

In contrast, the city's tests of Lake Huron water from Detroit for one 10-year period -- from June 2001 until September 2011 -- resulted in just one of 155 samples registering higher than 15 ppb of lead.

Flint began treating river water in April 2014 after Detroit terminated an expired contract for selling water to the city. The cutoff came after Flint joined Genesee County to form the Karegnondi Water Authority, which is building a new pipeline to Lake Huron, a project that's expected to be completed sometime next year.

City and state officials have pointed to their own testing as evidence that Flint water is safe and under the 15 ppb limit, but have said little about the lead level drifting up.

Marc Edwards, who is supervising separate water **testing in Flint by Virginia Tech University**, said there's no mistaking the pattern.

"The Flint River -- based on the chemistry -- has an obvious propensity for lead to be released to water," Edwards said. "There should have been red lights flashing (when the city began using the river in April 2014) -- knowing that if you put that water into Flint's system without corrosion control, you're going to see a massive lead release."

That release is what Edwards' testing has shown as 10 percent of homes sampled by students and faculty from Virginia Tech have had lead levels of at least 25 ppb.

Since the testing started, Mayor Dayne Walling announced Flint would speed up development of a plan for reducing corrosiveness of city water and called for $10 million in state funds to begin replacing lead and lead solder in water service lines and plumbing.

Flint Department of Public Works Director Howard Croft would not attribute higher lead levels to the river alone, but said the source of the water is one variable as is the amount of time water is stagnant in pipes.

"Lead is in there. It's always been there," Croft said. "We would like there to be no lead, (but) I'm happy how aggressively we are responding" to what the city has.

Steve Busch, Lansing and Jackson district supervisor in the DEQ's office of drinking water and municipal assistance, said lead testing results vary in many areas and a shift doesn't necessarily show Flint River water is more susceptible to higher lead levels than lake water.

"We see numbers fluctuate with the same treatment and the same water," Busch said. "We have levels go up and down from monitoring round to monitoring round."

Lead is a toxic metal that was used for many year in products found in and around homes, according to the U.S. Environmental Protection Agency. Even at low levels, lead may cause health effects such as behavioral problems and learning disabilities.

Current regulations for lead in water began in 1992 and require a limited amount of testing to measure the degree to which lead leaches into tap water after flowing through lead service lines and lead solder in home plumbing.

If more than 10 percent of tap water samples from water systems exceed 15 ppb, the water system can be required to take steps like making water less corrosive or replacing lead service lines.

Since the EPA announced its lead and copper rule in 1991, Flint has collected 33 samples every six to 36 months but the number of tests increased after the city changed its water source to the river,

according to state data.

State records show 100 samples were collected from Flint in the last six months of 2014, showing two sites with readings of more than 15 ppb of lead and 10 percent of homes registering at 6 ppb or more.

From January until June this year, the city collected just 69 samples, a reduction that was allowed because Flint's population had dropped below 100,000, Busch said.

The last time testing by the city showed a higher percentage of water samples above 11 parts per billion was 1992, immediately after new lead and copper rules went into effect.

In that case, the city of Detroit took five years to develop a plan to better control corrosion and lead levels and brought lead levels down from a high of 15 ppb in 10 percent of samples taken in Flint.

Flint pediatricians raise alarm about lead levels in city water

By SARAH HULETT (/PEOPLE/SARAH-HULETT) • SEP 24, 2015

Support for Michigan Radio is provided by

The water in Flint is likely poisoning kids.

That's what pediatricians in the city say, after looking at lead levels in young children before and after the city switched the source of its drinking water from the Detroit water system to the Flint River.

Listen
3:28

There's a long list of complaints about Flint's water. But physicians are really concerned about this one.

"My research shows that lead levels have gone up. I cannot say it's from the water, but that's the thing that has happened," said Dr. Mona Hanna-Attisha, a pediatrician with Hurley Children's Hospital.

Hanna-Attisha says she decided to look into blood-lead levels after researchers from Virginia Tech found elevated lead levels in tap water due to the corrosive nature of the river water.

She analyzed blood test results of 1,746 children age five and younger from Flint, and 1,670 non-Flint children. Before the switch, 2.1% of Flint children had elevated blood lead levels. After the switch, that rate jumped to 4%. By comparison, the rate for non-Flint children went from .6% to 1%, which Hanna-Attisha says is statistically insignificant.

She calls the city's response to water quality problems "inadequate," and says precautions need to be taken immediately.

"Because the impact of not doing anything will haunt us for years to come," says Hanna-Attisha, citing interventions like special education, lost productivity, and incarceration costs associated with high lead levels. "The cost will be astronomical in decades to come. So we cannot wait until this year or next year. We have to think five years from now, ten years from now."

Hanna-Attisha and other physicians are urging the city to issue an advisory about how to minimize exposure to lead in the water. The county health department says it's drafting that advisory now.

The news about the elevated lead levels did not surprise Lee Anne Walters. She found out her son had alarmingly high lead levels in April of this year.

"I kept talking to the doctors, trying to figure out why he wasn't growing," says Walters. "He was 27 pounds at four years old. His hair was thinning, breaking out in rashes."

Walters says her son would get a rash when he took baths. There would be a line on his body that corresponded with where the bath water ended. Above it, his skin was fine. Below it, where his skin was underwater, he'd get a rash.

"The doctors in the city gave me a hard time testing my kids," says Walters. "I took them out the city to a dermatologist down in Brighton, who ran the test and called me personally to tell me that he did have lead poisoning and anemia from the lead poisoning, and he's having speech problems."

It turns out the rash was probably from a chlorine byproduct the city had to dump into the river water to kill the E. coli that had made people sick the summer before.

People knew that chemical – it's called TTHM – was a problem. But lead wasn't on many people's radar until a guy named Marc Edwards came to town.

"I want them to take responsibility. I want them to quit poisoning their citizens."

Edwards is a researcher from Virginia Tech. His tests of Flint tap water found lead levels in some homes that were higher than federal regulators allow – and a lot higher than the city found in the tests it conducted. He says the river water is so corrosive it's eating the lead from old pipes and solder.

"That's why we are actually asking for funding to help with infrastructure," said Flint City Administrator Natasha Henderson. "It's not a secret that the city is very financially distressed."

Henderson and other city officials say they're working with state and federal regulators to get a handle on the problem.

But they're quick to point out that the city's own tests show it's in compliance with the Safe Drinking Water Act.

But activists say they don't trust how the city arrived at that conclusion, and point to the Virginia Tech results as evidence that the city has been conducting flawed testing.

"I want them to take responsibility," says Lee Anne Walters, the mother whose son has experienced health problems since the switch. "I want them to quit poisoning their citizens."

Let's be clear...this situation is at least partly a result of massive cuts in state revenue sharing, which led the city to take dramatic steps to cut its costs...and now people are paying the price. But hey, we cut taxes at the state level (and our per cap income is still in the bottom 15 in the nation).

Allison MacArthur-Ruesink •

This has nothing to do with Cost Cuts. The MDEQ is rife with corruption. perhaps the "employee" who had oversight of this facility was also hired and promoted based upon a family connection with a member of the Water Division's "Hot Tub Club" instead of experience and education!? I complained about the problems as far back as the early 2000's, even to Governor Grandholm's husband via Reading for Leading. Nothing was corrected !! Employees who speak out are harassed mercilessly and even worse as in my case. When I did not voluntarily retire after being asked 3x by MDEQ's Jon E. Russell, he conspired and fabricated a case to get rid of me!! I took a polygraph from Forensic Polygraph Services (Mr. Neil Myers) to prove I was telling the truth

but Michigan's corrupt Attorney General Bill Schuette and his equally corrupt Assistant AG Joseph Yung-Kung Ho (P-77390) have denied me any measure of Justice!! It is not a coincidence that the Judge involved with my case Thomas Wilson Jackson County Michigan used to work for the AG's Office. Everything was filed in a timely manner!! The MDEQ have even refused my receiving copies of my OWN PERSONNEL FILE! This is Michigan's way of saying "Thanks for 30 years of Service" They pulled this BS 65 days before my 55th birthday so they could deny my collecting my Retirement Benefits before age 60. Does someone have to die before the Bureaucracy cleans its own house?! Read "Well of Lies" about how inept and unqualified public servants who are unqualified or just plain corrupt, can injure innocent people!!

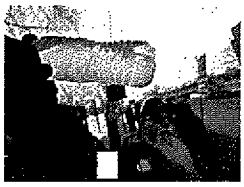
Doctor: Lead seen in more Flint kids since water switch

By Robin Erb, Detroit Free Press 6:44 p.m. EDT September 25, 2015

Number of Flint children with lead poisoning jumps after Flint water switch, says researcher.



(Photo: Ryan Garza, Detroit Free Press)

Flint's ongoing water woes are now associated with an immediate and irreversible danger — possible lead poisoning of some of the city's children, according to a review of blood test results by a Hurley Children's Hospital pediatrician.

"I was hoping not to find anything, but what we found ... is concerning," said Dr. Mona Hanna-Attisha who also leads the pediatric residency program at Michigan State University's College of Human Medicine.

"This is not something you mess around with," she said. "Our population already has so many issues from poverty, from unemployment, from violence."

State officials say their own review of blood test results have not shown the same increase that Hanna-Attisha found. Moreover, water tests have similarly shown lead within federally accepted levels, they say.

Hanna-Attisha examined results from blood samples of Genesee County children taken both before and after the city ended its water contract with the Detroit Water and Sewerage Department (http://www.dwsd.org/)and began pulling water from the Flint River.

The number of Flint children with elevated blood-lead levels — 5 micrograms per deciliter or more — jumped from 2.1% in the 20 months prior to Sept. 15, 2013, to 4.0% between Jan. 1 and Sept. 15 this year. In certain ZIP Codes, the change was even more troubling, she said — jumping from 2.5% of the children tested to 6.3%.

Blood is often drawn by pediatricians as part of routine lead-level testing, especially among children who are on Medicaid. That gave Hanna-Attisha 1,746 test results from Flint children to compare against 1,640 results from elsewhere in Genesee County. Children in Genesee County outside of Flint showed no significant increase in blood-lead levels.

Health officials have said no lead levels are safe (http://www.cdc.gov/nceh/lead/). Lead can lead to serious developmental problems, reducing a child's IQ and causing serious behavioral and emotional problems. Though levels can fall in individuals over time, the damage is permanent.

If Hanna-Attisha's analysis is correct, this upward trend in Flint interrupts years of progress in reducing dangerous blood-lead levels.

State data show that the percentage of children with elevated blood lead levels have been falling for years. In fact in 2013, 3.6% of Flint children younger than 6 had elevated blood-lead levels, compared with the state-wide rate of 3.9%.

Though Hanna-Attisha's review didn't try to determine cause, "we can't think of another reason" for the trend other than the change in Flint's water source.

The review is sure to ratchet up tension in Flint.

In 2014, city officials ended the city's contract (/story/news/local/michigan/2015/01/22/water-woes-latest-hit-flint/22193291/) with the Detroit Water and Sewerage Department (http://www.dwsd.org/), saying that water costs were too high. They opted instead to pull from the Karegnondi Water Authority, which is building a system to supply Genesee County with water pulled from Lake Huron. In the long run, this will mean lower water costs, officials have said.

But until the new system comes online in 2016, Flint is temporarily pulling water from the Flint River. Since it made the switch, residents have complained that the water smells, is discolored and makes them sick.

Soon after the switch, tests indicated the presence of coliform bacteria, which can suggest the presence of other disease-carrying pathogens. The water was then treated with disinfectants, and city officials maintain the water is safe.

The question is not that whether there is a higher level of lead in water from the Flint River — it's that river water may be more corrosive as it travels through lead pipes on residential properties and in homes, said Brad Wurfel, a spokesman for the Michigan Department of Environmental Quality. About 15,000 of the 40,000 Flint customers have lead pipes connecting to the city system, he said.

But he said testing has shown that lead levels in the Flint water system — both before and after the switch in 2014 — have been under the acceptable limit of 15 parts per billion during every three-year testing cycle since 1992. Additionally, two rounds of supplemented tests since the system switch put

lead levels at 6 parts per billion and then at 11 parts per billion — a change that Wurfel said fits in line with previous fluctuations.

Congressman Dan Kildee, a Flint Democrat, called state and local testing "lackluster."

For one thing, Flint residents collect samples, and there are concerns that there are too few samples and that they represent only some parts of the city. And Wurfel confirmed that about 60 bottles of water samples were turned in by citizens in the last round of testing, even though 200 bottles were sent out.

In the best of circumstances — with enough sampling and previous clean tests of water — citizen sampling might be adequate. But, in Flint — where there's a major change in the system that some residents say have led to health problems, "it seems to be a much higher standard would apply," Kildee said.

In addition to water testing, Wurfel a said state public health officials have reexamined results of blood-lead level testing among Flint children. In short, that data doesn't show the same upward trend that Hanna-Attisha's found, he said.

Wurfel said environmental officials aren't taking the matter lightly, and they realize the water system is in "dire" need of an overhaul. They've requested a meeting with U.S. Environmental Protection Agency authorities to "review protocols" to make sure the state's testing is adequate.

"Lead is serious. Lead builds up. Lead effects children. It's not something we take lightly," he said. "We're confident with what we've done, but we know there are concerns."

Angela Minicuci, a spokeswoman for the Michigan Department of Health and Human Services, any increase in the past year in blood-lead levels among Flint children is attributed to predicable seasonal spikes.

In the year preceding the change in the water system, 95 Flint children younger than 16, or 2.4% of those tested, had elevated blood-lead levels, according to state data. The following year, 123 children, or 3.2%, of those tested had elevated blood-lead levels.

There is "cause for concern in Flint," but it cannot be attributed to the water, she said.

Free Press staff writer Kristi Tanner contributed to this report.

Lead's toll (https://www.nlm.nih.gov/medlineplus/ency/article/002473.htm) on children:

Lead can affect many parts of the body, and is most harmful when there is repeated exposure, even to small amounts. Even low levels of lead exposure can harm a child's mental development, and the problems worsen as blood-lead levels get higher.
The younger the child, the more harmful the exposure; unborn children are the most vulnerable, according to the National Institutes of Health.

Among possible complications:

- Behavior or attention problems
- Failure at school
- Hearing problems
- Kidney damage
- Reduced IQ
- Slowed body growth

Very high levels of lead may cause vomiting, a staggering walk, muscle weakness, seizures, or coma.

High amount of lead found amid Flint children while switching waters

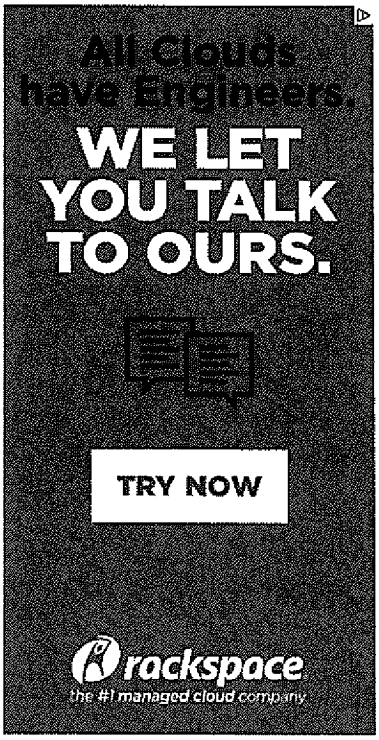
SEPTEMBER 27, 2015 BY DAVID BRYAN IN HEALTH 0 COMMENT

t's exhausting to know the resounding yawn that appears to have emanated .from the governor's workplace, following information that an growing share of Flint children have been lead poisoned after a change within the metropolis's water provide.

A spokeswoman for the Michigan Division of Well being and Human Providers despatched a Free Press knowledge analyst a chart she claimed would refute a report issued by a Hurley Medical Heart researcher, who discovered that because the metropolis began pumping water from the Flint River final April, the share of Flint youngsters with elevated blood-lead ranges has greater than doubled in some ZIP codes.

In reality, the state's information helps the Hurley researcher's declare — the variety of children with lead poisoning had been falling in Flint and throughout the state, till the water change. Now it is rising.

A spokeswoman for Gov. Rick Snyder wrote in an e-mail that the Hurley knowledge had been "spliced and diced," a suggestion that it's one thing apart from correct — though the state's personal knowledge bolsters the Hurley report.



And officers throughout the administration have hastened to insist that Flint's water is protected and to recommend that though printed reviews say Michigan Division of Environmental High quality information present elevated lead ranges in Flint's water, there's no motive to suspect that has prompted extra Flint children to undergo from lead poisoning. And thus far, none of it has it spurred them to motion.

However here is the scenario: There's extra lead in Flint's water than there was. And extra Flint youngsters have lead of their blood, one thing that results in severe, irreversible behavioral and developmental issues.

The way it occurred

The Metropolis of Flint determined in 2013 to affix the brand new Karegnondi Water Authority, together with Genesee, Sanilac and Lapeer counties. That system will not be full till 2016. Within the interim, the town — below former emergency supervisor Darnell Earley — opted to pump its water from the Flint River, as a substitute of constant to buy it from the Detroit Water and Sewerage Division — partly, state officers say, as a result of DWSD deliberate to lift its charges for a brief-time period contract. Town thought-about mixing Lake Huron and Flint River water, however finally selected to tug water from the Flint River alone. Genesee County, in distinction, will proceed to buy its water from DWSD whereas the brand new system is below building.

Researchers say that Flint River water, extra corrosive than the Lake Huron water pumped by the Detroit Water and Sewerage Division, is leaching lead from the town's ageing infrastructure into the water provide.

The town, and its residents, need assistance. Within the close to time period, residents — particularly residents with formulation-fed infants, whose diets are composed virtually fully of water — residing in poverty want help to buy bottled water or filtration programs. And town wants to think about its lengthy-time period choices, particularly, whether or not to reconnect to DWSD till the Karegnondi system is full.

That would not be a easy course of. Former Flint EM Darnell Earley, now EM for Detroit Public Colleges, wrote in an e-mailed assertion that he was not concerned within the determination to make use of river water, though it occurred throughout his tenure. He was additionally EM when a 9-mile part of pipe was bought to Genesee County, a call he wrote was within the works earlier than his appointment, which means the town cannot reconnect to the Detroit system with out the cooperation of Genesee County.

Neither is the upper value of shopping for water from DWSD — about $1.5 million a month — within the metropolis's price range, Flint Mayor Dayne Walling mentioned. The town, which emerged from state oversight this yr, would want the approval of its transitional advisory board to extend its water price range.

Flint, by the way in which, is broke.

U.S. Rep. Dan Kildee and state Senate Majority Chief Jim Ananich, each Flint Democrats, have pledged to deliver monetary and sensible help to the district.

For now, Walling mentioned, Flint's water therapy plant will start so as to add anticorrosive brokers to the Flint River water, which can take weeks to affect the water provide.

If I lived in Flint, I might be mad. If I had been a Flint mum or dad, with a little one who'd spent the final 12 months and a half ingesting lead-contaminated water, I might be in despair.

We're speaking a few public well being disaster — one that would have been prevented.

Whose fault is it?

Throughout their tenures, emergency managers are the last word authority within the cities they serve.

And so the accountability for Flint's water lies, finally, with Snyder, and the emergency managers he appointed — and it's Snyder who should come to Flint's rescue. Walling says Flint's residents want funds for instant aid, however that the town wants grants to begin to improve its growing older, lead-ridden water infrastructure.

Snyder hasn't hesitated to nominate or retain emergency managers in struggling cities throughout the state, a stance the Free Press Editorial Board has largely supported, with one caveat: Emergency managers need to make issues higher.

That's the premise on which the emergency supervisor legislation is based. Cities are the creation of the state. The state has a accountability to look after the well being and welfare of its residents, and typically, cities face challenges not fixable on the native degree. In these instances, the state should step in.

That is actually the case in Flint, which has suffered from the identical lack of inhabitants — and tax base — as Detroit, however with fewer property with which to leverage a passable consequence.

In these circumstances, the Free Press editorial board has argued, the state has a accountability to behave, to revive some fiscal stability, and thus service supply and high quality of life for residents.

That is the catch.

It would be straightforward to stability any metropolis's finances: Lay off all of the cops, promote all of the ambulances, liquidate town parks. However that would not make life higher for residents. That is the steadiness emergency managers should be conscious of — value financial savings versus high quality of life. Spending cuts versus service supply. A metropolis's backside line cannot be revenue-pushed.

That is the evident weak spot within the emergency supervisor legislation, and it on full show in Flint.

Snyder spokeswoman Sara Wurfel stated the state signed off on the swap on the behest of Walling and the Flint Metropolis Council, and solely "with severe reservations."

That is not precisely how Walling remembers it.

"I didn't assist it come what may," he mentioned. "It wasn't my resolution. I had lots of issues about it that I raised internally, however the funds was in place ... I had loads of considerations about it, however when it was determined that was the choice ... I didn't protest."

When the Flint Metropolis Council voted this 12 months to reconnect to the Detroit water system, then-emergency supervisor Jerry Ambrose known as its resolution "incomprehensible": "Water from Detroit isn't any safer than water from Flint," Ambrose stated, as reported within the Flint Journal.

It is fairly clear that is not true. It isn't clear what anybody from the State of Michigan is ready to do about it.

Sixteen months in the past, Earley and Walling celebrated the town's departure from DWSD, elevating glasses of Flint River water, ready to toss them again, with a toast that strikes a hole word at present: Here is to Flint.

Notice of Requestor's Right to Seek Judicial Review

You are entitled under Section 10 of the Michigan Freedom of Information Act, MCL 15.240, to appeal this denial to the Mayor or to commence an action in the Circuit Court to compel disclosure of the requested records if you believe they were wrongfully withheld from disclosure. If, after judicial review, the court determines that the city has not complied with MCL 15.235 in making this denial and orders disclosure of all or a portion of a public record, you have the right to receive attorneys' fees and damages as provided in MCL 15.240. *(See back of this form for additional information on your rights.)*

Signature of FOIA Coordinator: Althea Jones **Date:** 9-14-15

FREEDOM OF INFORMATION ACT (EXCERPT)
Act 442 of 1976

Opt-Out:

15.240.amended Options by requesting person; appeal; actions by public body; receipt of written appeal; judicial review; civil action; venue; de novo proceeding; burden of proof; private view of public record; contempt; assignment of action or appeal for hearing, trial, or argument; attorneys' fees, costs, and disbursements; assessment of award; damages.
Sec. 10.
(1) If a public body makes a final determination to deny all or a portion of a request, the requesting person may do 1 of the following at his or her option:

(a) Submit to the head of the public body a written appeal that specifically states the word "appeal" and identifies the reason or reasons for reversal of the denial.

(b) Commence a civil action in the circuit court, or if the decision of a state public body is at issue, the court of claims, to compel the public body's disclosure of the public records within 180 days after a public body's final determination to deny a request.

(2) Within 10 business days after receiving a written appeal pursuant to subsection (1)(a), the head of a public body shall do 1 of the following:

(a) Reverse the disclosure denial.

(b) Issue a written notice to the requesting person upholding the disclosure denial.

(c) Reverse the disclosure denial in part and issue a written notice to the requesting person upholding the disclosure denial in part.

(d) Under unusual circumstances, issue a notice extending for not more than 10 business days the period during which the head of the public body shall respond to the written appeal. The head of a public body shall not issue more than 1 notice of extension for a particular written appeal.

(3) A board or commission that is the head of a public body is not considered to have received a written appeal under subsection (2) until the first regularly scheduled meeting of that board or commission following submission of the written appeal under subsection (1)(a). If the head of the public body fails to respond to a written appeal pursuant to subsection (2), or if the head of the public body upholds all or a portion of the disclosure denial that is the subject of the written appeal, the requesting person may seek judicial review of the nondisclosure by commencing a civil action under subsection (1)(b).

(4) In an action commenced under subsection (1)(b), a court that determines a public record is not exempt from disclosure shall order the public body to cease withholding or to produce all or a portion of a public record wrongfully withheld, regardless of the location of the public record. Venue for an action against a local public body is proper in the circuit court for the county in which the public record or an office of the public body is located has venue over the action. The court shall determine the matter de novo and the burden is on the public body to sustain its denial. The court, on its own motion, may view the public record in controversy in private before reaching a decision. Failure to comply with an order of the court may be punished as contempt of court.

(5) An action commenced under this section and an appeal from an action commenced under this section shall be assigned for hearing and trial or for argument at the earliest practicable date and expedited in every way.

(6) If a person asserting the right to inspect, copy, or receive a copy of all or a portion of a public record prevails in an action commenced under this section, the court shall award reasonable attorneys' fees, costs, and disbursements. If the person or public body prevails in part, the court may, in its discretion, award all or an appropriate portion of reasonable attorneys' fees, costs, and disbursements. The award shall be assessed against the public body liable for damages under subsection (7).

(7) If the court determines in an action commenced under this section that the public body has arbitrarily and capriciously violated this act by refusal or delay in disclosing or providing copies of a public record, the court shall order the public body to pay a civil fine of $1,000.00, which shall be deposited into the general fund of the state treasury. The court shall award, in addition to any actual or compensatory damages, punitive damages in the amount of $1,000.00 to the person seeking the right to inspect or receive a copy of a public record. The damages shall not be assessed against an individual, but shall be assessed against the next succeeding public body that is not an individual and that kept or maintained the public record as part of its public function.

Dear FOIA coordinator,

This letter is a request for records under the Freedom of Information Act, MCL 15.231 et seq.

The records I am requesting are:

1. All documents the City of Flint, or its agents, has in its possession, including correspondence, related to any waivers, permits or applications to use the Flint River as a source for water and/or drinking water for the City of Flint or any other municipality or municipal entity.
2. All documents the City of Flint, or its agents, has in its possession, including correspondence, related to any communications between the Michigan Department of Environmental Quality, or its agents, and/or the Michigan Department of Treasury, or its agents, regarding any waivers, permits or applications to use the Flint River as a source for water and/or drinking water for the City of Flint or any other municipality or municipal entity.
3. All documents the City of Flint has in its possession, including correspondence, related to any communications between the City of Flint of Treasury, or its agents, and the Office of the Governor of the State of Michigan, or its agents, regarding any waivers, permits or applications to use the Flint River as a source for water and/or drinking water for the City of Flint or any other municipality or municipal entity.

I am enclosing a check in the amount of $20 as a good faith deposit to cover a portion or all of the cost of these items. If the amount exceeds $20, please contact me by phone at 810-223-7034, to discuss the balance and the basis for the amounts charged beyond $20. If the amount is less than $20 please refund the balance to this office.

Sincerely,

Phil Phelps

EXHIBIT P

Keith,
Just got this email while we were on the phone. The DEQ must have talked to Flint and decided that since Flint is not turning over documents that they are not going to either after they they both told me that they had documents to share.

Thanks,
Phil

Flushing, MI 48433

)ear Mr. Phelps:

SUBJECT: Request for Disclosure of Official Files – **Executive Division and Water Resources Division**

This notice is issued in response to your request for information under the Freedom of Information Act, 1976 PA 442, as amended (FOIA), received on September 8, 2015. You have requested the following information: "Any waivers, permits or applications to use the Flint River as a source for water and/or drinking water for the City of Flint, etc." (FOIA 6422-15).

The purpose of the FOIA is to provide the public with access to existing, nonexempt public records of public bodies. Your request to examine or receive a copy of the documents described above is denied.

To the best of this public body's knowledge, information, and belief, the public record does not exist under the name given by the requester, or by another name reasonably known to the public body.

Under section 10 of the FOIA, the DEQ is obligated to inform you of the following:

1) Appeal this decision in writing to the Director of the Department of Environmental Quality, P.O. Box 30473, Lansing, Michigan 48909-7973. The writing must specifically state the word "appeal," and identify the basis for which the disclosure determination should be reversed. The Director of the DEQ, r his/her delegated designee, must respond to the appeal within 10 days of its receipt. Under unusual circumstances, the time for response to the appeal may be extended by 10 business days.

2) Commence a civil action in circuit court within 180 days after the date of the final determination to deny the request. If you prevail in such an action, the court is to award reasonable attorney fees, costs, and disbursements, and possible damages.

Susan Vorce, FOIA Coordinator
Department of Environmental Quality
800-662-9278

Senate Activity Report | House Activity Report

Pressure Mounts On Flint Water; Snyder Prepares Actions

A coalition of Flint and state organizations asked the U.S. Environmental Protection Agency on Thursday to order a switchover of the Flint water system with the Detroit Water and Sewerage system, in what is one of the most striking actions in the controversy. The demand came as state officials plan to announce a series of actions on Flint on Friday dealing with the water problems in the city.

One legislator - who also complained he had been denied documents from the state dealing with the switch from the Detroit system to using water from the Flint River (a state official said the wrong documents had been requested) - said there had been a general discussion, but no specifics about what Mr. Snyder might announce. **Rep. Phil Phelps** (D-Flushing) said he expected the state would provide more filters to residents to help curb lead in the water. Filters will be helpful, Mr. Phelps said, but not enough.

Governor Rick Snyder will not be at the event, to be held at Kettering University, but Flint Mayor Dayne Walling, along with Environmental Quality **Director Dan Wyant**, Health and Human Services **Director Nick Lyon**, Urban Initiatives Director Harvey Hollins and the state's chief medical officer, Eden Wells, will speak on the initiatives being pursued.

The presentation will be at 1:30 p.m.at the university's Innovation Center, 1300 Bluff Street.

The controversy over the water in Flint has grown exponentially since indications that lead levels, caused mainly by antique pipes and their connections, were elevated in children who were tested. Researchers said they could not absolutely say the elevated levels were from the water, but the measures showed the increase since the city made the switch. Also on Thursday, it was announced that the city had received donations to provide some 5,000 water filters to help contain the lead.

Prior to the discovery about elevated lead levels, the controversy over the system dealt largely with the smell and taste of the water. Flint switched from using Detroit water to drawing water from the Flint River in 2014 as the city prepared to build its own system that would draw water from Lake Huron. The switch was made largely because Flint and Detroit could not agree on a short-term contract to use the water, and the city, under a state-appointed emergency manager because of financial problems, did not want to pay the cost of Detroit water.

In a press conference on Wednesday, Mr. Snyder acknowledged that in making the switch, not all factors were probably considered.

The request for the EPA to order both the city and state to make the switch to Detroit water came with a variety of city and state groups, including the Concerned Pastors for Social Action, the Flint Water Study

Team, the Michigan Nurses Association, the NAACP-Michigan State Conference, the Natural Resources Defense Council and the Michigan branch of the American Civil Liberties Union, getting involved.

The request charged that neither the state nor Flint were doing enough to fix the problem and urged that both be ordered to immediately have Flint's water system reconnected with the Detroit system, and that city residents be provided with a free source of water that meets EPA standards.

Mr. Phelps, meanwhile, complained that the Department of Environmental Quality denied and the Department of Treasury ignored a Freedom of Information Act request for documents related to the city's switch from Detroit water to river water. Anytime there is a change in water systems of the course of water, the community has to apply to the state for that authority.

But Brad Wurfel, with the DEQ, said Flint did not have to file that application because the city had always listed the Flint River as its back-up should it need it for a water supply.

However, there are other documents that are available - to Mr. Phelps or anyone - dealing with the process the city and state took preparing for the switch, Mr. Wurfel said.

Mr. Phelps said a DEQ official contacted him and said there were documents available and that they would be sent to him. The official asked that he drop his FOIA request, Mr. Phelps said.

On the advice of his lawyers, Mr. Phelps said he did not drop the request. But he had also asked the department for any documents that might have to do with the switch. After his request was denied, he received several documents dealing with the system, but the documents were from 2007 and did not have to do with the switch.

Mr. Phelps was surprised by the refusal and was planning what steps to next take.

In terms of what the state should do to help in the situation, Senate **Minority Leader Jim Ananich** (D-Flint) told reporters after session on Thursday that he thought the state should first help with distributing filters to residents, especially those who may be most vulnerable, listing pregnant women, children, women that are nursing, those with immune system issues and the elderly among them.

"That should be done immediately," Mr. Ananich said. "I think we need to have corrosion control put in place as quickly as possible. Unfortunately, I think we need some independent, outside testers to come in and develop the confidence level that's just not there with traditional people in place. And I think we need to have a serious look at reconnecting with Detroit. I think the state needs to help us find a new source of water."

He said he would reserve judgment about how well the state has responded to the situation until after the administration makes its recommendations and remains unsure about any estimates on how much it might cost for Flint to reconnect to Detroit water.

"There's been some negotiations going on at the local level, but I think it's important to get the real cost because it's a public health issue. And I'm hopeful we'll find that. I would hope that all folks, with an issue of this magnitude, would not try to gouge a community that's been suffering the way they are," Mr. Ananich said. "I think we need to all, at the state level, make sure people are negotiating in good faith."

And Senate **Majority Leader Arlan Meekhof** (R-West Olive) said he is unsure what the state's role should be in terms of helping Flint. The Senate did, on Thursday, include a $100 placeholder to deal with Flint's water

crisis in an appropriations supplemental it passed, but that was to keep the conversation going, Mr. Ananich said (see separate story).

"I don't know that we really have a solution there yet," Mr. Meekhof said after session. "We could use revolving funds maybe. I don't think the city of Flint is in as bad of financial trouble as the city of Detroit, so if they need to bond for something, they would have assets with which to bond and maybe fix the problem. There's lots of options that are out there."

EXHIBIT R

B9 (Rev. 04-15)

STATE OF MICHIGAN
DEPARTMENT OF TREASURY
LANSING

RICK SNYDER
GOVERNOR

NICK A. KHOURI
STATE TREASURER

September 29, 2015

Mr. Phil Phelps
819 Main Street
Unit A
Flushing, MI 48433

Dear Mr. Phelps:

This notice is issued in response to your request dated September 4, 2015, which you submitted under the Freedom of Information Act (FOIA), MCL 15.231 *et seq*. Your request was received in the Department of Treasury (Department) by electronic mail on September 8, 2015. As set forth in the Department's September 15, 2015 notice, a statutory extension of time to respond was taken through September 29, 2015.

You have requested records which you describe as: 1) All documents the Michigan Department of Treasury, or its agents, has in its possession, including correspondence, related to any waivers, permits or applications to use the Flint River as a source for water and/or drinking water for the City of Flint or any other municipality or municipal entity; 2) All documents the Michigan Department of Treasury, or its agents, has in its possession, including correspondence, related to any communications between the Michigan Department of Environmental Quality, or its agents, and the Michigan Department of Treasury, or its agents, regarding any waivers, permits or applications to use the Flint River as a source for water and/or drinking water for the City of Flint or any other municipality or municipal entity; 3) All documents the Michigan Department of Treasury has in its possession, including correspondence, related to any communications between the Michigan Department of Treasury, or its agents, and the Office of the Governor of the State of Michigan, or its agents, regarding any waivers, permits or applications to use the Flint River as a source for water and/or drinking water for the City of Flint or any other municipality or municipal entity.

To the extent we understand your description, your request is denied. After a thorough search of Department records, to the best of the undersigned's knowledge, information and belief, no such records as you describe, or by any other name reasonably known to the Department, regarding any "waivers, permits or applications to use the Flint River as a source for water and/or drinking water for the City of Flint or any other municipality or municipal entity," exist in the Department of Treasury.

Opt-Out:

In an effort to be cooperative, you may wish to contact the Department of Environmental Quality as they may have records responsive to your request.

As to the denial of your FOIA request, the Department is obligated to inform you that under section 10 of the FOIA, MCL 15.240 you may do the following:

1. Appeal this decision in writing to the State Treasurer, Michigan Department of Treasury, P.O. Box 30716, Lansing, MI 48909. The writing must specifically state the word "appeal" and must identify the reason or reasons you believe the denial should be reversed. The Department must respond to your appeal within 10 days of its receipt. Under unusual circumstances, the time for response to an appeal may be extended by 10 business days.

2. File an action in the appropriate court within 180 days after the date of the final determination to deny the request. If you prevail in such an action, the court is to award reasonable attorney fees, costs, and disbursements, and possible damages.

Pursuant to section 4 of the FOIA, MCL 15.234, the Department's FOIA procedures, guidelines and written summary can be found on the Department's website at the following link: http://michigan.gov/treasury/0,4679,7-121-72699-357926--,00.html.

Sincerely,

Carla M. Robert

Rep. Phelps Files Suit Against State of Michigan, City of Flint

State, city failed to release documents sought in FOIA request

LANSING — State Representative **Phil Phelps** (D-Flushing) announced earlier today that he is filing suit against the state of Michigan and the city of Flint to force them to release public documents he requested last month under the Freedom of Information Act (FOIA).

"It's an absolute shame that I have to file suit to force our government to comply with the law," Phelps said. "I was shocked at their response, because prior to receiving the denials, officials from both the city and state had told me that not only did documents exist, but they would be happy to share them with me."

On Sept. 4 of this year, Phelps requested that the city and state turn over all documents and emails regarding the permit and application process that Flint's emergency manager was required to complete before the Michigan Department of Environmental Quality gave the go ahead to the city to start using the Flint River as its source of drinking water. Late last month, the state and the city both denied Phelps' request, saying that no such documents exist.

In March and April of 2014, officials from both the city and state were also quoted in several articles on Mlive.com, making comments about the permit application process for Flint to switch its source of drinking water from Detroit's system to the Flint River.

"I want to know what these officials knew about the safety and quality of the river water before the switch was made. Judging by their response and recent actions, it almost seems they knew a lot more than they are letting on to," Phelps said. "Flint residents deserve better than this, they deserve to know the truth about the decisions that were made, and if I have to fight this in court to get the truth, so be it."

VERIFIED FREEDOM OF INFORMATION ACT COMPLAINT

There is no other pending or resolved civil action arising out of the transaction or occurrence alleged in the Complaint against Defendant.

Keith D. Flynn

Plaintiff **PHIL PHELPS**, ("Plaintiff"), by and through his attorneys, **MILLER COHEN, P.L.C.**, for his Freedom of Information Act Complaint, states as follows:

Since Spring 2014, families in the City of Flint have been exposed to a significant threat to their health and well-being caused by the decision to switch the City's water supply from Lake Huron water to Flint River water. This decision was made by the State's appointed Emergency Manager in the name of saving money. In the process, the health and welfare of Flint residents has been carelessly jeopardized with thousands of residents being exposed to contaminants, including E.coli, disinfectant byproduct, and, most recently, lead.

This threat is the very reason why the Michigan Department of Environmental Quality (DEQ) exists—to protect the public by insisting upon compliance with federal and state environmental regulations. The DEQ is supposed to work with suppliers of water, such as the City of Flint, and approve or reject applications for permits to alter existing water systems, including changes that are made to the source of water. MCL § 325.1004(6). Part of this process requires localities to provide the DEQ with detailed technical information evaluating any impact that proposed alterations might have on the quality of water provided to the public. *Id.*

State Representative Phil Phelps issued information requests under the Freedom of Information Act (FOIA) to the Department of Environmental Quality (DEQ), the Michigan Department of Treasury, and the City of Flint. Representative Phelps wants to see if the State and City knew in advance about the potential hazards now faced by Flint residents. He wants to see what had been done to avoid this disaster. He requests documents concerning evaluations of the quality of water in the Flint River, documents specifically pertaining to the application and permit process, and other documents relating to the change in the City's water source.

In public statements, State and City officials have discussed documents addressing the change from Detroit to Flint River water as Flint's primary source of water. However, in response to Representative Phelps' FOIA requests, they now deny that such documents exist. The cleanliness of the water is a critical health and safety issue, which must be revealed to the public. The Defendants cannot make public assurances of the existence of documents, only to refuse to turn those documents over.

As a result, Representative Phelps is now forced to file this action, along with another action in the Michigan Court of Claims, seeking to disclose information that the public has the right to know. For those reasons, Plaintiff Phelps seeks an Order from this Court requiring the City to respond to Plaintiff's FOIA requests and seeking costs and attorney fees for having to file this action.

PARTIES, JURISDICTION, AND VENUE

1. This matter arises under the Michigan Freedom of Information Act, MCL § 15.231, *et seq.* ("FOIA").

2. Plaintiff Phil Phelps is the elected State Representative for the 49th State House District. His District includes part of the City of Flint.

3. Defendant City of Flint is a public body as defined in MCL §15.232(d) having custody and control of public records. The City of Flint constitutes a supplier of water for the purposes of the Michigan Safe Drinking Water Act, MCL §325.1001 *et seq.*

4. This Court has jurisdiction over the subject matter of this complaint and venue is proper in this county, pursuant to MCL §15.240(4).

GENERAL ALLEGATIONS

5. Plaintiff incorporates herein by reference each of the preceding paragraphs.

6. Pursuant to MCL § 15.233, Plaintiff, as a member of the public, has the right to inspect, copy, or receive copies of public records of a public body, including records of the City of Flint.

7. For almost fifty years, the City of Flint purchased Lake Huron water from the Detroit Water and Sewerage Department ("DWSD").

8. On June 28, 2013, ground was broken by the Karegnondi Water Authority ("KWA") to build a pipeline to distribute Lake Huron water throughout Genesee County without DWSD.

9. Construction of the pipeline is set to be completed in late 2016.

10. Every community in Genesee County remained with DWSD during the construction of the pipeline with the exception of the City of Flint.

MILLER COHEN, P.L.C.
ATTORNEYS AND COUNSELORS AT LAW
600 WEST LAFAYETTE BLVD.
DETROIT, MICHIGAN 48226-0840
(313) 964-4454

11. Darnell Earley, the Emergency Manger appointed to the City of Flint by Governor Richard Snyder under the Local Financial Stability and Choice Act, MCL §141.1541 *et seq.*, implemented the switch from DWSD water to the Flint River that took place on April 25, 2014.

THE DECISION TO SWITCH FROM DWSD WATER TO FLINT RIVER WATER

12. Prior to switching from DWSD to Flint River water, the City of Flint, in conjunction with the Michigan Department of Environmental Quality and the Michigan Department of Treasury engaged in a process to evaluate the potential of using the Flint River as Flint's primary source of water. (*Exhibit A*, 91-95)

13. Gerald Ambrose, the financial advisor to the emergency manager for the City of Flint at the time, testified that: "There was brief evaluation of whether the City would be better off to simply use the Flint River as its primary source of water over the long term. That was determined not to be feasible." (Id. at 91)

14. Mr. Ambrose went on to testify that the determination that it was not feasible was made by "the emergency management team based on conversations with the MDEQ that indicated they would not be supportive of the use of the Flint River on a long-term basis as a primary source of water." (Id.)

15. Mr. Ambrose also testified in regards to an independent study that was conducted by the State Department of Treasury as to the feasibility of changing the source of water to the Flint River. (Id. at 93-94)

16. Notwithstanding this evaluation, the City of Flint decided to move forward with changing the source of its drinking water to the Flint River until the KWA pipeline was finished.

17. In order to do so, however, the City of Flint was required by the Safe Drinking Water Act to apply for a permit to change the source of water:

(313) 964-4454

> (6) Before commencing the construction of a waterworks system or an alteration, addition, or improvement to a system, a supplier of water shall submit the plans and specifications for the improvements to the department and secure from the department a permit for construction as provided by rule. Plans and specifications submitted to the department shall be prepared by a professional engineer licensed under article 20 of the occupational code, 1980 PA 299, MCL 339.2001 to 339.2014. A contractor, builder, or supplier of water shall not engage in or begin the construction of a waterworks system or an alteration, addition, or improvement to a waterworks system until a valid permit for the construction has been secured from the department. A contractor, builder, or supplier of water who permits or allows construction to proceed without a valid permit, or in a manner not in accordance with the plans and specifications approved by the department, violates this act. A supplier of water shall not issue a voucher or check or in any other way expend money or provide consideration for construction of a waterworks system unless a valid permit issued by the department is in effect. The department may issue a permit with conditions to correct minor design deficiencies. If eligible, a supplier may request an expedited review of an application for a permit under section 4a.

MCL § 325.1004(6).

18. The Safe Drinking Water Act provides that the DEQ administers the Act and promulgates administrative rules to enforce its requirements. One of those administrative rules defines "alteration" to include "modification of, or addition to, an existing waterworks system, or portion of the system, that affects . . . the source . . . ." Admin. Rule 325.10102.

19. On the DEQ's website, the DEQ provides the application discussed above. (*Exhibit B*)

20. The application requires the submission of highly technical plans and analysis for the alteration of the Water System. (Id.)

21. Failure of a "supplier of water"—which include municipalities—to apply and receive a permit prior to alteration of a Water System violates the Act punishable by a fine of not more than $5,000.00 for each day of violation, or by imprisonment for not more than 1 year, or both. MCL § 325.1021.

22. Prior to switching to the Flint River, it was reported that the City was in the process of applying for such a permit. (*Exhibit C*)

23. On March 28, 2014, it was reported that the Michigan Department of Environmental Quality halted the City's attempt to move forward with the switch in water source without receiving the permit. (Id.) Steve Busch, the Lansing and Jackson district supervisor for the DEQ, noted that the DEQ had only received "preliminary design plans and preliminary specifications" that the agency had commented on. (Id.)

24. Howard Croft, Flint's Director of Public Works, denied the inadequacy of the plans provided noting that the City had provided "A fully engineered construction package, including all the work to be performed." (Id.) He went on to note that, "The submittal package has been under review for more than 30 days. The city has had ongoing discussions with the DEQ regarding the process and we anticipate a favorable response soon." (Id.)

25. On April 5, 2014, Emergency Manager Earley stated that the final application for the permit was filed with the DEQ noting that "We expect to have the permit early next week." (*Exhibit D*)

26. Sure enough, the very next week, the spokesman for the Department of Environmental Quality (DEQ), Brad Wurfel, was reported on April 10, 2014 as saying that the DEQ issued "a series of construction permits" noting that "They are racing to get all this work done." (*Exhibit E*)

27. The switch to Flint River water took place on April 25, 2014. (*Exhibit F*)

RESIDENTS OF FLINT ARE EXPOSED TO CONTAMINANTS AFTER THE SWITCH TO FLINT RIVER WATER

28. Since switching to Flint River water, Flint residents have been placed in jeopardy being exposed to substantial threats to their health and safety due to contaminants found in their drinking water.

29. On August 14, 2014, the water tested positive for fecal coliform bacteria, E.coli, leading the City to issue a boil water advisory. (*Exhibit G*)

30. The water once again tested positive on August 19, 2014 with boil water advisories extending into late September 2014. (*Exhibit H*)

31. On January 2, 2015, a new threat to public health and safety was identified. In an effort to eliminate the bacteria, the City increased the chlorine used in the System. Residents began complaining that the water was causing skin rashes and their hair falling out. (*Exhibit I*)

32. Then, on January 2, 2015, the City of Flint officially announced that the level of trihalomethanes (TTHMs)—a byproduct of disinfectant—was higher than the allowable amount provided for in federal law forcing the City to provide notice to residents. (*Exhibit J*)

33. Long term exposure to TTHMs can create liver, kidney, or central nervous system problems, and may increase the risk of cancer, especially amongst those who have severely compromised immune systems such as infants or the elderly. (Id.)

34. Over nine months later, the City was finally able to reduce TTHM levels to the federal limit. (*Exhibit K*)

35. Most recently, in July 2015, Virginia Tech University researchers released the results of their own independent study of Flint's water supply revealing incredibly high amounts of lead far exceeding the allowable limitations of lead content under federal law. (*Exhibit L*)

MILLER COHEN, P.L.C.
ATTORNEYS AND COUNSELORS AT LAW

DETROIT, MICHIGAN 48226-0840
(313) 964-4454

36. On September 2, 2015, the researchers at Virginia Tech released another study that compared the DWSD water to the Flint River water (*Exhibit L*) That study concluded that the natural corrosive properties of Flint River water is leaching lead from the City's aging infrastructure. (*Exhibit L*)

37. On September 24, 2015, the results of a subsequent study by Dr. Mona Hanna-Attisha, program director for the pediatric residency at the Hurley Children's Hospital at Hurley Medical Center in Flint were released finding an elevated level of lead in the blood samples of Flint children. (*Exhibit M*) Specifically, the study showed that the number of children in the City with elevated blood levels nearly doubled after the city started using the river. (Id.)

38. According to Dr. Hanna-Attisha: "What we found in our data is concerning." (Id.) Dr. Hanna-Attisha noted that "This is not something you mess around with." (Id.)

REPRESENTATIVE PHELPS SEEKS DOCUMENTS RELATING TO CHANGING THE CITY'S SOURCE OF WATER TO THE FLINT RIVER AND THE CITY AND STATE FAILED TO COMPLY

39. In response to this health crisis, Representative Phelps requested the following records from the Michigan Department of Environmental Quality, the Michigan Department of Treasury, and the City of Flint pursuant to FOIA on September 4, 2015:

1. All documents the [City of Flint/Michigan Department of Treasury/Michigan Department of Environmental Quality], or its agents, has in its possession, including correspondence, related to any waivers, permits or applications to use the Flint River as a source for water and/or drinking water for the City of Flint or any other municipality or municipal entity.
2. All documents the [City of Flint/Michigan Department of Treasury/Michigan Department of Environmental Quality], or its agents, has in its possession, including correspondence, related to any communications between the Michigan Department of Environmental Quality, or its agents, and/or the Michigan Department of Treasury, or its agents, regarding any waivers, permits or applications to use the Flint River as a source for water and/or drinking water for the City of Flint or any other municipality or municipal entity.

3. All documents the [City of Flint/Michigan Department of Treasury/Michigan Department of Environmental Quality] has in its possess, including correspondence, related to any communications between the [City of Flint of Treasury/Michigan Department of Treasury/Michigan Department of Environmental Quality], or its agents, and the Office of the Governor of the State of Michigan, or its agents, regarding any waivers, permits or applications to use the Flint River as a source for water and/or drinking water for the City of Flint or any other municipality or municipal entity.

(*Exhibit N*)

40. On September 4th, Representative Phelps had a face-to-face conversation with Howard Croft, Flint's Director of Public Works, at the Flint City Hall beginning shortly after 3:00pm and ending around 4:20pm. Representative Sheldon Neeley was also present during the meeting.

41. Both Representative Phelps and Neeley asked several questions regarding the switch to Flint River water, the permits and applications surrounding the switch, potential hold ups/delays in the switch due to DEQ's approval process, and correspondence between the City of Flint and the DEQ regarding all of the previous items.

42. Howard Croft said that they did in fact have documents related to those topics and stated that it would be no problem to share them with both Representatives.

43. On September 14, 2015, the City of Flint changed its story. In the City of Flint's formal response to Representative Phelps' FOIA requests dated September 14, 2015, the City has refused to provide those documents. (*Exhibit O*)

44. Contradicting Mr. Croft's earlier assertions as well as statements made to the press in 2014, the City of Flint asserted that no such documents exist:

> The records which you have requested do not exist under the name given by the requester or by another name reasonably known to this public body or are not retained by this public body in the performance of an official functions. This is a certification of their non-existence. No Records—Requested documents do not exist.

45. The DEQ responded on or about September 16th by telephone indicating that it was DEQ policy to provide copies of documents to members of the State Legislature free of charge and noting that there were several documents that would be sent over to Representative Phelps' office via email, but only if he withdrew his FOIA request.

46. Representative Phelps indicated that he had to contact his attorney to discuss whether he should withdraw the FOIA requests. Since that day, Representative has not received any verbal communication with the DEQ.

47. On September 28, 2015, after Representative Phelps refused to withdraw his FOIA request, the DEQ changed its tone like the City of Flint. (*Exhibit P*)

48. Brad Wurfel, the spokesman for the DEQ stated in an interview with Gongwer that "Flint did not have to file an application because the City has always listed the Flint River as its back-up should it need it for a water supply." (*Exhibit Q*)

49. Obviously, Mr. Wurfel's most recent statement ignores the statements that he, and others, made to the media prior to the switch. They all maintained that Flint was required to file an application for a permit with the DEQ and did in fact file an application that was ultimately approved by the DEQ on or about April 10, 2014.

50. Nonetheless, Mr. Wurfel indicated during that interview that "other documents . . . are available—to Mr. Phelps or anyone—dealing with the process the city and state took preparing for the switch." (Id.) To date, Representative Phelps has not received these other documents.

51. Similarly, the Michigan Department of Treasury denied Representative Phelps' FOIA request on the same grounds as the City of Flint and the DEQ on September 29, 2015. (*Exhibit R*)

52. To date, Representative Phelps' has not received the documents that he requested.

53. The public has a right to know the degree to which the State knew about or took any action to determine the potential hazards of making this switch, prior to the decision being implemented by the State-appointed Emergency Manager. It is for that reason that Representative Phil Phelps brings this suit to compel the City of Flint to provide the documents requested pursuant to FOIA.

COUNT I

VIOLATION OF THE FREEDOM OF INFORMATION ACT

54. Plaintiff incorporates herein by reference each of the preceding paragraphs.

55. Documents, such as correspondence and communications, relating to any waivers, permits or applications to use the Flint River as a source for water and/or drinking water for the City of Flint or any other municipality or municipal entity constitute public records subject to FOIA.

56. Plaintiff reasonably described the documents that he was seeking.

57. No exemption recognized under FOIA applies to Representative Phelps' requests.

58. The Defendant's denial is wholly without merit as acknowledged by the Defendant's own agents in the past. Defendant failed to perform a good faith effort to conduct a search for the requested records using methods reasonably expected to produce the requested information.

59. Hence, Defendant violated the FOIA, and for the violation, the Defendant should face all fines, costs and fees as pursuant to the FOIA statute, as well as be ordered to immediately tender the information.

60. Due to the Defendant's refusal to respond to the FOIA requests, the Defendant now bears the burden to sustain the reason for its denial. MCL §15.240(4).

61. MCL § 15.240(5) provides that actions commenced pursuant to FOIA "shall be assigned for hearing and trial and for argument at the earliest practicable date and expedited in every way.

WHEREFORE, and for the above-stated reasons, Plaintiff requests that this Honorable Court grant the following relief:

a. Order an expedited hearing as required by MCL § 15.240(5);

b. Order that the Defendant to immediately respond to the FOIA requests of Plaintiff as found in the *Exhibit N* letters;

c. Find that the Defendant made a final determination to deny the FOIA requests, and such determination was in violation of the FOIA and arbitrary and capricious. Thus, Order that the Defendant pay to Plaintiff reasonable attorney's fees, costs and disbursements, and order punitive damages of $5.00;

d. Award all other relief as this Court deems appropriate.

Respectfully submitted,

MILLER COHEN, P.L.C.

UNITED STATES DISTRICT COURT
EASTERN DISTRICT OF MICHIGAN

JOHN WELCH, JUDITH WELCH, KENNETH SPARKS, JR., CAROL SPARKS, SHERRY MURPHY, AND MARK FULKS ON BEHALF OF THEMSELVES AND ALL OTHERS SIMILARLY SITUATED, AND UNITED RETIRED GOVERNMENTAL EMPLOYEES (URGE), A MICHIGAN NONPROFIT CORPORATION,

Plaintiffs,

CASE NO: 2:12-cv-13808-AJT-MKM

vs

HON. ARTHUR J. TARNOW

MICHAEL BROWN, INDIVIDUALLY AND IN HIS OFFICIAL CAPACITY AS EMERGENCY MANAGER OF THE CITY OF FLINT, EDWARD KURTZ, INDIVIDUALLY AND IN HIS OFFICIAL CAPACITY AS EMERGENCY MANAGER OF THE CITY OF FLINT, ROBERT ERLENBECK, INDIVIDUALLY AND IN HIS OFFICIAL CAPACITY AS MANGER FOR THE CITY OF FLINT RETIREMENT OFFICE, GERALD AMBROSE, INDIVIDUALLY AND IN HIS OFFICIAL CAPACITY AS CITY OF FLINT FINANCE DIRECTOR, AND THE CITY OF FLINT,

Defendants.
_____/

The Deposition of GERALD AMBROSE, taken before me, Claudia M. Weekly, CSR-2963, on Tuesday, May 20, 2014, at 1101 South Saginaw Street, 2nd Floor Conference Room, Flint, Michigan, commencing at or about 10:17 A.M.

talking about, are you referring to the cost of the City's participation in the pipeline?

Q Both.

A I had no direct involvement in any discussions relating to the actual cost estimates for the construction of the pipeline. I was, however, involved in doing the analysis of the cost benefit to the City of participating in the Karegnondi Water Authority as compared to continuing to receive, to purchase water from the Detroit Water and Sewer System.

Q Were any other options -- did you look at any other options apart from those two or variations of those two?

A There was brief evaluation of whether the City would be better off to simply use the Flint River as its primary source of water over the long term. That was determined not to be feasible.

Q Who determined that it wasn't feasible?

A It was a collective decision of the emergency management team based on conversations with the MDEQ that indicated they would not be supportive of the use of the Flint River on a long-term basis as a primary source of water.

Q What was the reason that they gave?

A You'll have to ask them.

Q Okay. You don't recall?

A I do not recall.

Q Now, am I correct in that is actually what is happening now, for at least a short-term --

A That's correct.

Q -- the City of Flint is using its own facilities and supplying its own water through the Flint River?

A That is correct.

Q When was the possibility of using that as a long-term solution abandoned?

MR. WARREN: Do you mean the Flint River?

MR. ALEC GIBBS: Yes.

THE WITNESS: Probably sometime in FY13. I don't recall specifically.

MR. BADE: I'm just going to object to the form of the question. Abandoned by whom?

Q (BY MR. ALEC GIBBS) By the collective body that was responsible for making the ultimate decision by the City of Flint, I assume. Sometime in fiscal year 2013?

A Sometime between -- I guess sometime probably during '13, I believe, or perhaps even midway through '12.

Q Okay.

A I don't recall the specific dates.

Q But it was based on communications from the Michigan Department of Environmental Quality.

MR. WARREN: Objection; asked and answered. You can answer.

THE WITNESS: It was based on information that we received from others within the City who said that MDEQ was not supportive of a long-term use of the Flint River.

Q (BY MR. ALEC GIBBS) Who are the City of Flint sources who communicated the Michigan Department of Environmental Quality's position?

MR. WARREN: Object to lack of foundation. You can answer.

THE WITNESS: I believe it was our utilities administrator, our public works director.

Q (BY MR. ALEC GIBBS) And who are those individuals?

A Howard Croft, Daugherty Johnson.

Q Are you aware of an independent study on the feasibility of alternative plans for water supply for the City of Flint that was commissioned by the Department of Treasury?

MR. WARREN: I'm going to object to relevance. We're getting really far afield here. I'm not directing him not to answer, but hopefully this can be tied up very quickly and we can all move on.

Q (BY MR. ALEC GIBBS) I'm just asking if you're aware of the study.

A Tell me what the name of the study is.

Q I have it here. Mark this as Exhibit 5.

(Exhibit Number 5 was marked.)

Q (BY MR. ALEC GIBBS) Do you recognize this study?

A I do not recall seeing this actual document, but I am aware of the study.

Q Okay. Do you remember when this study was commissioned?

A I don't know. Apparently it was completed in February of 2013.

Q The study makes reference to a number of meetings between the City of Flint and the Department of Treasury concerning the investigation into water supply options for the City of Flint. Did you participate in any of those meetings?

A I did.

Q What meetings do you recall participating in?

A I recall one or two meetings in Lansing. I don't remember when.

Q Do you remember if one of those meetings took place in December of 2012?

A I do not recall the date.

Q Do you remember who participated in these meetings?

A I do not recall. I was in attendance with the emergency manager then Michael Brown, as I recall, or Ed Kurtz. I honestly do not recall the dates and the timing.

Q Okay. There is a reference to, if you look to Page 2 of the study, it says although it appeared that this was

a -- it references an option for the Flint water treatment plant to supply the City of Flint without being supplied from either DWSD or KWA was initially considered. The preliminary investigation evaluated the cost associated with the required improvements to the plant and the Flint River dam system. And that although it appeared that this was a viable option, Flint, in a meeting on December 20th, 2012 with the treasury, stated that the City did not want to pursue that option and it is no longer being considered.

Do you recall that being discussed in one of those meetings you referred to earlier?

A No. But that's consistent with the decision that we reached.

Q You indicated that you did participate in some of the evaluations of the cost projections at least as it concerned Flint's contribution to the pipeline.

A Flint's participation in the pipeline, yes.

Q Okay. Well, what is your understanding of what Flint's annual contributions will be over the term of years for the loan bond amounts? In other words, what are Flint's debt service payments relative to the pipeline construction going to be on an annual basis?

A The debt service only?

Q And any payments associated with the pipeline

EXHIBIT B

PERMIT APPLICATION FOR WATER SUPPLY SYSTEMS

(CONSTRUCTION - ALTERATION - ADDITION OR IMPROVEMENT) AS DESCRIBED HEREIN

Required under the Authority of 1976 PA 399, as amended

This application becomes an Act 399 Permit only when signed and issued by authorized Michigan Department of Environmental Quality (DEQ) Staff. See instructions below for completion of this application.

Municipality or Organization, Address and WSSN that will own or control the water facilities to be constructed. This permit is to be issued to: **WSSN**:	Permit Stamp Area (DEQ use only)	
Owner's Contact Person (provide name for questions): Contact: Title: Phone:		
Project Name (Provide phase number if project is segmented):	4. **Project Location** (City, Village, Township):	5. **County** (location of proje

ISSUED UNDER THE AUTHORITY OF THE DIRECTOR OF THE DEPARTMENT OF ENVIRONMENT QUALITY

cc:

Issued by: _____

Reviewed by: _____

☐ **If this box is marked see attached special conditions.**

Instructions: Complete items 1 through 5 above and 6 through 21 on the following pages of this application. Print or typ all information except for signatures. Mail completed application, plans and specifications, and any attachments to the DE District Office having jurisdiction in the area of the proposed construction.

Please Note:

a. This **PERMIT** only authorizes the construction, alteration, addition or improvement of the water system described herein and is issued solely under the authority of 1976 PA 399, as amended.
b. The issuance of this **PERMIT** does not authorize violation of any federal, state or local laws or regulations, nor doe it obviate the necessity of obtaining such permits, including any other DEQ permits, or approvals from other units c government as may be required by law.
c. This **PERMIT** expires two (2) years after the date of issuance in accordance with R 325.11306, 1976 PA 399, administrative rules, unless construction has been initiated prior to expiration.
d. Noncompliance with the conditions of this permit and the requirements of the Act constitutes a violation of the Act.
e. Applicant must give notice to public utilities in accordance with 1974 PA 53, (MISS DIG), being Section 460.701 to 460.718 of the Michigan Compiled Laws, and comply with each of the requirements of that Act.
f. All earth changing activities must be conducted in accordance with the requirements of the Soil Erosion and Sedimentation Control Act, Part 91, 1994 PA 451, as amended.
g. All construction activity impacting wetlands must be conducted in accordance with the Wetland Protection Act, Par 303, 1994 PA 451, as amended.
h. Intentionally providing false information in this application constitutes fraud which is punishable by fine and/or imprisonment.
i. Where applicable for water withdrawals, the issuance of this permit indicates compliance with the requirements of Part 327 of Act 451, Great Lakes Preservation Act.

Facilities Description – In the space below provide a detailed description of the proposed project. Applications without adequate facilities descriptions **will be returned**. SEE EXAMPLES BELOW. Use additional sheets if needed.

EXAMPLES – EXAMPLES – EXAMPLES – EXAMPLES – EXAMPLES – EXAMPLES

Water Mains	500 feet of 8-inch water main in First Street from Main Street north to State Street. **OR** 250 feet of 12-inch water main in Clark Road from an existing 8-inch main in Third Avenue north to a hydrant.
Booster Stations	A booster station located at the southwest corner of Third Avenue and Main Street, and equipped with two, 15 Hp pumps each rated 150 gpm @ 200 feet TDH. Station includes backup power and all other equipment as required for proper operation.
Elevated Storage Tank	A 300,000 gallon elevated storage tank located in City Park. The proposed tank shall be spherical, all welded construction and supported on a single pedestal. The tank shall be 150 feet in height, 40 feet in diameter with a normal operating range of 130 – 145 feet. The interior coating system shall be ANSI/NSF Standard 61 approved or equivalent. The tank will be equipped with a cathodic protection system, and includes a tank level control system with telemetry.
Chemical Feed	A positive displacement chemical feed pump, rated at 24 gpd @ 110 psi to apply a chlorine solution for Well No. 1. Chlorine is 12.5% NaOCL, ANSI/NSF Standard 60 approved and will be applied at a rate of 1.0 mg/l of actual chlorine.
Water Supply Well	Well No. 3, a 200 foot deep well with 170 feet of 8-inch casing and 30 feet of 8-inch, 10 slot screen. The well will be equipped with a 20 Hp submersible pump and motor rated 200 gpm @ 225 feet TDH, set at 160 feet below land surface.
Treatment Facilities	A 5 million gpd water treatment plant located at the north end of Second Avenue. The facility will include 6 low service pumps, 2 rapid mix basins, 4 flocculation/sedimentation basins, 8 dual media filters, 3 million gallon water storage reservoir and 6 high service pumps. Also included are chemical feed pumps and related appurtenances for the addition of alum, fluoride, phosphate and chlorine.

General Project Information – Complete all boxes below.

7. Design engineer's name, engineering firm, address, phone number, and email address:

8. Indicate who will provide project construction inspection:
☐Organization listed in Box 1.
☐Engineering firm listed in Box 7.
☐Other - name, address, and phone number listed below.

9. Is a basis of design attached?
☐YES ☐NO

If no, briefly explain why a basis of design is not needed.

10. Are sealed and signed engineering plans attached?
☐YES ☐NO

If no, briefly explain why engineering plans are not needed.

11. Are sealed and signed construction specifications attached?
☐YES ☐NO

If specifications are not attached, they need to be on file at DEQ.

12. Were Recommended Standards for Water Works, Suggested Practice for Water Works, AWWA guidelines, and the requirements of Act 399 and its administrative rules followed?
☐YES ☐NO

If no, explain which deviations were made and why.

13. Are all coatings, chemical additives and construction materials ANSI/NSF or other adequate 3rd party approved?
☐YES ☐NO

If no, describe what coatings, additives or materials did not meet the applicable standard and why.

14. Are all water system facilities being installed in the public right-of-way or a dedicated utility easement? (For projects not located in the public right-of-way, utility easements must be shown on the plans.)
☐YES ☐NO

If no, explain how access will be obtained.

15. Is the project construction activity within a wetland (as defined by Section 324.30301(d)) of Part 303, 1994 PA 451?
☐YES ☐NO

If yes, a wetland permit must be obtained.

16. Is the project construction activity within a 100-year floodplain (as defined by R 323.1311(e)) of Part 31, 1994 PA 451, administrative rules?
☐YES ☐NO

If yes, a flood plain permit must be obtained.

17. Is the project construction activity within 500 feet of a lake, reservoir, or stream?
☐YES ☐NO

If yes, a Soil and Erosion Control Permit must be obtained or indicate if the owner listed in box 2 of this application is an Authorized Public Agency (Section 10 of Part 91, 1994 PA 451) ☐ Owner is APA.

18. Will the proposed construction activity be part of a project involving the disturbance of five (5) or more acres of land?
☐YES ☐NO

If yes, is this activity regulated by the National Pollutant Discharge Elimination System storm water regulations?
☐YES: NPDES Authorization to discharge storm water from construction activities must be obtained.

☐NO: Describe why activity is not regulated:

Please call 517-241-8993 with questions regarding the applicability of the storm water regulations.

19. Is the project in or adjacent to a site of suspected or known soil or groundwater contamination?
☐YES ☐NO

If yes, attach a copy of a plan acceptable to the DEQ for handling contaminated soils and/or groundwater disturbed during construction. Contact the local DEQ district office for listings of Michigan sites of environmental contamination.

20. IF YOU ARE A CUSTOMER/WHOLESALE/BULK PURCHASER, COMPLETE THE FOLLOWING

1) Name and WSSN of source water supply system (seller) _____

2) Does the water service contract require water producer/seller to review and approve customer/wholesale/bulk purchaser water system construction plans?
☐YES ☐NO

If yes to #2, the producer/seller approval letter must be attached when submitted to DEQ.

21. **Owner's Certification** The owner of the proposed facilities or the owner's authorized representative shall complete the owner's certification. It is anticipated that the owner will either be a governmental agency (city, village, township, county, etc.) or a private owner (individual, company, association, etc.) of a Type I public water supply.

OWNER'S CERTIFICATION

I, _____ (name), acting as the _____ (title/position) fo
(print) (print)

_____ (entity owning proposed facilities) certify that this project has
(print)

been reviewed and approved as detailed by the Plans and Specifications submitted under this application, and is in compliance with the requirements of 1976 PA 399, as amended, and its administrative rules.

Signature* Date Phone

*Original signature only, no photocopies will be accepted.

PROJECT BASIS OF DESIGN – FOR WATER MAIN PROJECTS

PROJECT NAME: _____

For this PROJECT the following information must be provided per Act 399 unless waived by the Department. For projects other than water main installation, or if additional space is needed, attach separate sheet(s) with detailed Basis of Design calculations.

A. A general map of the initial and ultimate service areas
☐ Included on engineering plans ☐ Attached separately

B. Number of service connections served by this permit application _____

C. Total number of service connections ultimately served by entire project _____

D. Residential Equivalent Units (REUs) served by this permit application _____

E. Total Residential Equivalent Units (REUs) ultimately served by entire project _____

F. Water flow rates for proposed project based on REUs listed in "D' and "E" above

1. Initial design average day flow (mgd) _____
2. Initial design maximum day flow (mgd) _____
3. Total design average day flow (mgd) _____
4. Total design maximum day flow (mgd) _____
5. Required fire flows: (1) _____ gpm for _____ hours

G. Actual flows and pressures of existing system at the connection point(s) (2)

_____ gpm at _____ psi
_____ gpm at _____ psi
_____ gpm at _____ psi
_____ gpm at _____ psi

H. Estimated minimum flows and pressures within the proposed water main system (3)

_____ gpm at _____ psi

(1) Every water system must decide what levels of fire fighting flows they wish to provide. Fire flow should be appropriate for the area (residential, commercial, industrial) being served by the project. Typical fire flow rates can be obtained from the water supply, local fire dept., ISO or AWWA. The water system must then be designed to be able to provide the required fire flows while maintaining at least 20 psi in all portions of the distribution system.

(2) Flows and pressures at the connection points must be given to determine if the existing water main(s) are able to deliver water to the new service area. These numbers can be obtained from a properly modeled and calibrated distribution system hydraulic analysis or hydrant flow tests performed in the field. If more than one connection is proposed, list as needed.

(3) List what the estimated minimum flows can be expected in the proposed water mains based on estimated water demands, head losses, elevation changes and other factors that may affect flows, such as dead end mains.

State says Flint hasn't applied for permit to use river as drinking water source

A look at Flint water plant's facilities
The city plans to switch over to the Flint River as a primary drinking water source in April. *(MLive.com File Photo)*

Dominic Adams | dadams5@mlive.com By **Dominic Adams | dadams5@mlive.com**
Follow on Twitter
on March 28, 2014 at 6:30 AM, updated March 28, 2014 at 6:35 AM

FLINT, MI – Not so fast, state officials are telling Flint administrators charging toward an April 18 date to begin using the Flint River for all of the city's water needs.

The Michigan Department of Environmental Quality says it hasn't received the proper paperwork from the city. When the state does get it, a review of the application for state permission to use the river could take 30 to 45 days.

The city is switching over from buying treated water from Detroit to using the Flint River for drinking water temporarily. Once the Karegnondi Water Authority completes its pipeline from Lake Huron to Genesee County, Flint will switch to the KWA.

"In regards to the actual application, we haven't received one," said Steve Busch, Lansing and Jackson district supervisor in the DEQ's office of drinking water and municipal assistance. "We've received preliminary design plans and preliminary specifications and we've commented on those. They may be waiting until they have all the comments worked out before they submit the application."

Flint has bought treated Lake Huron water from Detroit, but that contract was terminated when Flint signed on to purchase 18 million gallons of raw water per day from the Karegnondi Water Authority. The contract termination goes into effect April 17.

The under-construction pipeline will bring raw Lake Huron water to Flint and Genesee County when it is complete by the end of 2016.

People in the city will drink Flint River water until the pipeline is complete. The Detroit Water and Sewerage

Department said it would **stop selling water to Flint and Genesee County** on its current contract on April 17, 2014. Genesee County is negotiating with Detroit for water until the KWA pipeline is flowing.

Busch said state reviews generally take between 30 and 45 days, but would not comment on if Flint would be ready to transition to river water by the time Detroit terminates the contract with the city.

"A fully engineered construction package, including all the work to be performed, has been submitted to the DEQ by the city of Flint in preparation for the transition to use of the Flint River as a temporary primary water source," said Howard Croft, Flint's director of public works, in a statement. "The submittal package has been under review for more than 30 days. The city has had ongoing discussions with the DEQ regarding the process and we anticipate a favorable response soon."

If the state hasn't approved Flint's use of river water by April 18, Busch said, the city would just continue to buy water from Detroit on a non-contract price until Flint has state OK to begin using the river.

"I don't think there is any scenario that we will just willy-nilly cut off service for Flint," said Bill Johnson, a consultant and spokesman for Detroit Water and Sewerage Department. "Negotiations are continuing."

Croft said the DEQ has been reviewing the request and asking questions throughout.

"When both sides come to an agreement and all issues have been addressed, then the permit is granted," Croft said in the statement. "Flint has been in ongoing communication with Genesee County and the DWSD to ensure that there is no interruption of water service to Flint customers. As the Mayor (Dayne Walling) said in his State of the City address 'beginning this spring, we will be using treated water from the Flint River as our temporary primary water source.' We are still on target to meet this goal."

Croft said there will be a series of public forums where residents can ask questions about the city's water transition, what that will mean for rates and others. He did not have specifics about when and where those meetings will take place.

Emergency manager says city could have permit to use Flint River water by next week

Ron Fonger | rfonger1@mlive.com By **Ron Fonger | rfonger1@mlive.com**
on April 05, 2014 at 6:00 AM, updated April 05, 2014 at 6:03 AM

FLINT, MI -- The city expects to have a state permit that will allow it to use the Flint River for drinking water by next week.

Emergency manager Darnell Earley said today, April 4, that the final application for the permit has been filed with the state Department of Environmental Quality after months of working with the state to ensure smooth sailing for the application.

"We expect to have the permit early next week," said Earley. "We are still on track to operate our treatment plant this spring."

The emergency manager's comments come after a **story in MLive-The Flint Journal** last week indicated the DEQ had not received the proper paperwork from the city for permission to use the river.

DEQ officials said in the story that the application process could take 30-45 days, but Earley challenged the idea that it will take that long and said city and state officials have been working closely in advance of submitting the final application.

The city is attempting to switch from buying treated water from the city of Detroit to using the Flint River for drinking water temporarily by mid-April.

Once the Karegnondi Water Authority completes its pipeline to Lake Huron, the city has committed to switching back to using water from Lake Huron and the KWA again

Earley said he expects to transition from Detroit water to Flint River water by April 17, the date Detroit officials have set for terminating the existing arrangement between the two cities.

"We don't think there will be a lag" between those dates, he said.

Earley said he has a contingency plan if the switch to the Flint River isn't made by April 17. Detroit Water

and Sewerage officials have said they don't intend to attempt to shut off the water supply to the city under any circumstances.

Flint gets final permit approvals from state to use Flint River for drinking water

Ron Fonger | rfonger1@mlive.com By **Ron Fonger | rfonger1@mlive.com**
on April 10, 2014 at 4:00 PM, updated April 10, 2014 at 4:10 PM

FLINT, MI -- Bottoms up, Flint.

The state of Michigan has issued the **permits needed** for the city to begin using the Flint River for drinking water, a major step toward ending water purchases from the city of Detroit as early as next week.

"They've got a series of construction permits" that were issued Wednesday, April 10, said Brad Wurfel, a spokesman for the state Department of Environmental Quality. "They are**racing** to get all this work done."

The permits have been on Flint's to-do list since the Detroit Water and Sewerage Department said it was terminating its contract to sell water here on April 17.

That deadline was issued one year ago, and city and state water officials have been working and consulting on required upgrades at Flint's water treatment plant since.

Flint spokesman Jason Lorenz said today, April 10,that the city is still targeting April 17 as the day to shut off Lake Huron water -- treated and pumped here by DWSD -- and to turn on the intakes into the river.

Because work is still going on inside and outside the city's treatment plant, the exact time and date for the switch hasn't been set yet, Lorenz said.

Earlier this week, Flint emergency manager Darnell Earley called the city's ability to cut out the cost of water purchases from Detroit a "monumental change" for the city.

"The city of Flint will be able to control water costs," Earley said. "I'm kind of glad we're not a part of that discussion (about the future of the Detroit water system) anymore."

A consultant hired by Earley is expected to recommend new water rates during a City Council committee meeting at 5 p.m. today. The emergency manager has already said**rates will not be reduced** because of upgrades that are needed in Flint's water distribution system.

Flint officials will need that infrastructure upgrade whether they use river or lake water. City officials have signed an agreement to use Lake Huron water supplied by the Karegnondi Water Authority once the pipeline it is building is completed -- something that's expected to happen in 2016.

FLINT, MI – Mayor Dayne Walling asked for a countdown from the group of about a dozen people huddled inside a small building on Friday, April 25.

"Three, two, one," they counted, then Walling pushed a small black button.

Seconds later, a green light winked out, and that was it.

Watch the video to see Flint effectively cut its water ties with Detroit when the mayor pushes the button.

Flint will use the river until the Karegnondi Water Authority builds its pipeline to Genesee County. The $274 million project is expected to be complete sometime in 2016.

Friday's event at the Flint water treatment plant also featured Walling and other elected officials drinking Flint River water.

"It tastes like...water," said Fourth Ward Councilman Joshua Freeman after drinking a cup.

It should take about two days for the residual Detroit water to clear the city's water system before all Flint customers will be drinking treated river water.

"Water is an absolute vital service that most everyone takes for granted," Walling said. "It's a historic moment for the city of Flint to return to its roots and use our own river as our drinking water supply."

Second positive coliform bacteria test means Flint's west side water boil notice still in effect

Ron Fonger | rfonger1@mlive.com By **Ron Fonger | rfonger1@mlive.com**
on August 18, 2014 at 4:00 PM, updated January 17, 2015 at 10:28 AM

(This story has been updated to correct information about water test results in the boil water advisory area.)

Flint Journal file photo

FLINT, MI -- A second water sample in an area where residents have been told to boil their drinking water has tested positive for total coliform, meaning owners of businesses and residents there should continue to boil water until further notice -- at least until Wednesday, Aug. 19.

"We don't know yet what caused this. We don't have a smoking pistol," said Mike Prysby, an engineer with the Michigan Department of Environmental Quality.

Update: Flint officials say 'abnormal' test to blame in E. coli scare

Flint officials have ramped up testing in the boil-water area, a half-mile square area on the city's west side, since a positive test for fecal coliform bacteria on Thursday, Aug. 14.

Fecal coliform bacteria -- also known as E.coli -- can make people sick, and are a particular concern for those with weakened immune systems.

Prysby called fecal coliform bacteria in drinking water unusual, something that typically happens fewer than a half-dozen times in any given year statewide. Sometimes, doesn't happen anywhere in Michigan over a full calendar year, he said.

The second positive test for total coliform came from samples taken Saturday, Aug. 16, according to Prysby.

The U.S. Environmental Protection Agency says positive total coliform tests suggest there may be a pathway

for pathogens and/or fecal contamination to enter the drinking water distribution system.

For drinking water, total coliforms are used to determine the adequacy of water treatment and the integrity of the distribution system, according to EPA.

"The absence of total coliforms in the distribution system minimizes the likelihood that fecal pathogens are present," the agency Web site says. "Thus, total coliforms are used to determine the vulnerability of a system to fecal contamination."

Fecal coliform and E. coli are bacteria that indicate water may be contaminated with human or animal feces.

This is the area in which a boil water advisory is in effect on the west side of the city of Flint.

Microbes in these wastes can cause diarrhea, cramps, nausea, headaches, or other symptoms, and may also pose a special health risk for infants, young children, some of the elderly, and people with severely compromised immune systems, according to a news release from the city.

Flint's boil advisory is in an area bordered by Mann Hall Avenue on the north and east, Whitney Avenue on the south, and the city limits on the west.

The contamination is a concern for Sandi Blackmon, owner of Sandi's Elegant Catering on South Ballenger Highway, who said she's scrambling to keep up with her work with a boil advisory in effect.

Not only does the advisory say water for drinking should be boiled, but also water for washing dishes -- even brushing teeth.

"I'm concerned, because I'm a former culinary arts student. I know about what food-born bacteria can do ... E.coli can be deadly," Blackmon said.

Representatives of other restaurants in the busy commercial area of Balleneger and Corunna Road said they were boiling water Monday and will be until they receive an all-clear message from City Hall.

"It's inconvenient but we do it -- we do the best we can," said David Todorovsky, an owner of Atlas Coney Island.

Flint Councilwoman Vicki VanBuren, who represents the area, has another reason for concern about the boil water advisory.

"My mother lives in that area," VanBuren said. "She has a lot of health concerns (so) I took her over some bottled water and told her not to use (tap water) to drink or cook with it.

"This would concern me no matter what part of the city it was in," she said.

Council members could get more information on the water contamination and what may have caused it at committee meetings this week.

In the meantime, Prysby said there are multiple possible explanations for the contamination, including water main breaks in the area, chlorine levels that are off-kilter or a poor sample location or collection technique.

Prysby said water coming out of Flint's water treatment plant continues to meet all drinking water standards, meaning the problem is within the water distribution system.

"We haven't confirmed a reason," he said of the results, "We're still investigating further. In some situations, we never find out why."

The city is warning the people in the localized area to not drink the water without boiling it first for one minute, and letting it cool before using.

Boiled or bottled water should be used for not just drinking, but for making ice, brushing teeth, washing dishes and preparing food.

Tests positive for total coliform again in water-boil area on Flint's west side

Ron Fonger | rfonger1@mlive.com By **Ron Fonger | rfonger1@mlive.com**
on August 19, 2014 at 4:00 PM, updated January 17, 2015 at 10:25 AM

MLive file photo

FLINT, MI -- Water in a small area on Flint's west side has **tested positive** again for total coliform, and the city's boil water advisory there is continuing until at least Wednesday, Aug. 20.

Mike Prysby, district engineer for the Michigan Department of Environmental Quality, said water in the half-square-mile area tested positive for total coliform on Saturday, Aug. 16, and Sunday, Aug. 17.

Flint officials have ramped up testing in the boil-water area since a **positive test for fecal coliform bacteria** on Thursday, Aug. 14.

The boil-water area is Mann Hall Avenue on the north and east, Whitney Avenue on the south, and the city limits on the west.

Fecal coliform bacteria -- also known as E.coli -- can make people sick, and are a particular concern for those with weakened immune systems.

The U.S. Environmental Protection Agency says positive total coliform tests suggest there may be a pathway for pathogens and/or fecal contamination to enter the drinking water distribution system.

Total coliforms are used to determine the adequacy of water treatment and the integrity of the distribution system, according to EPA.

"The absence of total coliforms in the distribution system minimizes the likelihood that fecal pathogens are present," the agency Web site says. "Thus, total coliforms are used to determine the vulnerability of a system to fecal contamination."

The city of Flint**issued a statement** Monday, Aug. 18, saying "testing over the last 48 hours has shown no signs of E. coli or fecal coliform bacteria in the water," but makes no mention of the total coliform test results.

The city's statement says a sampling error is believed to be to blame for the initial abnormal test.

Prysby said the back-to-back positive total coliform tests are a "general indicator there could be more pathogenic organisms present" in water but is "not a direct indicator."

"We haven't narrowed it down to any one possibility (but) we don't play Russian roulette with public health," Prysby said of the abnormal samples and the need to continue testing.

Prysby said test results are "moving in the right direction" because there have been no additional discoveries of E. coli or fedcal coliform bacteria in water.

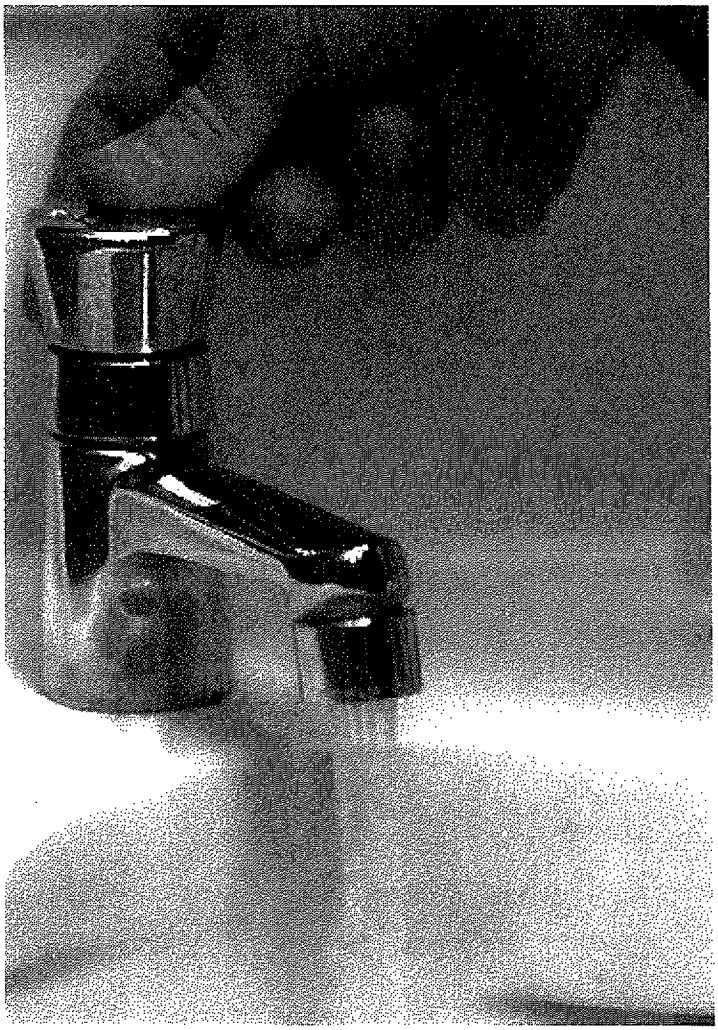
Flint issues boil water advisory for section of the city after positive test for total coliform bacteria

Ron Fonger | rfonger1@mlive.com By **Ron Fonger | rfonger1@mlive.com**
on September 05, 2014 at 6:56 PM, updated January 17, 2015 at 10:20 AM

FLINT, MI -- The city has issued a boil advisory for a portion of Flint, saying water in the area has tested positive for total coliform bacteria.



MLive file photo

The area of the advisory is bordered by Dayton Street on the north, DuPont Street on the east, the Flint River on the south, and by Lavelle Road to the Flint River on the west, the city said in a news released issued today, Sept. 5.

The latest advisory marks the **second time in less than 30 days** that residents and businesses in a part of the city have been told to boil or use bottled water for drinking, bathing, making ice, brushing teeth, washing dishes, and preparing food.

The U.S. Environmental Protection Agency says positive total coliform tests suggest there may be a pathway for pathogens and fecal contamination to enter a drinking water system.

Total coliforms are used to determine the adequacy of water treatment and the integrity of the distribution system, according to EPA.

"The absence of total coliforms in the distribution system minimizes the likelihood that fecal pathogens are present," the agency Web site says. "Thus, total coliforms are used to determine the vulnerability of a

system to fecal contamination."

Boiling water kills bacteria or other harmful organisms, according to the city's advisory.

"Total coliform bacteria are generally not harmful themselves. Coliforms are bacteria which are naturally present in the environment and are used as an indicator that other, potentially-harmful, bacteria may be present," the city's statement says.

"Usually, coliforms are a sign that there could be a problem with the treatment or distribution system (pipes). Whenever we detect coliform bacteria in any sample, we do follow-up testing to see if other bacteria of greater concern, such as fecal coliform or E. coli, are present. We did not find any of these bacteria in our subsequent testing," the statement says.

The city says it will flush the system in the boil advisory area and increase chlorine added to water.

All water testing results at the city's Water Treatment Plant have shown Flint's water, which is drawn from the Flint River, meets all Safe Water Drinking Standards when it leaves the facility.

The city says anyone with questions about the advisory or any other water issues should call 810-787-6537.

Important Information About Your Drinking Water

Tests showed coliform bacteria in the City of Flint water

Our water system recently violated a drinking water standard. Although this incident was not an emergency, as our customers, you have a right to know what happened and what we did to correct the situation.

We routinely monitor for drinking water contaminants. We took 150 samples to test for the presence of coliform bacteria during September 2014. 15 of those samples (10%) showed the presence of coliform bacteria. The standard is that no more than 5 percent of our samples may do so.

What should I do?

You do not need to boil your water or take other corrective actions. However, if you have specific health concerns, consult your doctor. People with severely compromised immune systems, infants, and some elderly may be at increased risk. These people should seek advice about drinking water from their healthcare providers. General guidelines on ways to lessen the risk of infection by microbes are available from EPA's Safe Drinking Water Hotline at 1-800-426-4791.

What does this mean?

This is not an emergency. A portion of the City was notified to boil their water at the time of the incident until it was resolved. Coliform bacteria are generally not harmful themselves.

Coliforms are bacteria which are naturally present in the environment and are used as an indicator that other, potentially harmful, bacteria may be present. Coliforms were found in more samples than were allowed and this was a warning of potential problems.

Usually, coliforms are a sign that there could be a problem with the system's treatment or distribution system (pipes). Whenever we detect coliform bacteria in any sample, we do follow-up testing to see if other bacteria of greater concern, such as fecal coliform or E. coli, are present. We did not find any of these bacteria in our subsequent testing, and further testing shows that this problem has been resolved.

What happened? What was done? On September 5, 2014, after routine and repeat samples showed the presence of total coliform, a boil water order was issued to the affected area. That area was flushed and resampled until samples were non-detect for total coliform. The boil order was lifted on September 9, 2014. Samples collected since then show that all results met acceptable limits.

For more information, please contact Mr. Brent Wright, Water Plant Supervisor, City Of Flint - DPW at 810.787.6537 ext. 3510 or Flint Water Plant - 4500 North Dort Highway, Flint, MI 48505.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

This notice is being sent to you by the City of Flint.

CERTIFICATION: F2, S3 WSSN: 02310

I certify that this water supply has fully complied with the public notification requirements in the Michigan Safe Drinking Water Act, 1976 PA 399, as amended, and the administrative rules.

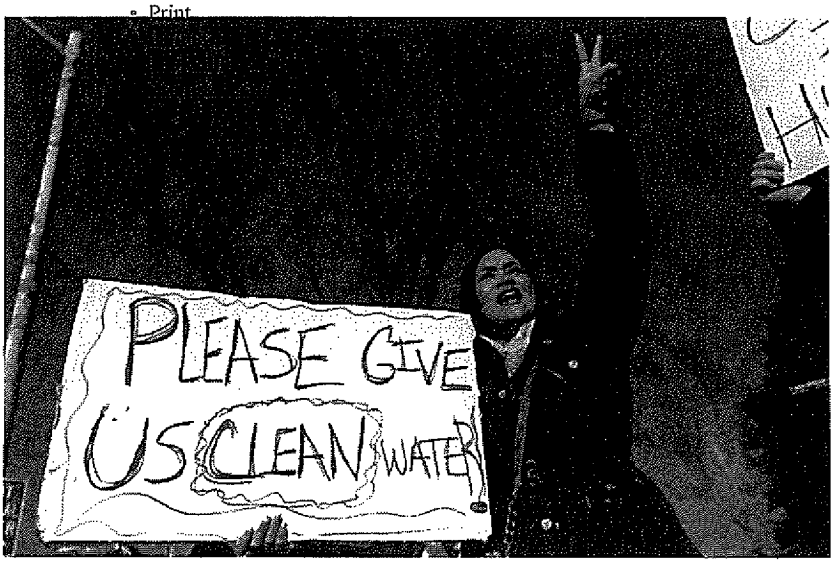
Some Flint residents complain of skin problems from water



In this photo taken on Tuesday, Jan. 13, 2015, Gina Reynolds, a University of Michigan Flint student majoring in social work, chants "clean water is a human right," at cars passing by during a small protest over the conditions of the Flint water system in Downtown Flint, Mich. (AP Photo/The Flint Journal-MLive.com, Sam Owens)

By The Associated Press

Posted: 01/14/15, 4:25 PM EST | Updated: on 01/14/2015

2 Comments

FLINT- Some Flint residents are complaining that the city's water is causing skin problems for some children.

Hundreds of people turned out Tuesday to discuss Flint's water quality at a meeting with the mayor and city council members. Flint resident Qiana Dawson said her 4-year-old and 2-year-old have broken out in rashes because of the water, resulting in high doctor's bills.

"You all need to work with me on money," she said.

LeeAnne Walters said her 3-year-old, who has a compromised immune system, has been suffering from skin problems after bathing in the water.

"We got bad water," said City Councilman Eric Mays, who hosted the meeting. "If you buy a bad product, you return it for a refund."

The meeting was held hours after demonstrators gathered outside Flint City Hall to protest water quality and rising bills, The Flint Journal reported .

The city insists the water is safe.

Flint Mayor Dayne Walling said officials needs to focus on how to improve the water.

"I'm talking with people about water every single day," Walling said. "We need to work together as a community, with the cooperation of the state and federal government, to fix this issue."

Issues with the city's water supply emerged after Flint stopped buying water from Detroit's water department. Flint officials this month said they were dealing with elevated levels of a disinfection byproduct.

Flint switched from using Lake Huron as its drinking water source in April. The city plans to use the Flint River as its water source until the end of 2016, when the Karegnondi Water Authority expects to complete construction of a new Lake Huron water pipeline.

Some want Flint to switch back to using Detroit's water.

Walling has supported the decision by state-appointed emergency manager Darnell Earley to hire a consultant to correct the treatment of water from the Flint River. Gov#Rick Snyder on Tuesday announced that Earley would be put in charge of the struggling Detroit Public Schools district.

Earley said last week that going back to Detroit water was cost prohibitive and that the city "can ill-afford to switch course."

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

City of Flint Did Not Meet Treatment Requirements

Our water system was recently found to be in violation of a drinking water standard. Although this incident was not an emergency, as our customers, you have a right to know what happened and what we are doing to correct this situation.

We routinely monitor for the presence of drinking water contaminants. Samples were collected for total trihalomethanes (TTHM) analysis from eight locations on a quarterly basis (May 21, August 21, and November 20 of 2014). The average of the results at **ANY** of the eight locations must not exceed the maximum contaminant level (MCL) for TTHMs, otherwise our water system exceeds the Maximum Contaminant Level (MCL). The standard for TTHMs is 80 ug/L. The location reporting the highest TTHM level was 99 ug/L; thus, our water system exceeds the TTHM MCL.

What should I do?

- There is nothing you need to do unless you have a severely compromised immune system, have an infant, or are elderly. In that case, you may be at increased risk and should seek advice about drinking water from your health care provider.
- You do not need to boil your water or take other corrective actions. If a situation arises where the water is no longer safe to drink, you will be notified within 24 hours.

What does this mean?

This is not an emergency. If it had been an emergency, you would have been notified within 24 hours.

People who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous system, and may have an increased risk of getting cancer.

What is being done?

We are currently working on solutions to correct the problem. We anticipate resolving the problem in 2015.

For more information, please contact Mr. Brent Wright or Mike Glasgow at 810-787-6537 or the Water Plant at 4500 North Dort Highway, Flint, MI 48505.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

This notice is being sent to you by the City of Flint.

CERTIFICATION: F1 S3 WSSN: 02310

I certify that this water supply has fully complied with the public notification requirements in the Michigan Safe Drinking Water Act, 1976 PA 399, as amended, and the administrative rules. Reminder to water supplier: This notice/ certification must be sent to the DEQ.

City warns of potential health risks after Flint water tests revealed too much disinfection byproduct

Ron Fonger | rfonger1@mlive.com By **Ron Fonger | rfonger1@mlive.com**
on January 02, 2015 at 9:09 PM, updated January 17, 2015 at 10:04 AM

FLINT, MI -- The city says there's been too much disinfection byproduct in Flint's water system recently, something that -- over many years could cause liver, kidney or central nervous system problems and an increased risk of cancer.

The notice from the city says Flint water is safe to drink but warns those with "a severely compromised immune system, (who) have an infant or are elderly" that they "may be at increased risk and should seek advice about drinking water from your health care provider."

For others, there is no need to boil water or take other actions, the notice says.

"It 's been a **rocky road**," City Council President Josh Freeman said. "It's not acceptable.

"People have a reasonable expectation that they are going to have quality drinking water. This is obviously going to rattle people."

Mailed Friday, Jan. 2, the customer notices come after the state Department of Environmental Quality issued a notice of violation of the Safe Drinking Water Act for maximum contaminant levels for trihalomethanes -- or TTHM -- a group of four chemicals that are formed as a byproduct of disinfecting water.

As city water plant operators used additional chlorine to fight bacteria in the Flint water system this summer, disinfectant byproduct levels also likely increased, city officials said Friday.

Levels of TTHM have decreased since that time, and in Nov. 20, testing at eight locations showed only one that exceeded maximum contamination levels, according to the state's notice of violation.

Testing on Aug. 21 showed contaminant levels were higher than maximum levels allowed at each of the same eight locations.

"The water in our system today is not in violation" because of efforts to improve the distribution system and adjust water treatment, said Doughtery Johnson, utilities administrator at the Flint water treatment plant.

Those changes "have likely contributed in part to the reduction in TTHM levels reported in the most recent

quarter, and suggest the city may be able to achieve compliance with the TTHM standard," the state's violation notice says.

City officials released a statement Friday saying its actions "appear to have corrected ... known compliance issues with the system, including a recent temporary increase in the maximum contamination level (MCL) of trihalomethanes (TTHM)

"Both the city of Flint and the MDEQ expect the corrective measures being implemented will resolve the issue by early 2015," the statement says.

The city's recent violation for excessive disinfectant byproducts is the latest in a series of issues for the Flint water system since officials **changed the water source** pumped to homes and business from treated Lake Huron water purchased from the city of Detroit to water drawn directly from the Flint River and treated in Flint.

The use of Flint River water is expected to be temporary because the city is a partner in the Karegnondi Water Authority, which is building a new water pipeline to Lake Huron.

Once that system is put into service, something that's expected to happen by the end of 2016, Flint will be in a position to return to using lake water.

Freeman said that long-term plan remains "the right path to be on" and said the city appears to be on course to fix the problem of disinfection byproduct levels, but Councilman Eric Mays called on the City Council to hold an inquiry about drinking water quality.

"Sworn information given under oath is the only information I trust," Mays said.

Residents have complained to the council about the smell and taste of the water since Flint stopped the flow of lake water here and there were three boil water advisories in a 22-day span this summer after positive tests for total coliform and fecal coliform bacteria.

In October, **General Motors announced** that it would no longer use treated river water at its engine plant here because of fears high chloride levels would cause corrosion.

Flint Department of Public Works Director Howard Croft said that the city's aging water distribution system remains the biggest obstacle to meeting Safe Drinking Water standards but officials have also said the relatively low quality of untreated river water and the need to more carefully manage chemical treatment has also been a factor.

Croft told a City Council committee in September that river water has proven hard to treat and to keep safe because of variables that wouldn't be factors in lake water, like temperature fluctuation and rain.

But Croft said the city has made improvements to its distribution system and said additional improvements are on the way, including pipe replacements, leak detection and hydraulic monitoring.

Johnson said the size of Flint's water system, which once served more than 200,000 people and now serves about half that number, also makes keeping water fresh in distribution pipes difficult.

Stagnant water is more susceptible to contamination, officials have said.

Flint will remain in violation of the Safe Drinking Water Act until every test site in the city has acceptable levels of disinfectant byproducts, Johnson and Croft said.

The next round of testing is scheduled to take place in February.

Lower TTHM levels put Flint in compliance with Safe Drinking Water Act

Ron Fonger | rfonger1@mlive.com By **Ron Fonger | rfonger1@mlive.com**
on September 03, 2015 at 3:17 PM

FLINT, MI -- The city is no longer in violation of the federal Safe Drinking Water Act because the level of total trihalomethanes in water samples collected last month has fallen, the Michigan Department of Environmental Quality says.

The DEQ notified the city of the test results in a letter Wednesday, Sept. 2, ending eight months of the city under a violation of the act. The city will no longer have to send water customers warning notices about TTHM levels.

"Creative measures by the city have been successful in achieving compliance with this standard," reads the letter from Michael F. Prysby of the DEQ. "These measures have included replacement of anthracite filter media with granular activated carbon as well as the optimization of water treatment plant and distribution system processes and operations as recommended through operational evaluations conducted by the city.

"It is important that the city continue to follow these recommendations in order to limit disinfection byproduct formation and maintain compliance (with state requirements)," the letter says. "While (requirements have) now been met at all eight compliance sampling sites, an individual TTHM concentration above (80 parts per billion) was measured at one location ... in August 2015."

The location of the highest TTHM test in August was at Salem Housing, 3216 King Boulevard, which registered 90 ppb. Flint's violation of the federal law was the result of the annual average of TTHM above 80 ppb at a minimum of one of the eight testing locations.

City officials have said they expected improved TTHM levels after the installation of the new **$1.6 million carbon filter** this summer.

"The city of Flint is continuing to improve its water system, including both the areas of treatment and distribution," Mayor Dayne Walling said in a news release issued by the city Thursday, Aug. 3.

TTHM is a colorless, odorless byproduct of chlorinating water with high levels of total organic carbon. The city began having problems managing TTHM after it began using the Flint River as its water source in April 2014.

In past notices mailed to Flint water customers, the city has warned that drinking water with excess amounts of TTHM can pose increased health risks for those with a compromised immune system, the elderly, pregnant women and infants.

The good news on TTHM comes the day after researchers at Virginia Tech published an online report, saying tests show Flint **drinking water is "very corrosive"** and is "causing lead contamination in homes."

A statement from Walling on the lead issue says the city will work with the DEQ on a plan aimed at reducing the corrosive effects of water on older transmission pipes and home service lines.

Scary: Leaded Water and One Flint Family's Toxic Nightmare

July 9th, 2015, 11:28 PM

Like 2 61

Curt Guyette is an investigative reporter for the ACLU of Michigan. His work, funded by a grant from the Ford Foundation, focuses on emergency management and open government. He writes regularly for Michigan Democracy Watch Blog. (http://www.aclumich.org/democracywatch/index.php/entry/hard-to-swallow-toxic-water-in-a-toxic-system)

By Curt Guyette

It took a while for LeeAnne Walters to realize the full impact of the number: 13,200.

LEEANN WALTERS

Walters—a stay-at home mom with four sons and a husband in the Navy—had seen other numbers reflecting the quality of drinking water at her Flint home that were devastating. But 13,200? She'd never seen anything like this.

The city had tested her water twice in this past March and both times found dangerously high levels of lead—104 parts per billion (ppb) and 397 ppb, respectively.

Those numbers filled her with dread, because they meant her family had been exposed to high levels of a terribly toxic heavy metal that put her children's future in jeopardy.

But it was the result of a third test of the tap water in her home, performed by independent experts at Virginia Tech University, that most stunned Walters.

"It took a while for me to wrap my head around it," said Walters.

The VT researchers discovered lead levels in Walters' water reached a jaw-dropping 13,200 ppb—more than twice the amount at which the U.S. Environmental Protection Agency classifies

water as hazardous waste.

"When I saw those numbers I was shocked," said Virginia Tech professor Marc Edwards, a former MacArthur Fellow and respected authority on corrosion in drinking-water systems, who oversaw the tests.

Edwards played a key role in discovering and addressing the problem of corroded water pipes and lead in Washington, D.C. during the early 2000s, in what's described as the *worst* contamination crisis ever seen in a major *urban* water system.

In terms of lead levels, the Walters family's numbers eclipsed even the worst D.C. homes.

"I have never in my 25-year career seen such outrageously high levels going into another home in the United States," said Edwards. "This was literally hazardous-waste levels."

But the condition of Walters' tap water raises a much more far-reaching question: Since the city moved away from Detroit's water system and began pumping water from the Flint River, how many other families have been put at risk by the city's questionable testing procedures and handling of the water supply?

The Walters family surely isn't alone in dealing with the threat of lead-laced drinking water. Flint has tens of thousands of homes that are a half-century old or older, built at a time when water service lines were typically made of lead.

And according to various experts, including an EPA water-quality specialist, the city's actions are only exacerbating the threat.

"What the public needs is accurate information," explained Miguel Del Toral, regulations manager for the Ground Water and Drinking Water Branch of the EPA's Region 5.

Instead, the city is utilizing testing measures that almost ensure that worst-case scenarios such as the one facing the Walters family escape detection, asserted Del Toral in an internal EPA memo provided to the ACLU of Michigan.

Compounding the threat is what Del Toral describes as the continued inability of officials to adequately treat water coming into people's homes from the Flint River.

"I don't want to scare people unnecessarily," said Del Toral in a phone interview from his home in Chicago. "But there is absolutely a problem in Flint that needs to be addressed right away."

During his interview with the ACLU of Michigan, Del Toral said he was willing to go on the record with his concerns, but that he was doing so as a private citizen, not as a representative of the EPA.

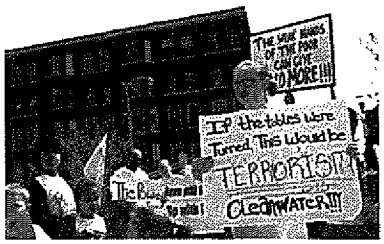
EPA rules, he said, required that such interviews be routed through the agency's public affairs people. But he's willing to speak out nonetheless, he said, because of the potential harm to the public is so great.

WATERING DOWN THE TESTS

Perhaps the most vexing problem in all of this is the contamination caused by the city's decades-old network of lead and iron pipes—a problem directly connected to the switch to river

water, and the city's failure to adequately treat it.

Under the U.S. Environmental Protection Agency's rules, if lead reaches a level of 15 parts per billion in water, the source of the problem must be identified and corrected.



Residents protest the poor water quality

In early March, after months of requests (and only after Walters had received a doctor's note raising concerns about problems with the water), the city finally conducted a test. It found lead levels of 104 ppb the first time. A second test recorded a level of 397 ppb.

Blood tests, taken after those water-sample numbers were reported, revealed that one of her children, a four year old, had lead poisoning.

The news was devastating, said Walters, and the concern it creates for her child's future is haunting.

"Lead can affect almost every organ and system in your body," according to the EPA's web site. "Children six years old and younger are most susceptible ... Even low levels of lead in the blood of children can result in: behavior and learning problems; lower IQ and hyperactivity; slowed growth; and hearing problems."

Those dangers made Walters all the more determined to get her questions answered.

For one thing, she wanted to know why residents were being instructed to "pre-flush" water lines before drawing samples that would be tested by the city

After much searching, she found Del Toral at the EPA's Region 5 in Chicago. He explained to her that her instincts were right, and that she had good cause to be concerned about the way testing was being done.

"The practice of pre-flushing before collecting compliance samples has been shown to result in the minimization of lead capture and significant underestimation of lead levels in drinking water," wrote Del Toral in an internal memo dated June 24.

Del Toral went on to say that the city's testing methods were a "serious concern" because they "could provide a false sense of security to the residents of Flint regarding lead levels in the water." As a result, he warned, residents could fail to take the necessary precautions to protect their families from lead in the drinking water.

Virginia Tech's Edwards completely agrees with Del Toral's assessment.

"The net effect of a 'pre-flush' is to greatly reduce the likelihood of detecting lead in samples collected ... that would normally be present in the consumers drinking water," Edwards wrote in an email. "I have long maintained that the practice should be banned, as it artificially lowers the amount of lead detected in samples versus typical consumer exposure."

Asked about these concerns, city spokesman Jason Lorenz offered the following email reply: "While I cannot directly respond to Mr. Del Toral's remarks without first contacting the EPA

Region 5 office, I can say that the City of Flint follows all the testing procedures and schedules as required by the U.S. EPA."

He added that the Michigan Department of Environmental Quality (MDEQ) endorses the city's sampling method. The MDEQ did not respond to phone calls and e-mails seeking its comments on the controversy.

Del Toral contended in an interview that what Flint's doing is actually exploiting a "loophole" in the law.

"From a technical standpoint, there's no justification for the way Flint is conducting its tests," Del Toral said. "Any credible scientist will tell you [the city's] method is not the way to catch worst-case conditions."

There is no legitimate reason for the city's methodology, said Del Toral.

During his interview with the ACLU of Michigan, Del Toral said he was willing to go on the record with his concerns, but that he was doing so as a private citizen, not as a representative of the EPA.

EPA rules, he said, required that such interviews be routed through the agency's public affairs people. But he was willing to speak out nonetheless, he said, because of the potential harm to the public.

FLUSHING OUT REAL ANSWERS

It was Del Toral who, after determining that the lead problem plaguing the Walters family was coming from outside their home, connected LeeAnne with Edwards at Virginia Tech.

Instead of taking a single sample after a line had been "pre-flushed" under the city's direction, Edwards instructed Walters to collect a series of samples from water that had been allowed to sit in the service line long enough to accurately reflect levels the family could be exposed to under normal use.

(Meanwhile, that same service line, dug up and replaced after the sample collection, was found to be made of lead in one section and iron in another.)

Edwards tested the water and discovered that the lead contamination ranged from 200 ppb to the 13,200 ppb figure that stunned LeeAnne Walters—and should likewise shock many others.

Given the age of much of Flint's infrastructure, Edwards agrees with Del Toral's assessment that the test results they found at the Walters home amount to an alarm going off, and others in the city need to pay attention.

"I do not see any reason why there would not be serious problems occurring in at least some other Flint homes," said Edwards.

In 1986, the U.S. Safe Drinking Water Act was amended to prohibit the use of lead pipes in public water systems. Every house built before that is potentially at risk, said Edwards. About half of Flint's roughly 40,000 homes are at least 50 years old.

Making things worse is the fact that the high levels of chlorine being used to treat Flint's dirty river

water lead to the creation of a carcinogenic byproduct know as total trihalomenhanes, or TTH?M. To keep TTHM levels down, the city is adding ferric chloride. The trouble is, that additive can also accelerate the corrosion of lead and iron pipes.

Adding yet another layer to the problem is something the city is *not* doing.

According to Del Toral, Flint should be adding corrosion-control chemicals designed to help keep lead and copper in pipes from leaching into drinking water. Doing so is required by federal regulations, wrote Del Toral in his memo.

"To our knowledge, that is inaccurate," said Flint spokesman Lorenz. "Before the plant was placed in operation, the City (and our engineering firm) had numerous discussions with DEQ personnel and inquired if corrosion-control chemicals – typically phosphates --needed to be included in the treatment process. The use of these chemicals was not required or mandated."

What's indisputable is this:

Flint's water contained corrosion-control chemicals until April 2014, when Flint's ties to the Detroit water system were severed. Flint officials hailed that changeover as a cost-cutting move for a city facing a financial crisis so severe it had been placed under the control of a state-appointed emergency manager.

Discontinuing the use of the anti-corrosion chemicals allowed toxic scale built up on the insides of pipes over the past decades to be released into water flowing into people's homes, explained Del Toral.

In his memo, Del Toral warned: "The lack of mitigating treatment is especially concerning as the high lead levels [that result] will likely not be reflected in the City of Flint's compliance samples due to sampling procedures used…"

In other words, at the same time the city is exacerbating the problem, it's conducting tests that will probably fail to identify the true extent of the threat.

Del Toral described the situation as a "major concern."

"In the absence of any corrosion control treatment, lead levels in drinking water can be expected to increase," he warned in his memo.

The EPA offered Flint officials the use of agency experts to help get the situation under control, said Del Toral, but added that, to his knowledge, the city has so far declined all help.

LeeAnne Walters said that when she asked why city officials weren't taking the EPA's offer of assistance, she was told, "We don't need it."

Flint spokesman Lorenz, on the other hand, maintained that "the city continues to work closely with the MDEQ and the EPA Regional Office."

As for Walters's family, that the city has finally replaced the service line leading to their home, and lead levels have dropped below the 15 ppb EPA action level.

The problem now, she said, is that water currently coming out of her tap tinged yellow and smells of rotten eggs. City officials have given her no explanation as to the possible cause of that.

It is just one more in a long list of questions that need to be addressed.

"What we need," said Walters, "are more answers."

But it's not just answers the people of Flint require.

They also need solutions. And, as Del Toral's EPA memo emphasizes, they need them immediately.

Corrosive Impact: Leaded Water & One Flint Family's T...

Lead leaches into 'very corrosive' Flint drinking water, researchers say

Ron Fonger | rfonger1@mlive.com By **Ron Fonger | rfonger1@mlive.com**
on September 02, 2015 at 5:41 PM, updated September 03, 2015 at 9:01 AM

Flint Journal file photo

FLINT, MI -- Flint drinking water is "very corrosive" and "causing lead contamination in homes," researchers from Virginia Tech University reported online Wednesday, Sept. 2.

"On a scientific basis, Flint River water leaches more lead from plumbing than does Detroit water," the report concludes. "This is creating a public health threat in some Flint homes that have lead pipe or lead solder."

The Virginia Tech report comes as students there, overseen by Professor Marc Edwards, are in the final days of testing water collected from 300 sample kits distributed to Flint residents.

On Monday, Aug. 31, the researchers reported 42 percent of 120 initial samples from Flint had lead levels that were more than 5 parts per billion, "which suggests a serious lead-in-water problem, according to our experience and criteria."

Virginia Tech was initially contacted by a Flint resident who had concerns about lead in **Flint water**. It has been working with citizen groups in Flint such as Water You Fighting For.

Twenty percent of the first samples also exceeded the U.S. Environmental Protection Agency lead action limit of 15 ppb, the report said.

The EPA requires water systems like Flint's to collect tap samples from sites that are more likely to have plumbing materials containing lead.

If more than 10 percent of samples exceed 15 ppb, then water systems are required to take action, including steps to optimize corrosion control treatment.

Lead is a toxic metal that was used for many years in products found in and around homes, according to EPA.

"Even at low levels, lead may cause a range of health effects, including behavioral problems and learning disabilities," EPA's website says. "Children 6 years old and under are most at risk because this is when the

brain is developing."

The Virginia Tech report on Flint River water comes two days after representatives of three organizations delivered more than 26,000 online **petition signatures to Mayor Dayne Walling**, demanding the city end its use of the Flint River and **reconnect the city to the Detroit water system**.

The petition language says high lead levels are one reason the city should no longer use the river as a drinking water source.

Walling and Department of Public Works Director Howard Croft issued statements in response to questions about lead in Flint water Wednesday after Croft declined to discuss the issue in a news conference Tuesday.

Flint spokesman Jason Lorenz said the two would not comment further Wednesday.

"The city of Flint is currently in compliance with the safety mandates of the Michigan Department of Environmental Quality and continues to work with them to stay in compliance with all safety and quality standards," Croft's statement said. "We have also been in constant contact with Virginia Tech, sharing information as it becomes available."

Walling, who has supported Flint's continued use of the Flint River as a drinking water source, said, "Lead can be a concern in communities with older public and private infrastructure.

"The city of Flint has offered free and independent testing to residents since spring, and I encourage people to use this service if they have questions," Walling's statement said.

Edwards, a professor of civil and environmental engineering, said the elevated lead levels he has seen in Flint tap water are tied to a corrosive water source that contains about eight times more chloride than Detroit water does.

"Chloride is generally considered to be very corrosive to iron. For instance, chloride present in road salts applied in the winter causes iron in cars and bridges to rust," the Virginia Tech team's website says.

"This could be a huge public health problem. ... The Flint water just ate the pipe up," Edwards said of the testing he has overseen so far.

In the testing, researchers took copper pipe pieces joined with lead solder inside them, according to the report, which says lead solder is probably present in plumbing systems of many Flint homes built before 1986.

Lead solder-copper pipe test pieces were placed in containers filled with water from Detroit and Flint in the experiment, according to the report.

"If it were me, I would not be using (Flint River water) for cooking or drinking unless I had it tested for lead," said Edwards, who previously mounted a six-year campaign that succeeded in forcing the U.S. Centers for Disease Control and Prevention to admit it had misled the public about the risk of lead in the Washington, D.C., area's drinking water, according to The Washington Post.

"Bottled or filtered water (is what I would use for) children under 6 years old or if I was pregnant," he said.

Brad Wurfel, communications director for the state Department of Environmental Quality, said the preliminary water testing results from Virginia Tech don't jibe with two separate rounds of testing during the past year by the city.

That testing indicated "Flint drinking water meets state and federal safe drinking water standards," Wurfel said.

Wurfel said lead levels detected in testing are not the result of water containing lead when it leaves Flint's treatment plant. But he said the state "has requested Flint optimize its water treatment to further limit exposure to lead from plumbing in homes."

The concerns about lead are the latest challenge for the Flint water system since the city started using the Flint River to replace Lake Huron water sold by the city of Detroit in April 2014.

Since the switch, the city has been plagued by issues such as water main breaks and boil water advisories because of bacteria and has been in violation of the Safe Drinking Water Act because of high levels of total trihalomethanes (TTHM), a byproduct of chlorinating river water.

The Rev. Allen Overton, who hand-delivered petitions to Walling on Monday, asking that city officials reconnect the Flint water system to Detroit, said Wednesday that the Virginia Tech experiment is more evidence Flint is not using the best quality of water available.

"We have a major health issue here, (and) they are not being honest with the citizens of Flint," Overton said.

City Council President Josh Freeman said the city has been willing to provide customers with free water testing and has taken action — such as installing a new $1.6 million filtration system — to address problems such as TTHM.

Councilman Eric Mays said, as more water testing is done, it becomes clearer that Flint should be negotiating with Detroit for a new, short-term water contract as work continues on the Karegnondi Water Authority pipeline.

The pipeline, a partnership between the city and Genesee County, is expected to bring untreated Lake Huron

water to Flint at some point in 2016.

"They are trying to make the water safe by trial and error," said Mays, who called Flint's water situation "a disgrace."

Home (http://flintwaterstudy.org/) Test Update: Flint River water 19X more corrosive than Detroit water for Lead Solder; Now What?

Test Update: Flint River water 19X more corrosive than Detroit water for Lead Solder; Now What?

September 11, 2015 (http://flintwaterstudy.org/2015/09/test-update-flint-river-water-19x-more-corrosive-than-detroit-water-for-lead-solder-now-what/) Siddhartha Roy (http://flintwaterstudy.org/author/flintwaterstudy/) Articles (http://flintwaterstudy.org/category/articles/), Research Updates (http://flintwaterstudy.org/category/research-updates/)

We are now three weeks into our laboratory experiment w.r.t. testing the relative corrosivity of Flint River water versus Detroit water (http://flintwaterstudy.org/2015/09/flint-rivers-water-is-very-corrosive-to-lead-and-causing-lead-contamination-in-homes/). As the test continues, it becomes a more accurate measure of the relative corrosivity of the two waters. We previously noted, that it would be expected that Flint River water would be much more corrosive than Detroit water, due to its higher chloride content.

Experiment: When we visited Flint, we took pieces of copper pipe joined with lead solder (old solder is 50% lead by weight (http://www.copper.org/environment/water/e_p_lead.html)) inside them. Lead solder is probably present in the plumbing of many Detroit/Flint homes built before 1986 when it was banned from use in drinking water systems (http://www.copper.org/environment/water/e_p_lead.html). We put the lead solder-copper pipe test pieces in 250 mL containers, and filled them with the following three waters:

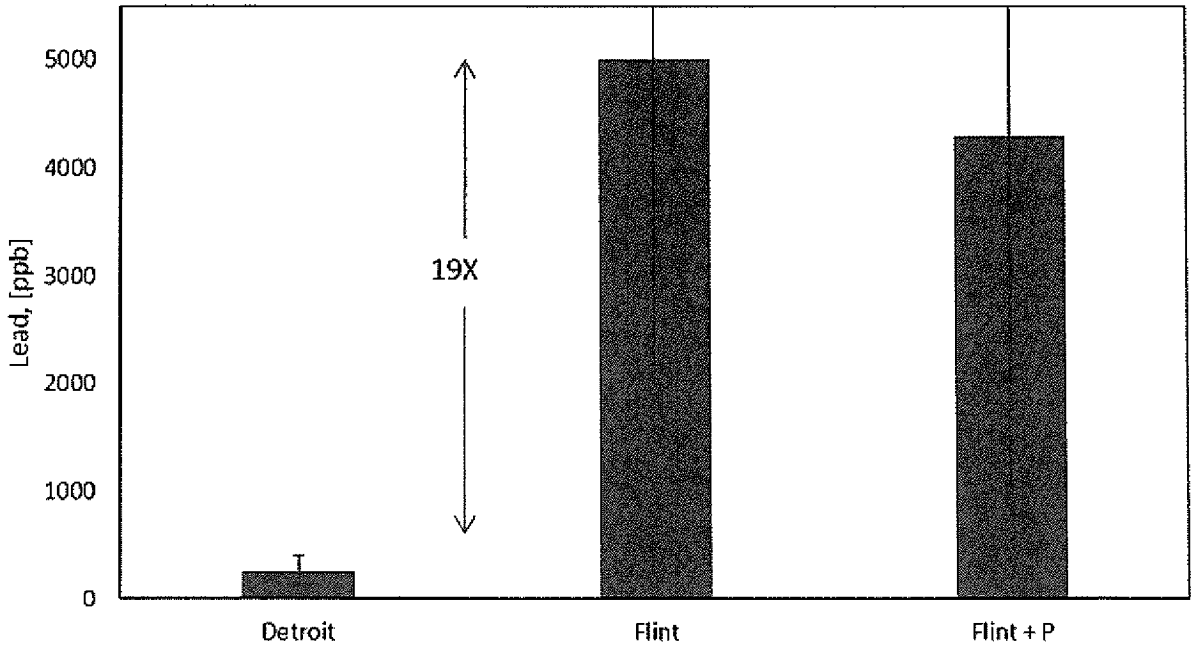
Test 1) Detroit water

Test 2) Current Flint River water

Test 3) Current Flint River water with orthophosphate (a typical corrosion inhibitor (http://www.lenntech.com/products/chemicals/water-treatment-chemicals.htm#Corrosion%20inhibitors))

Test 3 was conducted, to see if ***adding orthophosphate to Flint River water would stop lead corrosion.*** About 50% of water companies in the U.S. add orthophosphate to their water to control lead corrosion, but it is not currently added to Flint River water.

Results and Observations:



(http://i2.wp.com/flintwaterstudy.org/wp-content/uploads/2015/09/update.png)

Figure 1 – Data from Week 3 comparing lead corrosion in Detroit water (left), current Flint water (middle), and Flint water with orthophosphate (right)

From the data shown above in Figure 1, it is clear that Detroit water is much less corrosive to lead solder than the Flint River water. **On average, Detroit water is 19 times (or 19X) less corrosive than the Flint River water currently in use.** That is, the current Flint River water leaches 19X more lead to the water than Detroit water. This explains why the lead in Flint's water in our survey, is so high, (http://flintwaterstudy.org/information-for-flint-residents/results-for-citizen-testing-for-lead-300-kits/)even when it was low before when Detroit water was being used.

We can actually still see the high lead in the Flint River water test by eye (i.e. as white particles suspended in the water (http://flintwaterstudy.org/2015/09/flint-rivers-water-is-very-corrosive-to-lead-and-causing-lead-contamination-in-homes/)). Lead levels in our test with Flint River water, were slightly above hazardous waste levels (5000 ppb), which is still lower than the worst levels of lead we detected in the

home of Flint resident Lee-Anne Walters (http://flintwaterstudy.org/2015/08/hazardous-waste-levels-of-lead-found-in-a-flint-households-water/).

Orthophosphate still does not seem to help stop lead leaching in Flint River water, which is also consistent with expectations based on experiments in high chloride water (http://www.sciencedirect.com/science/article/pii/S0010938X11000382). There is a slight improvement, but even with phosphate, Flint River water has 16 times more lead compared to the same condition using Detroit water. We will continue to run these tests, but at present it does not seem like orthophosphate will provide a quick answer to the very high lead levels in Flint water.

Conclusion: On a scientific basis, Flint River water leaches more lead from plumbing than does Detroit water as predicted before (http://flintwaterstudy.org/2015/08/why-is-it-possible-that-flint-river-water-cannot-be-treated-to-meet-federal-standards/). **This is creating a public health threat in some Flint homes that have lead pipe or lead solder. Unfortunately, adding orthophosphate corrosion inhibitor to the Flint River water, does not solve the lead problem.**

PRACTICAL IMPLICATIONS

We believe, that in the weeks and months ahead, MDEQ and Flint will be forced to admit they failed to protect public health as required under the Federal Lead and Copper Rule. The question that will then be asked is "What can be done to protect residents?"

Step 1: Issue Scientifically Sound Advice.

The first step is to admit that **the water in Flint is not safe for cooking or drinking** (http://flintwaterstudy.org/information-for-flint-residents/results-for-citizen-testing-for-lead-300-kits/)— a fact that MDEQ still denies. According to MDEQ statements provided to reporter Ronald Fonger this week, which were presented to us for comment, MDEQ's Brad Wurfel asserts that:

> ***"the issue here isn't Flint's water source or water plants. It's the high number of older homes with lead pipes and lead service connections....Folks who have concerns should get a water specialist to take a look at their home and see what they need to do to achieve peace of mind, because lead and copper are home plumbing problems that no water source can eliminate entirely."***

We note that this is the exact same position that MDEQ and the city took months ago, after Lee-Anne Walters' child was lead poisoned from exposure to high lead in Flint water (http://www.abc12.com/home/headlines/Flint-mother-said-the-water-gave-her-son-Lead-poisoning-324496551.html). After MDEQ and the City blamed Ms. Walters home plumbing for the problem, an EPA water specialist did come to her home and inspected her plumbing. His finding: There were no lead plumbing sources in her home (http://www.aclumich.org/sites/default/files/file/EPAWaterReport062415.pdf). How does that finding, provide Ms. Walters and other Flint residents, with "peace of mind?"

Likewise, during our sampling events in Flint homes (http://flintwaterstudy.org/information-for-flint-residents/results-for-citizen-testing-for-lead-300-kits/), we are finding very high lead in other homes with modern lead free plumbing, which again points to city owned lead pipes and corrosive water as the problem.

On the basis of these facts, we consider MDEQ's position to be both unscientific and irresponsible, and we stand by our recommendations to Flint consumers, that they immediately reduce their exposure to high lead in Flint's water by implementing protective measures when using tap water for drinking or cooking.

Step 2. Implement Corrosion Control.

The second step will ultimately require some sort of corrosion control treatment to reduce lead in Flint water. Three options are possible as detailed below:

1. **Switch back to the non-corrosive Detroit water.** It is our opinion, based on years of experience, that Flint's lead levels would drop markedly in about one month.
2. **Add orthophosphate to Flint River water.** As indicated in this work, orthophosphate will not reduce lead leaching from all lead plumbing sources. On the basis of our extensive experience, we would only expect modest improvements to water lead levels if orthophosphate was added.
3. **Wait for KWA pipeline.** If orthophosphate was added to water from the KWA pipeline, it would be about the same corrosivity as Detroit water (Option A). In that case, Flint residents will have to live with the very high lead in their water, until at least one month after the pipeline is connected.

Politicians and residents will ultimately have to look at which of the above options is best for Flint, after weighing feasibility and costs.

FUNDRAISING CAMPAIGN TO BUY LEAD FILTERS FOR FLINT RESIDENTS

INFORMING FLINT RESIDENTS ABOUT LEAD IN THEIR WATER

All Flint residents who returned their lead kits will receive their results via regular mail. You will also receive this document on how to interpret your lead results (http://flintwaterstudy.org/wp-content/uploads/2015/08/interpretation.pdf). For the **252** lead kits analyzed so far, we have finished calling residents who had considerably high lead in their water.

Lead levels in Flint water spiked after switch to river, state records show

Ron Fonger | rfonger1@mlive.com By **Ron Fonger | rfonger1@mlive.com**
on September 19, 2015 at 5:50 AM, updated September 19, 2015 at 7:59 AM

Flint Journal file photo

FLINT, MI -- City officials insist their own testing shows Flint water is **safe** and within federal guidelines for lead.

But those same tests also show lead levels have been rising since the city began using the Flint River for water 16 months ago.

The results of Flint's testing for lead since 1992, released by the state Department of Environmental Quality to The Flint Journal-MLive, show 10 percent of homes sampled in the city's most recent testing contained 11 parts per billion or more of lead, with six of 69 samples exceeding the federal lead limit of 15 ppb.

Those are the highest lead levels measured in Flint by the city in more than 20 years, the state data shows.

In contrast, the city's tests of Lake Huron water from Detroit for one 10-year period -- from June 2001 until September 2011 -- resulted in just one of 155 samples registering higher than 15 ppb of lead.

Flint began treating river water in April 2014 after Detroit terminated an expired contract for selling water to the city. The cutoff came after Flint joined Genesee County to form the Karegnondi Water Authority, which is building a new pipeline to Lake Huron, a project that's expected to be completed sometime next year.

City and state officials have pointed to their own testing as evidence that Flint water is safe and under the 15 ppb limit, but have said little about the lead level drifting up.

Marc Edwards, who is supervising separate water **testing in Flint by Virginia Tech University**, said there's no mistaking the pattern.

"The Flint River -- based on the chemistry -- has an obvious propensity for lead to be released to water," Edwards said. "There should have been red lights flashing (when the city began using the river in April 2014) -- knowing that if you put that water into Flint's system without corrosion control, you're going to see a massive lead release."

That release is what Edwards' testing has shown as 10 percent of homes sampled by students and faculty from Virginia Tech have had lead levels of at least 25 ppb.

Since the testing started, Mayor Dayne Walling announced Flint would speed up development of a plan for reducing corrosiveness of city water and called for $10 million in state funds to begin replacing lead and lead solder in water service lines and plumbing.

Flint Department of Public Works Director Howard Croft would not attribute higher lead levels to the river alone, but said the source of the water is one variable as is the amount of time water is stagnant in pipes.

"Lead is in there. It's always been there," Croft said. "We would like there to be no lead, (but) I'm happy how aggressively we are responding" to what the city has.

Steve Busch, Lansing and Jackson district supervisor in the DEQ's office of drinking water and municipal assistance, said lead testing results vary in many areas and a shift doesn't necessarily show Flint River water is more susceptible to higher lead levels than lake water.

"We see numbers fluctuate with the same treatment and the same water," Busch said. "We have levels go up and down from monitoring round to monitoring round."

Lead is a toxic metal that was used for many year in products found in and around homes, according to the U.S. Environmental Protection Agency. Even at low levels, lead may cause health effects such as behavioral problems and learning disabilities.

Current regulations for lead in water began in 1992 and require a limited amount of testing to measure the degree to which lead leaches into tap water after flowing through lead service lines and lead solder in home plumbing.

If more than 10 percent of tap water samples from water systems exceed 15 ppb, the water system can be required to take steps like making water less corrosive or replacing lead service lines.

Since the EPA announced its lead and copper rule in 1991, Flint has collected 33 samples every six to 36 months but the number of tests increased after the city changed its water source to the river,

according to state data.

State records show 100 samples were collected from Flint in the last six months of 2014, showing two sites with readings of more than 15 ppb of lead and 10 percent of homes registering at 6 ppb or more.

From January until June this year, the city collected just 69 samples, a reduction that was allowed because Flint's population had dropped below 100,000, Busch said.

The last time testing by the city showed a higher percentage of water samples above 11 parts per billion was 1992, immediately after new lead and copper rules went into effect.

In that case, the city of Detroit took five years to develop a plan to better control corrosion and lead levels and brought lead levels down from a high of 15 ppb in 10 percent of samples taken in Flint.

The water in Flint is likely poisoning kids.

That's what pediatricians in the city say, after looking at lead levels in young children before and after the city switched the source of its drinking water from the Detroit water system to the Flint River.

Listen
3:28

There's a long list of complaints about Flint's water. But physicians are really concerned about this one.

"My research shows that lead levels have gone up. I cannot say it's from the water, but that's the thing that has happened," said Dr. Mona Hanna-Attisha, a pediatrician with Hurley Children's Hospital.

Hanna-Attisha says she decided to look into blood-lead levels after researchers from Virginia Tech found elevated lead levels in tap water due to the corrosive nature of the river water.

She analyzed blood test results of 1,746 children age five and younger from Flint, and 1,670 non-Flint children. Before the switch, 2.1% of Flint children had elevated blood lead levels. After the switch, that rate jumped to 4%. By comparison, the rate for non-Flint children went from .6% to 1%, which Hanna-Attisha says is statistically insignificant.

She calls the city's response to water quality problems "inadequate," and says precautions need to be taken immediately.

"Because the impact of not doing anything will haunt us for years to come," says Hanna-Attisha, citing interventions like special education, lost productivity, and incarceration costs associated with high lead levels. "The cost will be astronomical in decades to come. So we cannot wait until this year or next year. We have to think five years from now, ten years from now."

Hanna-Attisha and other physicians are urging the city to issue an advisory about how to minimize exposure to lead in the water. The county health department says it's drafting that advisory now.

The news about the elevated lead levels did not surprise Lee Anne Walters. She found out her son had alarmingly high lead levels in April of this year.

"I kept talking to the doctors, trying to figure out why he wasn't growing," says Walters. "He was 27 pounds at four years old. His hair was thinning, breaking out in rashes."

Walters says her son would get a rash when he took baths. There would be a line on his body that corresponded with where the bath water ended. Above it, his skin was fine. Below it, where his skin was underwater, he'd get a rash.

"The doctors in the city gave me a hard time testing my kids," says Walters. "I took them out the city to a dermatologist down in Brighton, who ran the test and called me personally to tell me that he did have lead poisoning and anemia from the lead poisoning, and he's having speech problems."

It turns out the rash was probably from a chlorine byproduct the city had to dump into the river water to kill the E. coli that had made people sick the summer before.

People knew that chemical – it's called TTHM – was a problem. But lead wasn't on many people's radar until a guy named Marc Edwards came to town.

"I want them to take responsibility. I want them to quit poisoning their citizens."

Edwards is a researcher from Virginia Tech. His tests of Flint tap water found lead levels in some homes that were higher than federal regulators allow – and a lot higher than the city found in the tests it conducted. He says the river water is so corrosive it's eating the lead from old pipes and solder.

"That's why we are actually asking for funding to help with infrastructure," said Flint City Administrator Natasha Henderson. "It's not a secret that the city is very financially distressed."

Henderson and other city officials say they're working with state and federal regulators to get a handle on the problem.

But they're quick to point out that the city's own tests show it's in compliance with the Safe Drinking Water Act.

But activists say they don't trust how the city arrived at that conclusion, and point to the Virginia Tech results as evidence that the city has been conducting flawed testing.

"I want them to take responsibility," says Lee Anne Walters, the mother whose son has experienced health problems since the switch. "I want them to quit poisoning their citizens."

Let's be clear...this situation is at least partly a result of massive cuts in state revenue sharing, which led the city to take dramatic steps to cut its costs...and now people are paying the price. But hey, we cut taxes at the state level (and our per cap income is still in the bottom 15 in the nation).

Allison MacArthur-Ruesink •

This has nothing to do with Cost Cuts. The MDEQ is rife with corruption. perhaps the "employee" who had oversight of this facility was also hired and promoted based upon a family connection with a member of the Water Division's "Hot Tub Club" instead of experience and education!? I complained about the problems as far back as the early 2000's, even to Governor Grandholm's husband via Reading for Leading. Nothing was corrected !! Employees who speak out are harassed mercilessly and even worse as in my case. When I did not voluntarily retire after being asked 3x by MDEQ's Jon E. Russell, he conspired and fabricated a case to get rid of me!! I took a polygraph from Forensic Polygraph Services (Mr. Neil Myers) to prove I was telling the truth

but Michigan's corrupt Attorney General Bill Schuette and his equally corrupt Assistant AG Joseph Yung-Kung Ho (P-77390) have denied me any measure of Justice!! It is not a coincidence that the Judge involved with my case Thomas Wilson Jackson County Michigan used to work for the AG's Office. Everything was filed in a timely manner!! The MDEQ have even refused my receiving copies of my OWN PERSONNEL FILE! This is Michigan's way of saying "Thanks for 30 years of Service" They pulled this BS 65 days before my 55th birthday so they could deny my collecting my Retirement Benefits before age 60. Does someone have to die before the Bureaucracy cleans its own house?! Read "Well of Lies" about how inept and unqualified public servants who are unqualified or just plain corrupt, can injure innocent people!!

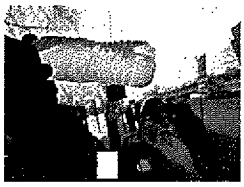
Doctor: Lead seen in more Flint kids since water switch

By Robin Erb, Detroit Free Press 6:44 p.m. EDT September 25, 2015

Number of Flint children with lead poisoning jumps after Flint water switch, says researcher.



(Photo: Ryan Garza, Detroit Free Press)

Flint's ongoing water woes are now associated with an immediate and irreversible danger — possible lead poisoning of some of the city's children, according to a review of blood test results by a Hurley Children's Hospital pediatrician.

"I was hoping not to find anything, but what we found ... is concerning," said Dr. Mona Hanna-Attisha who also leads the pediatric residency program at Michigan State University's College of Human Medicine.

"This is not something you mess around with," she said. "Our population already has so many issues from poverty, from unemployment, from violence."

State officials say their own review of blood test results have not shown the same increase that Hanna-Attisha found. Moreover, water tests have similarly shown lead within federally accepted levels, they say.

Hanna-Attisha examined results from blood samples of Genesee County children taken both before and after the city ended its water contract with the Detroit Water and Sewerage Department (http://www.dwsd.org/)and began pulling water from the Flint River.

The number of Flint children with elevated blood-lead levels — 5 micrograms per deciliter or more — jumped from 2.1% in the 20 months prior to Sept. 15, 2013, to 4.0% between Jan. 1 and Sept. 15 this year. In certain ZIP Codes, the change was even more troubling, she said — jumping from 2.5% of the children tested to 6.3%.

Blood is often drawn by pediatricians as part of routine lead-level testing, especially among children who are on Medicaid. That gave Hanna-Attisha 1,746 test results from Flint children to compare against 1,640 results from elsewhere in Genesee County. Children in Genesee County outside of Flint showed no significant increase in blood-lead levels.

Health officials have said no lead levels are safe (http://www.cdc.gov/nceh/lead/). Lead can lead to serious developmental problems, reducing a child's IQ and causing serious behavioral and emotional problems. Though levels can fall in individuals over time, the damage is permanent.

If Hanna-Attisha's analysis is correct, this upward trend in Flint interrupts years of progress in reducing dangerous blood-lead levels.

State data show that the percentage of children with elevated blood lead levels have been falling for years. In fact in 2013, 3.6% of Flint children younger than 6 had elevated blood-lead levels, compared with the state-wide rate of 3.9%.

Though Hanna-Attisha's review didn't try to determine cause, "we can't think of another reason" for the trend other than the change in Flint's water source.

The review is sure to ratchet up tension in Flint.

In 2014, city officials ended the city's contract (/story/news/local/michigan/2015/01/22/water-woes-latest-hit-flint/22193291/) with the Detroit Water and Sewerage Department (http://www.dwsd.org/), saying that water costs were too high. They opted instead to pull from the Karegnondi Water Authority, which is building a system to supply Genesee County with water pulled from Lake Huron. In the long run, this will mean lower water costs, officials have said.

But until the new system comes online in 2016, Flint is temporarily pulling water from the Flint River. Since it made the switch, residents have complained that the water smells, is discolored and makes them sick.

Soon after the switch, tests indicated the presence of coliform bacteria, which can suggest the presence of other disease-carrying pathogens. The water was then treated with disinfectants, and city officials maintain the water is safe.

The question is not that whether there is a higher level of lead in water from the Flint River — it's that river water may be more corrosive as it travels through lead pipes on residential properties and in homes, said Brad Wurfel, a spokesman for the Michigan Department of Environmental Quality. About 15,000 of the 40,000 Flint customers have lead pipes connecting to the city system, he said.

But he said testing has shown that lead levels in the Flint water system — both before and after the switch in 2014 — have been under the acceptable limit of 15 parts per billion during every three-year testing cycle since 1992. Additionally, two rounds of supplemented tests since the system switch put

lead levels at 6 parts per billion and then at 11 parts per billion — a change that Wurfel said fits in line with previous fluctuations.

Congressman Dan Kildee, a Flint Democrat, called state and local testing "lackluster."

For one thing, Flint residents collect samples, and there are concerns that there are too few samples and that they represent only some parts of the city. And Wurfel confirmed that about 60 bottles of water samples were turned in by citizens in the last round of testing, even though 200 bottles were sent out.

In the best of circumstances — with enough sampling and previous clean tests of water — citizen sampling might be adequate. But, in Flint — where there's a major change in the system that some residents say have led to health problems, "it seems to be a much higher standard would apply," Kildee said.

In addition to water testing, Wurfel a said state public health officials have reexamined results of blood-lead level testing among Flint children. In short, that data doesn't show the same upward trend that Hanna-Attisha's found, he said.

Wurfel said environmental officials aren't taking the matter lightly, and they realize the water system is in "dire" need of an overhaul. They've requested a meeting with U.S. Environmental Protection Agency authorities to "review protocols" to make sure the state's testing is adequate.

"Lead is serious. Lead builds up. Lead effects children. It's not something we take lightly," he said. "We're confident with what we've done, but we know there are concerns."

Angela Minicuci, a spokeswoman for the Michigan Department of Health and Human Services, any increase in the past year in blood-lead levels among Flint children is attributed to predicable seasonal spikes.

In the year preceding the change in the water system, 95 Flint children younger than 16, or 2.4% of those tested, had elevated blood-lead levels, according to state data. The following year, 123 children, or 3.2%, of those tested had elevated blood-lead levels.

There is "cause for concern in Flint," but it cannot be attributed to the water, she said.

Free Press staff writer Kristi Tanner contributed to this report.

Lead's toll (https://www.nlm.nih.gov/medlineplus/ency/article/002473.htm) on children:

Lead can affect many parts of the body, and is most harmful when there is repeated exposure, even to small amounts. Even low levels of lead exposure can harm a child's mental development, and the problems worsen as blood-lead levels get higher.
The younger the child, the more harmful the exposure; unborn children are the most vulnerable, according to the National Institutes of Health.

Among possible complications:

- Behavior or attention problems
- Failure at school
- Hearing problems
- Kidney damage
- Reduced IQ
- Slowed body growth

Very high levels of lead may cause vomiting, a staggering walk, muscle weakness, seizures, or coma.

High amount of lead found amid Flint children while switching waters

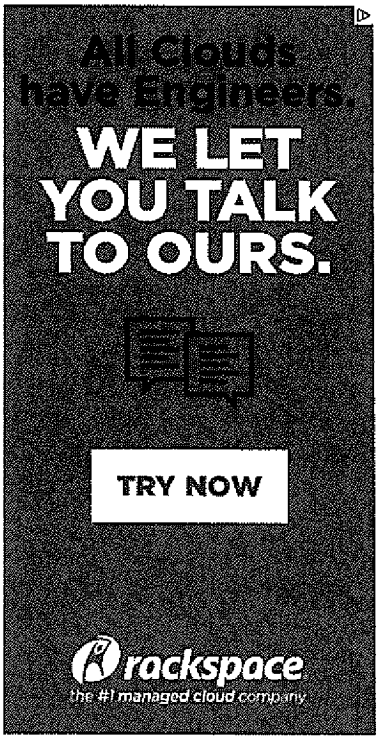
SEPTEMBER 27, 2015 BY DAVID BRYAN IN HEALTH 0 COMMENT

t's exhausting to know the resounding yawn that appears to have emanated .from the governor's workplace, following information that an growing share of Flint children have been lead poisoned after a change within the metropolis's water provide.

A spokeswoman for the Michigan Division of Well being and Human Providers despatched a Free Press knowledge analyst a chart she claimed would refute a report issued by a Hurley Medical Heart researcher, who discovered that because the metropolis began pumping water from the Flint River final April, the share of Flint youngsters with elevated blood-lead ranges has greater than doubled in some ZIP codes.

In reality, the state's information helps the Hurley researcher's declare — the variety of children with lead poisoning had been falling in Flint and throughout the state, till the water change. Now it is rising.

A spokeswoman for Gov. Rick Snyder wrote in an e-mail that the Hurley knowledge had been "spliced and diced," a suggestion that it's one thing apart from correct — though the state's personal knowledge bolsters the Hurley report.



And officers throughout the administration have hastened to insist that Flint's water is protected and to recommend that though printed reviews say Michigan Division of Environmental High quality information present elevated lead ranges in Flint's water, there's no motive to suspect that has prompted extra Flint children to undergo from lead poisoning. And thus far, none of it has it spurred them to motion.

However here is the scenario: There's extra lead in Flint's water than there was. And extra Flint youngsters have lead of their blood, one thing that results in severe, irreversible behavioral and developmental issues.

The way it occurred

The Metropolis of Flint determined in 2013 to affix the brand new Karegnondi Water Authority, together with Genesee, Sanilac and Lapeer counties. That system will not be full till 2016. Within the interim, the town — below former emergency supervisor Darnell Earley — opted to pump its water from the Flint River, as a substitute of constant to buy it from the Detroit Water and Sewerage Division — partly, state officers say, as a result of DWSD deliberate to lift its charges for a brief-time period contract. Town thought-about mixing Lake Huron and Flint River water, however finally selected to tug water from the Flint River alone. Genesee County, in distinction, will proceed to buy its water from DWSD whereas the brand new system is below building.

Researchers say that Flint River water, extra corrosive than the Lake Huron water pumped by the Detroit Water and Sewerage Division, is leaching lead from the town's ageing infrastructure into the water provide.

The town, and its residents, need assistance. Within the close to time period, residents — particularly residents with formulation-fed infants, whose diets are composed virtually fully of water — residing in poverty want help to buy bottled water or filtration programs. And town wants to think about its lengthy-time period choices, particularly, whether or not to reconnect to DWSD till the Karegnondi system is full.

That would not be a easy course of. Former Flint EM Darnell Earley, now EM for Detroit Public Colleges, wrote in an e-mailed assertion that he was not concerned within the determination to make use of river water, though it occurred throughout his tenure. He was additionally EM when a 9-mile part of pipe was bought to Genesee County, a call he wrote was within the works earlier than his appointment, which means the town cannot reconnect to the Detroit system with out the cooperation of Genesee County.

Neither is the upper value of shopping for water from DWSD — about $1.5 million a month — within the metropolis's price range, Flint Mayor Dayne Walling mentioned. The town, which emerged from state oversight this yr, would want the approval of its transitional advisory board to extend its water price range.

Flint, by the way in which, is broke.

U.S. Rep. Dan Kildee and state Senate Majority Chief Jim Ananich, each Flint Democrats, have pledged to deliver monetary and sensible help to the district.

For now, Walling mentioned, Flint's water therapy plant will start so as to add anticorrosive brokers to the Flint River water, which can take weeks to affect the water provide.

If I lived in Flint, I might be mad. If I had been a Flint mum or dad, with a little one who'd spent the final 12 months and a half ingesting lead-contaminated water, I might be in despair.

We're speaking a few public well being disaster — one that would have been prevented.

Whose fault is it?

Throughout their tenures, emergency managers are the last word authority within the cities they serve.

And so the accountability for Flint's water lies, finally, with Snyder, and the emergency managers he appointed — and it's Snyder who should come to Flint's rescue. Walling says Flint's residents want funds for instant aid, however that the town wants grants to begin to improve its growing older, lead-ridden water infrastructure.

Snyder hasn't hesitated to nominate or retain emergency managers in struggling cities throughout the state, a stance the Free Press Editorial Board has largely supported, with one caveat: Emergency managers need to make issues higher.

That's the premise on which the emergency supervisor legislation is based. Cities are the creation of the state. The state has a accountability to look after the well being and welfare of its residents, and typically, cities face challenges not fixable on the native degree. In these instances, the state should step in.

That is actually the case in Flint, which has suffered from the identical lack of inhabitants — and tax base — as Detroit, however with fewer property with which to leverage a passable consequence.

In these circumstances, the Free Press editorial board has argued, the state has a accountability to behave, to revive some fiscal stability, and thus service supply and high quality of life for residents.

That is the catch.

It would be straightforward to stability any metropolis's finances: Lay off all of the cops, promote all of the ambulances, liquidate town parks. However that would not make life higher for residents. That is the steadiness emergency managers should be conscious of — value financial savings versus high quality of life. Spending cuts versus service supply. A metropolis's backside line cannot be revenue-pushed.

That is the evident weak spot within the emergency supervisor legislation, and it on full show in Flint.

Snyder spokeswoman Sara Wurfel stated the state signed off on the swap on the behest of Walling and the Flint Metropolis Council, and solely "with severe reservations."

That is not precisely how Walling remembers it.

"I didn't assist it come what may," he mentioned. "It wasn't my resolution. I had lots of issues about it that I raised internally, however the funds was in place ... I had loads of considerations about it, however when it was determined that was the choice ... I didn't protest."

When the Flint Metropolis Council voted this 12 months to reconnect to the Detroit water system, then-emergency supervisor Jerry Ambrose known as its resolution "incomprehensible": "Water from Detroit isn't any safer than water from Flint," Ambrose stated, as reported within the Flint Journal.

It is fairly clear that is not true. It isn't clear what anybody from the State of Michigan is ready to do about it.

Sixteen months in the past, Earley and Walling celebrated the town's departure from DWSD, elevating glasses of Flint River water, ready to toss them again, with a toast that strikes a hole word at present: Here is to Flint.

Dear FOIA coordinator,

This letter is a request for records under the Freedom of Information Act, MCL 15.231 et seq.

The records I am requesting are:

1. All documents the City of Flint, or its agents, has in its possession, including correspondence, related to any waivers, permits or applications to use the Flint River as a source for water and/or drinking water for the City of Flint or any other municipality or municipal entity.
2. All documents the City of Flint, or its agents, has in its possession, including correspondence, related to any communications between the Michigan Department of Environmental Quality, or its agents, and/or the Michigan Department of Treasury, or its agents, regarding any waivers, permits or applications to use the Flint River as a source for water and/or drinking water for the City of Flint or any other municipality or municipal entity.
3. All documents the City of Flint has in its possession, including correspondence, related to any communications between the City of Flint of Treasury, or its agents, and the Office of the Governor of the State of Michigan, or its agents, regarding any waivers, permits or applications to use the Flint River as a source for water and/or drinking water for the City of Flint or any other municipality or municipal entity.

I am enclosing a check in the amount of $20 as a good faith deposit to cover a portion or all of the cost of these items. If the amount exceeds $20, please contact me by phone at 810-223-7034, to discuss the balance and the basis for the amounts charged beyond $20. If the amount is less than $20 please refund the balance to this office.

Sincerely,

Phil Phelps

FREEDOM OF INFORMATION ACT (EXCERPT)
Act 442 of 1976

Opt-Out:

15.240.amended Options by requesting person; appeal; actions by public body; receipt of written appeal; judicial review; civil action; venue; de novo proceeding; burden of proof; private view of public record; contempt; assignment of action or appeal for hearing, trial, or argument; attorneys' fees, costs, and disbursements; assessment of award; damages.
Sec. 10.
(1) If a public body makes a final determination to deny all or a portion of a request, the requesting person may do 1 of the following at his or her option:

(a) Submit to the head of the public body a written appeal that specifically states the word "appeal" and identifies the reason or reasons for reversal of the denial.

(b) Commence a civil action in the circuit court, or if the decision of a state public body is at issue, the court of claims, to compel the public body's disclosure of the public records within 180 days after a public body's final determination to deny a request.

(2) Within 10 business days after receiving a written appeal pursuant to subsection (1)(a), the head of a public body shall do 1 of the following:

(a) Reverse the disclosure denial.

(b) Issue a written notice to the requesting person upholding the disclosure denial.

(c) Reverse the disclosure denial in part and issue a written notice to the requesting person upholding the disclosure denial in part.

(d) Under unusual circumstances, issue a notice extending for not more than 10 business days the period during which the head of the public body shall respond to the written appeal. The head of a public body shall not issue more than 1 notice of extension for a particular written appeal.

(3) A board or commission that is the head of a public body is not considered to have received a written appeal under subsection (2) until the first regularly scheduled meeting of that board or commission following submission of the written appeal under subsection (1)(a). If the head of the public body fails to respond to a written appeal pursuant to subsection (2), or if the head of the public body upholds all or a portion of the disclosure denial that is the subject of the written appeal, the requesting person may seek judicial review of the nondisclosure by commencing a civil action under subsection (1)(b).

(4) In an action commenced under subsection (1)(b), a court that determines a public record is not exempt from disclosure shall order the public body to cease withholding or to produce all or a portion of a public record wrongfully withheld, regardless of the location of the public record. Venue for an action against a local public body is proper in the circuit court for the county in which the public record or an office of the public body is located has venue over the action. The court shall determine the matter de novo and the burden is on the public body to sustain its denial. The court, on its own motion, may view the public record in controversy in private before reaching a decision. Failure to comply with an order of the court may be punished as contempt of court.

(5) An action commenced under this section and an appeal from an action commenced under this section shall be assigned for hearing and trial or for argument at the earliest practicable date and expedited in every way.

(6) If a person asserting the right to inspect, copy, or receive a copy of all or a portion of a public record prevails in an action commenced under this section, the court shall award reasonable attorneys' fees, costs, and disbursements. If the person or public body prevails in part, the court may, in its discretion, award all or an appropriate portion of reasonable attorneys' fees, costs, and disbursements. The award shall be assessed against the public body liable for damages under subsection (7).

(7) If the court determines in an action commenced under this section that the public body has arbitrarily and capriciously violated this act by refusal or delay in disclosing or providing copies of a public record, the court shall order the public body to pay a civil fine of $1,000.00, which shall be deposited into the general fund of the state treasury. The court shall award, in addition to any actual or compensatory damages, punitive damages in the amount of $1,000.00 to the person seeking the right to inspect or receive a copy of a public record. The damages shall not be assessed against an individual, but shall be assessed against the next succeeding public body that is not an individual and that kept or maintained the public record as part of its public function.

)ear Mr. Phelps:

SUBJECT: Request for Disclosure of Official Files – **Executive Division and Water Resources Division**

This notice is issued in response to your request for information under the Freedom of Information Act, 1976 PA 442, as amended (FOIA), received on September 8, 2015. You have requested the following information: "Any waivers, permits or applications to use the Flint River as a source for water and/or drinking water for the City of Flint, etc." (FOIA 6422-15).

The purpose of the FOIA is to provide the public with access to existing, nonexempt public records of public bodies. Your request to examine or receive a copy of the documents described above is denied.

To the best of this public body's knowledge, information, and belief, the public record does not exist under the name given by the requester, or by another name reasonably known to the public body.

Under section 10 of the FOIA, the DEQ is obligated to inform you of the following:

1) Appeal this decision in writing to the Director of the Department of Environmental Quality, P.O. Box 30473, Lansing, Michigan 48909-7973. The writing must specifically state the word "appeal," and identify the basis for which the disclosure determination should be reversed. The Director of the DEQ, r his/her delegated designee, must respond to the appeal within 10 days of its receipt. Under unusual circumstances, the time for response to the appeal may be extended by 10 business days.

2) Commence a civil action in circuit court within 180 days after the date of the final determination to deny the request. If you prevail in such an action, the court is to award reasonable attorney fees, costs, and disbursements, and possible damages.

Susan Vorce, FOIA Coordinator
Department of Environmental Quality

Senate Activity Report | House Activity Report

Pressure Mounts On Flint Water; Snyder Prepares Actions

A coalition of Flint and state organizations asked the U.S. Environmental Protection Agency on Thursday to order a switchover of the Flint water system with the Detroit Water and Sewerage system, in what is one of the most striking actions in the controversy. The demand came as state officials plan to announce a series of actions on Flint on Friday dealing with the water problems in the city.

One legislator - who also complained he had been denied documents from the state dealing with the switch from the Detroit system to using water from the Flint River (a state official said the wrong documents had been requested) - said there had been a general discussion, but no specifics about what Mr. Snyder might announce. **Rep. Phil Phelps** (D-Flushing) said he expected the state would provide more filters to residents to help curb lead in the water. Filters will be helpful, Mr. Phelps said, but not enough.

Governor Rick Snyder will not be at the event, to be held at Kettering University, but Flint Mayor Dayne Walling, along with Environmental Quality **Director Dan Wyant**, Health and Human Services **Director Nick Lyon**, Urban Initiatives Director Harvey Hollins and the state's chief medical officer, Eden Wells, will speak on the initiatives being pursued.

The presentation will be at 1:30 p.m.at the university's Innovation Center, 1300 Bluff Street.

The controversy over the water in Flint has grown exponentially since indications that lead levels, caused mainly by antique pipes and their connections, were elevated in children who were tested. Researchers said they could not absolutely say the elevated levels were from the water, but the measures showed the increase since the city made the switch. Also on Thursday, it was announced that the city had received donations to provide some 5,000 water filters to help contain the lead.

Prior to the discovery about elevated lead levels, the controversy over the system dealt largely with the smell and taste of the water. Flint switched from using Detroit water to drawing water from the Flint River in 2014 as the city prepared to build its own system that would draw water from Lake Huron. The switch was made largely because Flint and Detroit could not agree on a short-term contract to use the water, and the city, under a state-appointed emergency manager because of financial problems, did not want to pay the cost of Detroit water.

In a press conference on Wednesday, Mr. Snyder acknowledged that in making the switch, not all factors were probably considered.

The request for the EPA to order both the city and state to make the switch to Detroit water came with a variety of city and state groups, including the Concerned Pastors for Social Action, the Flint Water Study

Team, the Michigan Nurses Association, the NAACP-Michigan State Conference, the Natural Resources Defense Council and the Michigan branch of the American Civil Liberties Union, getting involved.

The request charged that neither the state nor Flint were doing enough to fix the problem and urged that both be ordered to immediately have Flint's water system reconnected with the Detroit system, and that city residents be provided with a free source of water that meets EPA standards.

Mr. Phelps, meanwhile, complained that the Department of Environmental Quality denied and the Department of Treasury ignored a Freedom of Information Act request for documents related to the city's switch from Detroit water to river water. Anytime there is a change in water systems of the course of water, the community has to apply to the state for that authority.

But Brad Wurfel, with the DEQ, said Flint did not have to file that application because the city had always listed the Flint River as its back-up should it need it for a water supply.

However, there are other documents that are available - to Mr. Phelps or anyone - dealing with the process the city and state took preparing for the switch, Mr. Wurfel said.

Mr. Phelps said a DEQ official contacted him and said there were documents available and that they would be sent to him. The official asked that he drop his FOIA request, Mr. Phelps said.

On the advice of his lawyers, Mr. Phelps said he did not drop the request. But he had also asked the department for any documents that might have to do with the switch. After his request was denied, he received several documents dealing with the system, but the documents were from 2007 and did not have to do with the switch.

Mr. Phelps was surprised by the refusal and was planning what steps to next take.

In terms of what the state should do to help in the situation, Senate **Minority Leader Jim Ananich** (D-Flint) told reporters after session on Thursday that he thought the state should first help with distributing filters to residents, especially those who may be most vulnerable, listing pregnant women, children, women that are nursing, those with immune system issues and the elderly among them.

"That should be done immediately," Mr. Ananich said. "I think we need to have corrosion control put in place as quickly as possible. Unfortunately, I think we need some independent, outside testers to come in and develop the confidence level that's just not there with traditional people in place. And I think we need to have a serious look at reconnecting with Detroit. I think the state needs to help us find a new source of water."

He said he would reserve judgment about how well the state has responded to the situation until after the administration makes its recommendations and remains unsure about any estimates on how much it might cost for Flint to reconnect to Detroit water.

"There's been some negotiations going on at the local level, but I think it's important to get the real cost because it's a public health issue. And I'm hopeful we'll find that. I would hope that all folks, with an issue of this magnitude, would not try to gouge a community that's been suffering the way they are," Mr. Ananich said. "I think we need to all, at the state level, make sure people are negotiating in good faith."

And Senate **Majority Leader Arlan Meekhof** (R-West Olive) said he is unsure what the state's role should be in terms of helping Flint. The Senate did, on Thursday, include a $100 placeholder to deal with Flint's water

crisis in an appropriations supplemental it passed, but that was to keep the conversation going, Mr. Ananich said (see separate story).

"I don't know that we really have a solution there yet," Mr. Meekhof said after session. "We could use revolving funds maybe. I don't think the city of Flint is in as bad of financial trouble as the city of Detroit, so if they need to bond for something, they would have assets with which to bond and maybe fix the problem. There's lots of options that are out there."

STATE OF MICHIGAN
DEPARTMENT OF TREASURY
LANSING

RICK SNYDER
GOVERNOR

NICK A. KHOURI
STATE TREASURER

September 29, 2015

Mr. Phil Phelps
819 Main Street
Unit A
Flushing, MI 48433

Dear Mr. Phelps:

This notice is issued in response to your request dated September 4, 2015, which you submitted under the Freedom of Information Act (FOIA), MCL 15.231 *et seq*. Your request was received in the Department of Treasury (Department) by electronic mail on September 8, 2015. As set forth in the Department's September 15, 2015 notice, a statutory extension of time to respond was taken through September 29, 2015.

You have requested records which you describe as: 1) All documents the Michigan Department of Treasury, or its agents, has in its possession, including correspondence, related to any waivers, permits or applications to use the Flint River as a source for water and/or drinking water for the City of Flint or any other municipality or municipal entity; 2) All documents the Michigan Department of Treasury, or its agents, has in its possession, including correspondence, related to any communications between the Michigan Department of Environmental Quality, or its agents, and the Michigan Department of Treasury, or its agents, regarding any waivers, permits or applications to use the Flint River as a source for water and/or drinking water for the City of Flint or any other municipality or municipal entity; 3) All documents the Michigan Department of Treasury has in its possession, including correspondence, related to any communications between the Michigan Department of Treasury, or its agents, and the Office of the Governor of the State of Michigan, or its agents, regarding any waivers, permits or applications to use the Flint River as a source for water and/or drinking water for the City of Flint or any other municipality or municipal entity.

To the extent we understand your description, your request is denied. After a thorough search of Department records, to the best of the undersigned's knowledge, information and belief, no such records as you describe, or by any other name reasonably known to the Department, regarding any "waivers, permits or applications to use the Flint River as a source for water and/or drinking water for the City of Flint or any other municipality or municipal entity," exist in the Department of Treasury.

Opt-Out:

In an effort to be cooperative, you may wish to contact the Department of Environmental Quality as they may have records responsive to your request.

As to the denial of your FOIA request, the Department is obligated to inform you that under section 10 of the FOIA, MCL 15.240 you may do the following:

1. Appeal this decision in writing to the State Treasurer, Michigan Department of Treasury, P.O. Box 30716, Lansing, MI 48909. The writing must specifically state the word "appeal" and must identify the reason or reasons you believe the denial should be reversed. The Department must respond to your appeal within 10 days of its receipt. Under unusual circumstances, the time for response to an appeal may be extended by 10 business days.

2. File an action in the appropriate court within 180 days after the date of the final determination to deny the request. If you prevail in such an action, the court is to award reasonable attorney fees, costs, and disbursements, and possible damages.

Pursuant to section 4 of the FOIA, MCL 15.234, the Department's FOIA procedures, guidelines and written summary can be found on the Department's website at the following link: http://michigan.gov/treasury/0,4679,7-121-72699-357926--,00.html.

Sincerely,

Carla M. Robert

Gary –

I believe the DEQ team can best address this one. Have you already reached out to them? Please let me know and I'll follow up accordingly.

Being transparent and fulfilling FOIA requests is something our administration take very seriously.

Hi,
I wanted to see if the state had any comment in response to this lawsuit.

Thanks.

Rep. Phelps Files Suit Against State of Michigan, City of Flint

State, city failed to release documents sought in FOIA request

LANSING — State Representative **Phil Phelps** (D-Flushing) announced earlier today that he is filing suit against the state of Michigan and the city of Flint to force them to release public documents he requested last month under the Freedom of Information Act (FOIA).

"It's an absolute shame that I have to file suit to force our government to comply with the law," Phelps said. "I was shocked at their response, because prior to receiving the denials, officials from both the city and state had told me that not only did documents exist, but they would be happy to share them with me."

On Sept. 4 of this year, Phelps requested that the city and state turn over all documents and emails regarding the permit and application process that Flint's emergency manager was required to complete before the Michigan Department of Environmental Quality gave the go ahead to the city to start using the Flint River as its source of drinking water. Late last month, the state and the city both denied Phelps' request, saying that no such documents exist.

In March and April of 2014, officials from both the city and state were also quoted in several articles on Mlive.com, making comments about the permit application process for Flint to switch its source of drinking water from Detroit's system to the Flint River.

"I want to know what these officials knew about the safety and quality of the river water before the switch was made. Judging by their response and recent actions, it almost seems they knew a lot more than they are letting on to," Phelps said. "Flint residents deserve better than this, they deserve to know the truth about the decisions that were made, and if I have to fight this in court to get the truth, so be it."

Attachments: DWSD Termination Letter.pdf

My comments are several fold, Ron. This switch to KWA as well as using the community's long-time back-up water supply (Flint River) was pushed or supported by the city and community and that DWSD was terminating Flint from its system (see attached letter again just in case) necessitating another source. We also know Darnell cares deeply about the kids and communities he serves. We're focused on solving this challenging infrastructure issue, moving forward quickly and doing everything we can to ensure that Flint has safe drinking water and protecting public health – both in the immediate short-term, mid-term and long-term. We're also going to be conducting a full after action review.

MDP Statement: Those Responsible for Flint Water Crisis Must Be Held Accountable

LANSING – The Michigan Democratic Party issued the following statement today, on behalf of Party Chair Brandon Dillon, demanding those responsible for the Flint water crisis be held accountable and calling on Governor Snyder to immediately fire former Flint EM, and current EM for Detroit Public Schools, Darnell Earley:

"Accountability in government means answering to the people you serve, not just cleaning up your mistakes using their money," said Brandon Dillon, Chair of the Michigan Democratic Party.

"This catastrophe began with the governor's appointed emergency manager, and as much as Governor Snyder would like to pretend, this is not a matter of negotiating at the boardroom table. This is a situation where you pay for your mistakes and put those responsible on the chopping block.

"That is why we are calling for the immediate firing of the governor's handpicked emergency manager for Flint, Darnell Earley. Earley was in charge when the decision was made to switch the city to unsafe drinking water. If poisoning children wasn't bad enough, after Earley failed the citizens of Flint, the governor inexplicably rewarded him with another appointment – emergency manager for Detroit Public Schools – where he is now responsible for the education of nearly 50,000 students.

"The children of Flint and Detroit are being robbed of what most of us take for granted – safe drinking water and a quality education. The wholesale theft of our children's futures must end now. That begins with the removal from power all those that would sacrifice the future of a single child in Michigan – let alone thousands – in order to add a few extra dollars to the bottom line."

Dear Ms. Brown:

Regarding: Termination of Contract for the Provision of Water Services by the City of Detroit, Water and Sewerage Department

On December 20, 1965, the City of Detroit, through its Board of Water Commissioners, (DWSD) and the City of Flint, Michigan (Flint) entered into a contract for the provision of DWSD treated water to Flint and the distribution by flint of that water to other Genesee County communities. Section 18 of that Agreement[1] provides:

18. The Board [DWSD] shall supply and sell water to the City [Flint] from the water system of the City of Detroit, and the City shall receive and purchase such water in accordance with the terms of this Agreement for an indefinite period of time but at least for a period of thirty-five (35) years from the date hereof. This Agreement may be terminated by either party after expiration of said 35-year period, upon one year's written notice served upon the other party by delivering the same to the Secretary of the Board or to the Clerk of the City as the case may be, or at any time upon mutual consent of both parties.

Please take notice that pursuant to this section, 18, of the above-referenced Agreement, DWSD is terminating this Agreement one year from today's date (April 17, 2014).

Sincerely yours,

Sue F. McCormick
Director

[1] Although the Agreement between DWSD has been subsequently amended, Section 18 remains unchanged and in full effect.
